

Central University of Punjab

Course Structure and Syllabus

M.Sc. Chemistry

Batch 2024-26

**Department of Chemistry
School of Basic Sciences**

Graduate Attributes

Graduate attributes are the understanding, skills, and qualities that Department of Chemistry along with CUPB community agrees with where the M. Sc. Chemistry students should develop these characteristics during the time spent in the institution.

The Graduates will be able to identify various aspects of chemicals and their importance in consumer products. After completing M.Sc. in Chemistry, the graduates will have comprehensive knowledge and understanding of all the domains of Chemical Sciences, for application in multidisciplinary environments including biological, chemical and physical sciences. They will have sufficient expertise in problem solving by applying critical, creative and evidence based thinking to conceive innovative responses to future challenges.

They will engage in professional behavior and have entrepreneurial potential and will be able to take leadership roles in their occupations, careers and community with ethical behavior. They will be able to contribute to multicultural, IT revolutionized and sustainable society/policy with the attributes of global citizens. Moreover, this program will help the graduates to make their bright career in academic, research, and industry.

Examination pattern and evaluation for Masters' students

Formative Evaluation: Internal assessment shall be 25 marks using any two or more of the given methods: tests, open book examination, assignments, term paper, etc. The Mid-semester test shall be descriptive type of 25 marks including short answer and essay type. The number of questions and distribution of marks shall be decided by the teachers.

Summative Evaluation: The End semester examination (50 marks) with 70% descriptive type and 30% objective type shall be conducted at the end of the semester. The objective type shall include one-word/sentence answers, fill-in the blanks, MCQs', and matching. The descriptive type shall include short answer and essay type questions. The number of questions and distribution of marks shall be decided by the teachers. **Questions for exams and tests shall be designed to assess course learning outcomes along with focus on knowledge, understanding, application, analysis, synthesis, and evaluation.**

The evaluation for IDC, VAC and entrepreneurship, innovation and skill development courses shall include MST (50 marks) and ESE (50 marks). The pattern of examination for both MST and ESE shall be same as ESE described above for other courses.

Evaluation of dissertation proposal in the third semester shall include 50% weightage by supervisor and 50% by HoD and senior-most faculty of the department. The evaluation of dissertation in the fourth semester shall include 50% weightage for continuous evaluation by the supervisor for regularity in work, mid-term evaluation, report of dissertation, presentation, and final viva-voce; 50% weightage based on average assessment scores by an external expert, HoD and senior-most faculty of the department. Distribution of marks is based on report of dissertation (30%), presentation (10%), and final viva-voce (10%). The external expert may attend final viva-voce through offline or online mode.

Examination pattern

Core, Discipline Foundation Courses	Elective, and	Compulsory	IDC, VAC, and Entrepreneurship, Innovation and Skill Development Courses	
	Marks	Evaluation	Marks	Evaluation
Internal Assessment	25	Various methods	-	-
Mid-semester test (MST)	25	Descriptive	50	Descriptive (70%) Objective (30%)
End-semester exam (ESE)	50	Descriptive (70%) Objective (30%)	50	Descriptive (70%) Objective (30%)

Dissertation Proposal (Third Semester)			Dissertation (Fourth Semester)		
	Marks	Evaluation		Marks	Evaluation
Supervisor	50	Dissertation proposal and presentation	Supervisor	50	Continuous assessment (regularity in work, mid-term evaluation) dissertation report, presentation, final viva-voce
HoD and senior-most faculty of the department	50	Dissertation proposal and presentation	External expert, HoD and senior-most faculty of the department	50	Dissertation report (30), presentation (10), final viva-voce (10)

Marks for internship shall be given by the supervisor, HoD and senior-most faculty of the department.

Some Guidelines for Internal Assessment

1. The components/pattern of internal assessment/evaluation should be made clear to students during the semester.
2. The results of the internal assessment must be shown to the students.
3. The question papers and answers of internal assessment should be discussed in the class.
4. The internal assessment shall be transparent and student-friendly and free from personal bias or influence.

Course Title: Fundamental Biology (Non-medical group)

Paper Code: CHM.506

Total Contact Hours: 45

L	T	P	Cr
3	0	0	3

Learning Outcome: After this course completion, students will be able to

- CLO1:** Interpret molecular structure and interactions present in proteins, nucleic acids, carbohydrates and lipids.
- CLO2:** Demonstrate the organization and working principles of various components present in the living cell.
- CLO3:** Apply the knowledge of Physical principles of structure, function, and folding of biomolecules.

Units/ hours	Content	Mapping with CLOs
Unit-1 11 Hours	<p>Introduction: Cell structure and functions, thermodynamics and kinetics of biological processes, ATP. Role of water in life, pH, Acidic and basic buffers, Biological buffers, solution equilibria, Henderson-Hasselbalch equation, Hofmeister series, Chaotropic and kosmotropic ions/co-solvents.</p> <p><i>Peer discussion on role of buffers in Biological system and stability of drug formulations</i></p>	CLO1, CLO2
Unit-2 11 Hours	<p>Amino Acids and Peptides: Classification and properties of amino acids, peptide and polypeptides, primary structures, structure of peptide bond, synthesis of peptides, different protecting groups in peptide chemistry, N-terminal, C-terminal and sequence determination.</p> <p>Carbohydrates: Biologically important monosaccharides, disaccharides and polysaccharides and glycoproteins.</p> <p><i>Importance of peptides and carbohydrates in the context of biology through peer learning</i></p>	CLO2
Unit-3 11 Hours	<p>Proteins: Secondary structure of proteins with emphasize on supramolecular characteristics of alpha-helix, beta-helix, tertiary structure of protein-folding, quaternary structure of protein, in-vivo and in-vitro protein folding, protein misfolding and conformational diseases.</p> <p><i>Secondary, tertiary and quaternary structure of Proteins: Classroom debate</i></p>	CLO3
Unit-4 12 Hours	<p>Nucleic Acids: Purine and pyrimidine bases, nucleotides, nucleosides, base pairing via H-bonding, structure of ribonucleic acids (RNA) and deoxyribonucleic acids (DNA), double helix model of DNA, different types of RNA and their functions, the chemical basis for heredity.</p> <p>Lipids: Lipid classification, lipid bilayers, lipoproteins-composition. High density (HDL) and low-density (LDL) lipoproteins and function.</p> <p><i>3D structures of DNA, RNA: Peer discussion</i></p>	CLO1, CLO2, CLO3

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

Course Title: Fundamental Mathematics

Paper Code: CHM.507

Total Contact Hours: 45

L	T	P	Cr
3	0	0	3

Learning Outcome: The students will be able to

CLO1: Interpret and apply the graphical representation of various complex, quadratic trigonometric and logarithmic functions.

CLO2: Recognize and apply the series, sequence and Binomial expansions in various chemical applications.

CLO3: Apply the physical understanding of differential calculus for functions and their graphical behaviour.

CLO4: Demonstrate and apply the various mathematical operations including matrix operations, differentiation, integration, and differential equations for common problems in chemistry.

CLO5: Demonstrate and apply the statistical methods in experimental evaluations in chemistry.

Units/ hours	Content	Mapping with CLOs
Unit 1 11 Hours	<p>Trigonometric functions: Trigonometric operations for sum and differences of angles, addition and subtraction formulas.</p> <p>Algebra: Polynomial equations and their solutions: binomial theorem and expansion. Common series and expansions used in chemistry.</p> <p>Complex Algebra: Complex numbers, the graphical interpretation of complex numbers, characterizations of the exponential function, the trigonometric functions of complex argument (e^{iq}, e^{-iq}).</p> <p><i>Peer discussion on the functions and their characteristics graphical behaviours</i></p>	CLO1, CLO2
Unit 2 12 Hours	<p>Differential Calculus</p> <p>Functions, limits, continuity, first principle of differentiation, basic rules of differentiation, maxima and minima, exact and inexact differentials, partial differentiation, application to solution of potential energy, van der Waals radii, velocity and Boltzmann distribution.</p> <p>Matrix Algebra: Addition and multiplication; inverse, adjoint and transpose of matrices, matrix equation, Introduction to vector spaces, matrix Eigenvalues and Eigenvectors, diagonalization, determinants (examples from Huckel theory).</p> <p><i>Problem solving approach and revisiting problems in chemistry at undergraduate level quantum chemistry on matrix based solutions.</i></p>	CLO3, CLO4
Unit 3 11 Hours	<p>Integral Calculus</p> <p>Basic rules for integration, integration by parts, partial fraction and substitution, definite integrals, evaluation of definite and some standard integrals related to chemistry</p> <p>Elementary Differential Equations: Variables-separable and exact, first-order differential equations, homogenous, exact and linear equations. Applications to chemical kinetics, quantum chemistry, etc. solutions of differential equations by the power series method, spherical harmonics, second order differential equations and their solutions.</p> <p><i>Brainstorming and Problem solving approach for integral calculus and differential equations in chemistry related problems</i></p>	CLO4

Unit 4 11 Hours	<p>Basic Statistics: Measures of central tendency and dispersal, Histograms, Probability distributions (Binomial, Poisson and Normal), Sampling distribution, Kurtosis and Skewness. Confidence interval, Errors, Levels of significance, Hypothesis testing.</p> <p>Comparing means of two or more groups: Student's t-test, Paired t-test, Mann-Whitney U-test, Wilcoxon signed-rank, One-way and two-way analysis of variance (ANOVA), χ^2 test.</p> <p>Regression and correlation: Standard errors of regression coefficients, Comparing two regression lines.</p> <p><i>Peer discussion of the significance of linear regression to chemistry and hypothesis testing.</i></p>	CLO5

Course Title: Inorganic Chemistry - I

Paper Code: CHM.509

Total Contact Hours: 45

Learning Outcome: On completion of this course the student's will able to

CLO1: Reaction mechanism, formation constant and stability of the coordination complexes.

CLO2: Interpret the electronic properties.

CLO3: Interpret the magnetic properties

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 10 Hours	<p>Metal-Ligand Equilibria in Solution: Stepwise and overall formation constant and their interaction, trends in stepwise constants, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand, chelate effect and its thermodynamic origin, determination of formation constants by spectrophotometry and potentiometric (pH) methods.</p> <p><i>Group Discussion among the students on the stability of metal complex formation</i></p>	CLO1
Unit-2 10 Hours	<p>Reaction Mechanisms of Transition Metal Complexes: Introduction, potential energy diagram and reactivity of metal complexes, ligand substitution reactions, labile and inert metal complexes, acid hydrolysis, factors affecting acid hydrolysis, base hydrolysis, conjugate base mechanism, anation reaction, substitution reactions in square planar complexes, trans effect, mechanism of the substitution reaction reactions without metal ligand bond cleavage, electron transfer processes outer and inner sphere.</p> <p><i>Demonstration of reactions mechanism of metal complexes.</i></p>	CLO1
Unit-3 15 Hours	<p>Electronic Absorption spectra of Metal Complexes: Ligand field theory, nephelauxetic effect, Jahn-Teller effects, spin orbital (LS) coupling, LS and J-J coupling schemes, determination of all the spectroscopic terms of p^n, d^n, f^n ions, determination of total degeneracy of terms, order of interelectronic repulsions and crystal field strength in various fields, spin orbit coupling parameters (ζ) energy separation between different j states, the effect of octahedral and tetrahedral fields on S, P, D and F terms. selection rules of electronic transitions, relaxation of the selection rule in centrosymmetric and non-centrosymmetric molecules, Orgel diagrams, Tanabe Sugano diagrams, spectrochemical series, band intensities, factors influencing band widths.</p> <p><i>Classroom discussion on interpretation of LS coupling and various energy level diagrams through brainstorming</i></p>	CLO2
Unit-4 10 Hours	<p>Magnetic properties: magnetic properties of transition metal complexes, effects of L-S coupling on magnetic properties, quenching of orbital angular momentum by crystal fields in complexes in terms of splitting, temperature independent paramagnetism (TIP).</p> <p><i>Hands-on experience of metal complexes for magnetic properties by using Gouy's Balance.</i></p>	CLO3

Course Title: Organic Chemistry-I

Paper Code: CHM.510

Total Contact Hours: 45

Learning Outcome: After the completion of the course students will be able to

CLO1: Identify various methods and intermediate species involved while determining the mechanism of organic reactions.

CLO2: Examine the mechanistic and synthetic aspects of nucleophilic, electrophilic substitution and elimination reactions.

CLO3: Explore the implications of enolate chemistry for the synthesis of various molecules.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 11 Hours	<p>Reaction mechanism, structure and reactivity: Classification and determination of reaction mechanisms, kinetic and thermodynamic control, Hammond's postulate, Curtin-Hammett principle, methods of determining mechanisms, isotope effects, effect of structure on reactivity: Hammett equation, Taft equation.</p> <p>Reactive intermediates: Generation, structure and reactions of carbocations, carbanions, free radicals, carbenes, nitrenes and benzyne. Neighbouring group participation, classical and non-classical carbocations, phenonium ions and norbornyl system.</p> <p>Aromaticity: Aromaticity in benzenoid and non-benzenoid compounds, antiaromaticity and homoaromatic compounds.</p> <p><i>Peer Discussion on stability of the intermediates in the presence of different substituents (electron-withdrawing and electron releasing)</i></p> <p><i>Classroom discussion on various tools used for the determination of reaction mechanism</i></p>	CLO1
Unit-2 11 Hours	<p>Aliphatic nucleophilic substitution reaction: The S_N^2, S_N^1, mixed S_N^2 and S_N^1, the S_N^i and SET mechanism. Energy profile diagram, nucleophilic substitution at an allylic, aliphatic and vinylic carbon reactivity effects of substrate structure, attacking nucleophile, leaving group and reaction medium, ambident nucleophile, regioselectivity, effect of solvent in substitution reaction, competition between S_N^2 and S_N^1 mechanisms, ion pair theory.</p> <p>Aromatic nucleophilic substitution: The S_N^{Ar}, bimolecular displacement mechanism and benzyne mechanism, reactivity effect of substrate structure, leaving group and attacking nucleophile.</p> <p>Aromatic electrophilic substitution: The arenium ion mechanism, orientation and reactivity, energy profile diagrams, <i>ortho/para</i> ratio, <i>ipso</i> attack.</p> <p><i>Demonstration of substitution reactions with the help of ball and stick models</i></p> <p><i>Peer discussion on the role of substituents in electrophilic and nucleophilic substitution reaction</i></p>	CLO2

Unit-3 11 Hours	<p>Elimination reactions: E2, E1 and E1cB mechanisms and their spectrum, orientation of the double bond, effects of substrate structures, attacking base, the leaving group and the medium, mechanism and orientation in pyrolytic elimination.</p> <p>Addition to carbon-carbon multiple bonds: Mechanistic and stereochemical aspects of addition reactions involving electrophiles, nucleophiles and free radicals, addition of halogen polar reagents to alkenes, Regio- and chemoselectivity, orientation and reactivity, hydroboration, epoxidation and hydroxylation.</p> <p><i>Demonstration of elimination reactions with the help of ball and stick models</i></p> <p><i>Addition of different reactive intermediates to alkenes and alkynes through peer learning</i></p>	CLO2
Unit-4 12 Hours	<p>Addition to carbon-hetero multiple bonds: Structure and reactivity of carbonyl group towards nucleophilic addition: addition of CN, ROH, RSH, H₂O, hydride ion, ammonia derivatives, LiAlH₄, NaBH₄, organozinc and organolithium reagents to carbonyl and conjugated carbonyl compounds, Arndt-Eistert synthesis. Mechanism of condensation reactions involving enolates: Aldol, Knoevenagel, Claisen, Dieckmann, Mannich, Benzoin, Perkin and Stobbe reactions. Carboxylic acids and derivatives, hydrolysis of esters and amides, ammonolysis of esters.</p> <p><i>Peer discussion of the mechanism of nucleophilic additions to carbonyl, nitrile, thiocarbonyl, carboxylic acids, esters and amides</i></p> <p><i>Mechanistic interpretation of C-C, C-N and C-O bond formation reactions through brainstorming</i></p>	CLO3

Paper Code: CHM.511

Total Contact Hours: 45

Learning Outcome: After the completion of the course students will be able to

L	T	P	Cr
3	0	0	3

- CLO1:** Interpret and solve the Schrodinger equation for various systems, particle in a boundary model, Electronic and Hamiltonian operators for molecules.
- CLO2:** Explain the quantum chemical description of angular momentum and term symbols for a one and many-electron systems.
- CLO3:** Relate the Born-Oppenheimer approximation, the Pauli principle, Hund's rules, Hückel theory and the variation principle with the atomic and molecular phenomena.
- CLO4:** Explain the statistical aspects of system and relate the classical thermodynamics to quantum mechanics.
- CLO5:** Apprehend and apply partition function in the deduction of thermodynamic properties of chemical systems.

Units/ hours	Content	Mapping with CLOs
Unit 1 11 Hours	<p>Fundamental Background: Review of essential mathematical concepts required for quantum chemistry, Postulates of quantum mechanics, Eigen values and Eigen functions, operators, Schrodinger equation.</p> <p>Translational, Rotational and Vibrational Motions: - Free particle and particle in a box and its application, one-dimensional harmonic oscillator and rigid rotor, particle in a ring, particle on a sphere.</p> <p><i>Problem solving approach to determine Eigen values and Eigen function using corresponding operator and Schrodinger equation. Brainstorming on defining and solving Schrodinger equation for different systems like particle in a box, rigid rotator, simple harmonic oscillator.</i></p>	CLO1
Unit 2 11 Hours	<p>Angular Momentum: Ordinary angular momentum, generalized angular momentum, Eigen functions and Eigen values for angular momentum, Ladder operator, addition of angular momenta, spin, antisymmetry and Pauli exclusion principle, Slater determinantal wave functions.</p> <p>Electronic Structure of Atoms: Electronic configuration, term symbols and spectroscopic states, Russell-Saunders terms and J-J coupling schemes, Magnetic effects: spin-orbit coupling and Zeeman splitting.</p> <p><i>Understanding multi-electron atom quantum evaluation through peer discussion and brainstorming sessions.</i></p>	CLO2, CLO3

Unit 3 12 Hours	<p>Variation Methods: The variation theorem and its application, linear variation principle.</p> <p>Born-Oppenheimer Approximation: LCAO-MO and VB treatments of the H_2^+ and H_2, Shape of molecules, Hybridization and valence MOs of H_2O and NH_3. Determination of bond angle in sp^3, sp^2 and sp, Huckel Theory of acyclic and cyclic conjugated systems, Bond order and charge density</p> <p><i>Application of Variation method and its uses in pi-HMO theory for acyclic and cyclic conjugated organic systems through peer learning. Application of MOT and VBT for H_2 and H_2^+ system through demonstration.</i></p>	CLO4
Unit 4 11 Hours	<p>Classical Thermodynamics and Phase Transitions: Partial Molar Properties, Gibbs- Duhem equation, Chemical potential of liquids, Phase transition: Clausius-Clapeyron equation.</p> <p>Statistical Thermodynamics: Statistical concepts and examples, Thermodynamic probability and entropy,</p> <p>Partition function, molar partition function, thermodynamic properties in terms of the molecular partition function for monoatomic gases, rotational, translational, vibrational, and electronic partition functions for diatomic molecules, calculation of equilibrium constants in terms of the partition function.</p> <p><i>Partition function and its correlation to classical thermodynamic evaluation through brainstorming session and peer learning</i></p>	CLO5

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming

Course Title: Spectroscopic Analysis

Paper Code: CHM.524

Total Contact Hours: 45

L	T	P	Cr
3	0	0	3

Learning Outcome: At the end of this course student will be able to

CLO1: Identify various spectroscopic techniques (UV, IR, NMR and MS) used in organic synthesis for structure elucidation.

CLO2: Predict NMR spectra and various fragment-ions/peaks in MS of a given molecular structure.

CLO3: Analyze and interpret the combined spectroscopic data (UV-Vis, IR, ^1H & ^{13}C NMR) for structural elucidation of unknown organic molecules.

Units/ hours	Content	Mapping with CLOs
Unit-1 11 Hours	<p>UV-Visible spectroscopy: Introduction, role of solvents, chromophores and their interaction with UV-visible radiation. Woodward-Fieser rule for conjugated dienes and carbonyl compounds</p> <p>Infrared spectroscopy: Infrared radiation and its interaction with organic molecules, vibrational mode of bonds, effect of hydrogen bonding and conjugation on absorption bands, interpretation of IR spectra. FTIR.</p> <p><i>Problem solving - Identification of the structure from the given UV and FTIR data</i></p>	CLO1
Unit-2 12 Hours	<p>Nuclear magnetic resonance spectroscopy: Introduction, chemical shift and factors influencing chemical shift, reference standards and solvents. spin-spin coupling, coupling constants, long range coupling, effect of deuteration, integration of signals, interpretation of spectra, spin decoupling, double resonance and shift reagent methods, resonance of other nuclei e.g. ^{19}F, ^{15}N, ^{31}P.</p> <p><i>The role of external magnetic field on precessional frequency: Peer discussion</i></p>	CLO1, CLO2
Unit-3 11 Hours	<p>^{13}C NMR: Introduction, Proton coupled and proton decoupled ^{13}C NMR, nuclear overhauser enhancement (NOE), DEPT techniques, 2D NMR Correlation spectroscopy (COSY), Homo COSY (^1H-^1H COSY), Hetero COSY (^1H-^{13}C COSY, HMQC), long range ^1H-^{13}C COSY (HMBC), NOESY.</p> <p><i>Problem solving - Identification of the structure from the given ^1H and ^{13}C NMR data</i></p>	CLO1, CLO2, CLO3
Unit-4 11 Hours	<p>Mass spectrometry: Basic principles and brief outline of instrumentation. Ion formation: EI, CI, FAB, MALDI, ESI, metastable ion, α-cleavage, McLafferty rearrangement, Retro-Diels-Alder cleavage, nitrogen rule, fragmentation process of organic molecules in relation to molecular structure determination. Relative abundance of isotopes, High resolution mass spectrometry (HRMS) and recent advances in mass spectrometry.</p> <p>Problems for structure elucidation using the above spectroscopic techniques.</p> <p><i>Interpretation of various fragmentation peaks in the mass spectrum of the given sample</i></p>	CLO1, CLO2, CLO3

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming

Course Title: Practical Inorganic Chemistry

Paper Code: CHM.513

Contact Hours: 60

Learning Outcome: The students will be able to

CLO1: Perform volumetric and gravimetric analysis of cations and anions within reaction mixtures.

CLO2: Standardize and titrate various inorganic compounds.

Experiments:

Introduction to good laboratory practices in chemistry.

Gravimetric Estimation

1. Determination of Ba^{2+} as its sulphate/chromate.
2. Estimation of lead as its lead sulfate.
3. Estimation of Nickel (II) as its nickel dimethyl glyoximate.
4. Estimation of Cu^{2+} as cuprous thiocyanate.

Precipitation Titrations

1. AgNO_3 standardization by Mohr's method.
2. Volhard's method for Cl^- determination.

Oxidation-Reduction Titrations

1. Standardization of KMnO_4 with sodium oxalate and determination of Ca^{2+} ion.
2. Standardization of ceric sulphate with Mohr's salt and determination of Cu^{2+} , NO_2 and $\text{C}_2\text{O}_4^{2-}$ ions.
3. Standardization of $\text{K}_2\text{Cr}_2\text{O}_7$ with Fe^{2+} and determination of Fe^{3+} (Ferric alum)

L	T	P	Cr
0	0	4	2

- Standardization of hypo solution with potassium iodate / $K_2Cr_2O_7$ and determination of available Cl_2 in bleaching powder, Sb^{3+} and Cu^{2+} .
- Determination of hydrazine with KIO_3 titration.

Mode of Transactions: Demonstration, PPT, videos, Lecture cum demonstration

Course Title: Practical Organic Chemistry

Paper Code: CHM.514

Total Contact Hours: 60

Learning Outcome: At the end of this course student will be able to

- CLO1:** Exercise good laboratory practices including safe handling of hazardous chemicals, laboratory glassware and equipment(s).
- CLO2:** Apply various experimental skills for purification, isolation and recrystallization of organic molecules.
- CLO3:** Analyze the progress of a given reaction on thin layer chromatography.

Experiments:

Safety and Handling of hazardous chemicals:

- Good laboratory practices, handling and disposal of hazardous chemicals.
- Awareness about different types of glassware, heating devices, equipment(s), how to conduct organic reaction etc.

A. Techniques:

Chromatography: Thin layer chromatography (TLC): Monitoring the progress of chemical reactions, R_f values: identification of unknown organic compounds by comparing the R_f values with known standards. Column chromatography.

Purification Techniques: crystallization, distillation, sublimation.
Determination of melting point and mixed melting point.

B. Single Stage Synthesis: Synthesis of compounds and their purification, aspects such as conversion, theoretical yield and percentage yield should be paid attention. (Attempt any six)

1. Synthesis of chalcones *via* Claisen-Schmidt condensation.
2. Reduction of benzophenone to benzhydral using NaBH₄.
3. Conversion of benzaldehyde to cinnamic acid (Knoevenagel condensation)
4. Conversion of benzaldehyde to dibenzylidene acetone (Aldol condensation)
5. To prepare phenylpropene *via* dehydration of corresponding phenylpropanol.
6. To prepare ethyl cinnamate *via* acid catalyzed esterification of cinnamic acid.
7. Conversion of phthalic anhydride to phthalimide
8. To synthesize arylidene analogue of Meldrum acid.
9. Synthesis of alcohol *via* addition of Grignard reagent to an aldehyde.

Mode of Transactions: Demonstration, PPT, videos, Lecture cum demonstration

Course Title: Inorganic Chemistry-II

Paper Code: CHM.521

Total Contact Hours: 45

Learning Outcome: The students will able to

CLO1: Concepts to realize point group within chemical structure, character tables and projection operator techniques.

CLO2: Application of symmetry and group theory in spectroscopy.

CLO3: Structural properties of organometallic complexes and their uses.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 10 Hours	Symmetry: Symmetry elements, symmetry operations and their matrix representation, group postulates and types, multiplication tables, point group determination. <i>Basic discussion about types of symmetry and parameters to decide point groups in different molecules using of ball and stick models</i>	CLO1
Unit-2 10 Hours	Group theory: Determination of reducible and irreducible representations, character tables, construction of character tables for C _{2v} , C _{3v} , use of symmetry in obtaining symmetry of orbitals in molecules. <i>Group discussion to design the character tables of taking molecular examples and implication of ball and stick model tools.</i>	CLO2
Unit-3 15 Hours	Metal Complexes: Organic-transition metal chemistry, complexes with π -acceptor and σ -donor ligands, 18-electron and 16-electron rules, isolobal analogy, Synthesis and important reaction of metal carbonyls. Structure and bonding of metal carbonyls, metal nitrosyl, dinitrogen and dioxygen complexes, tertiary phosphine as ligand and vibrational spectra of metal carbonyls for bonding and structure elucidation. <i>Discussion of various electron count rules and structural bonding parameters of organometallic compounds.</i>	CLO3
Unit-4 10 Hours	Inorganic cages: Metallocenes, metal cluster compounds, metal-metal bond, metal carbenes, carbonyl and non-carbonyl clusters, fluxional molecules, application of organometallic compounds as catalysts in organic synthesis. Cage compounds of boron: boron cage compounds, boranes, carboranes and metallocene carboranes. <i>Peer discussion on Cage clusters formation rules via wede`s and Mingos rules.</i>	CLO4

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

Course Title: Organic Chemistry-II

Paper Code: CHM.522

Total Contact Hours: 45

L	T	P	Cr
3	0	0	3

Learning Outcome: The students will be able to

CLO1: Interpret and predict the energetically favoured conformation of cyclic and acyclic compounds, chirality and reactivity.

CLO2: Differentiate between thermally and photochemically driven pericyclic reactions and explain about their stereochemical aspects.

CLO3: Explore various molecular rearrangements in organic synthesis for the conversion of different functional group.

Units/ hours	Content	Mapping with CLOs
Unit-1 11 Hours	<p>Stereochemistry: Chirality, projection formulae, configurational and conformational isomerism in acyclic and cyclic compounds; stereogenicity, stereoselectivity, diastereoselectivity, D/L, R/S, E/Z and cis/trans configurational notations, <i>threo</i> and <i>erythro</i> isomers, optical purity, enantiotopic and diastereotopic atoms, groups and faces, stereospecific and stereoselective synthesis, optical activity in the absence of chiral carbon (biphenyls, allenes and spiranes), chirality due to helical shape, conformational analysis of acyclic compounds and cyclic compounds such as cyclopentane, cyclohexane, cyclohexanone derivatives, decalins, 1,2, 1,3-, 1,4-disubstituted cyclohexane derivatives and D-Glucose, effect of conformation on reactivity,</p> <p><i>Demonstration of conformational and configurational analysis, projection formulae and topicity of the molecules with the help of ball and stick models.</i></p> <p><i>Ball and stick models of biphenyls, allenes and spiranes for chirality.</i></p>	CLO1
Unit-2 11 Hours	<p>Photochemistry: Jablonski diagram, singlet and triplet states, photosensitization, quantum efficiency, photochemistry of carbonyl compounds, Norrish type-I and type-II cleavages, Photochemistry of alkenes and enones, Paterno-Buchi reaction, Photoreduction, Di π – methane rearrangement.</p> <p>Photochemistry of aromatic compounds, Photo-Fries reactions of anilides, Photo-Fries rearrangement, Barton reaction, Singlet molecular oxygen reactions.</p> <p><i>Application of photochemical reactions in biologically important molecules through peer learning</i></p> <p><i>Primary and secondary processes of photochemical reactions of carbonyl compounds and alkenes.</i></p>	CLO2

Unit-3 12 Hours	<p>Pericyclic chemistry: Introduction, Phases, nodes and symmetry properties of molecular orbitals in ethylene, 1,3-butadiene, 1,3,5-hexatriene, allyl cation, allyl radical, pentadienyl cation and pentadienyl radical.</p> <p>Electrocyclic reactions: Conrotation and disrotation, $4n$ and $4n+2$ systems. Woodward-Hoffmann rules. (i) Symmetry properties of HOMO of open chain partner (ii) Conservation of orbital symmetry and correlation diagrams.</p> <p>Cycloaddition reactions: Suprafacial and antarafacial interactions. $\pi^2 + \pi^2$ and $\pi^4 + \pi^2$ cycloadditions and stereochemical aspects. Diels-Alder reaction. Woodward-Hoffmann Selection rules. Explanation for the mechanism by (i) Conservation of orbital symmetry and correlation diagrams (ii) FMO theory</p> <p>Sigmatropic reactions: [1,j] and [i,j] shifts; suprafacial and antarafacial, selection rules for [l, j] shifts; Cope and Claisen rearrangements; explanation for the mechanism by (i) symmetry properties of HOMO (ii) Introduction to cheletropic reactions and the explanation of mechanism by FMO theory.</p> <p><i>Group project on the symmetry elements in FMO of $4n\pi$ and $(4n+2)\pi$ electron containing substrates</i></p> <p><i>Quiz on FMO, correlation diagram and PMO approaches for pericyclic reactions</i></p>	CLO3
Unit-4 11 Hours	<p>Rearrangements: General mechanistic considerations-nature of migration, migratory aptitude, mechanistic study of the following rearrangements: Pinacol-pinacolone, Wagner-Meerwein, Benzil-Benzilic acid, Favorskii, Neber, Beckmann, Hofmann, Curtius, Lossen, Schmidt, Carroll, Claisen, Cope, Gabriel-Colman, Smiles and Sommelet-Hauser rearrangements.</p> <p>Selective Name Reactions: Ene/Alder-ene reaction, Dakin reaction, Reformatsky, Robinson annulation, Michael addition, Hofmann-Löffler Fretag, Chichibabin reaction.</p> <p><i>Predicting the mechanistic pathways of rearrangement reactions through peer discussion</i></p> <p><i>Application of important name reactions for bioactive molecule synthesis through brainstorming</i></p>	CLO4

Course Title: Physical Chemistry-II

Paper Code: CHM.523

Total Contact Hours: 45

Learning Outcome: The students will be able to

CLO1: Evaluate and predict the spontaneity of a redox processes in electrochemical systems

CLO2: Apply activity coefficient calculated of solution using Debye-Huckel theory and Ideally-Dilute solutions in chemical aspects.

CLO3: Apprehend and apply Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics to the thermodynamic system.

CLO4: Establish and evaluate the mechanism and kinetics for catalytic and photochemical reactions, homogenous and heterogeneous catalyzed reactions.

CLO5: Interpret the fast reaction monitoring for complex reactions.

CLO6: Predict and establish the thermodynamic and kinetic aspects of adsorption and catalysis.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit 1 12 Hours	<p>Electrochemistry: Activity, Activity coefficient; determination of activity and activity coefficients, Activity-coefficients, mean activity coefficients; Debye-Huckel treatment of dilute electrolyte solutions.</p> <p>Electrochemical Cells: Nernst equation, redox systems, electrochemical cells, application of electrochemical cell, concentration cells with and without liquid junction, thermodynamics of reversible electrodes and reversible cells, potentiometric titration.</p> <p><i>Understanding application of electrochemistry using classroom games activity. Expanding the understanding of conductance application using peer learning.</i></p>	CLO1, CLO2
Unit 2 11 Hours	<p>Theories of Statistical Thermodynamics: Concept of Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics. Difference between Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics. Applications of Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics, Monoatomic solids, theories of specific heat for solids.</p> <p><i>Demonstrating application of various statistical thermodynamic theories and Debye theory for heat capacity.</i></p>	CLO3
Unit 3 11 Hours	<p>Reaction Kinetics: Introduction, complex reactions, steady state approximation, kinetic mechanisms of chemical reactions, Arrhenius and Eyring equations and their applications, collision theories of rate constant, treatment of unimolecular reactions, steric factor, ionic reactions: salt effect.</p> <p>Photochemical Reactions and Processes: Laws of photochemistry and kinetics of photochemical reactions.</p> <p>Fast Reaction Kinetics: Introduction to time-resolved techniques for absorption and emission measurements, relaxation method, study of kinetics of fast reactions by millisecond stopped-flow, nanosecond flash photolysis techniques</p> <p><i>Understanding chemical kinetics and potential surface-reaction coordinate by hands on activity either as gaming, stochastic or molecular dynamic models. Learning photochemical reaction kinetics through problem solving activities.</i></p>	CLO4, CLO5

Unit 4 11 Hours	<p>Adsorption: Adsorption of solids, Langmuir and Fredulich Isotherms, BET adsorption isotherm, Gibbs adsorption isotherm.</p> <p>Catalysis: Homogeneous catalysis and heterogeneous catalysis, enzyme catalysis. Michealis-Menten mechanism, Lineweaver-Burk Plot, competitive and non-competitive bindings, application of enzyme catalysis.</p> <p><i>Application and challenges in adsorption towards environmental and nanomaterial through peer learning. Enzyme binding and catalysis through inquiry guided and gaming based learning.</i></p>	CLO5, CLO6

Course Title: Molecular Spectroscopy

Paper Code: CHM.525

Total Contact Hours: 45

Learning Outcome: The students will be able to

CLO1: Apply microwave, infrared-vibration-rotation Raman and infra-red Spectroscopy for chemical analysis and prediction of molecular structure

CLO2: Demonstrate and apply electronic absorption and emission spectroscopy of elements and simple molecules.

CLO3: Demonstrate and elucidate the physical principles of nuclear magnetic and electron spin resonance spectroscopy.

CLO4: Explore application of laser spectroscopy and photoelectron spectroscopy in materials and biomaterials.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit 1 11 Hours	<p>Electronic Spectroscopy: Electronic transition, energy of electronic transition, selection rules, the Franck-Condon principle. UV-Visible and CD spectroscopy</p> <p>Photoluminescence: Jablonski Diagram; Measurement of fluorescence and phosphorescence lifetimes, photosensitization, quenching and photodimerization, Stern-Volmer equation.</p> <p>Microwave Spectroscopy: Basic principle and instrumentation, classification of molecules, selection rule in microwave spectroscopy, rigid rotor model, effect of isotopic substitution on the transition frequencies, intensities of spectral lines, non-rigid rotor.</p> <p><i>Problem solving approach to determine the bond length of diatomic and polyatomic molecules and effect of isotopic substitution on transition frequencies.</i></p>	CLO1, CLO2
Unit 2 12 Hours	<p>Pure Vibrational Spectroscopy: Basic principle and instrumentation of IR spectroscopy, Review of harmonic oscillator, selection rules, vibrational energies of diatomic molecules, zero-point energy, force constant and bond strength, anharmonicity, vibration-rotation spectroscopy, Morse potential energy diagram, P, Q, R branches, vibrations of polyatomic molecules, overtones and hot bands.</p> <p>Raman Spectroscopy - Basic principle and instrumentation of Raman spectroscopy, classical and quantum theories of Raman Effect, vibrational-rotational Raman spectra, selection rules, mutual exclusion principle, resonance Raman Spectroscopy, depolarization ratio, surface enhanced Raman spectroscopy, coherent anti-stokes Raman spectroscopy. Application of Raman spectroscopy.</p> <p><i>Brainstorming on use of electronic, pure vibrational, pure rotational and vibrational-rotational spectroscopy in understanding chemical characteristics.</i></p>	CLO1, CLO2

Unit 3 11 Hours	<p>Magnetic Resonance Spectroscopy: Basic principles of NMR and ESR, instrumentation of NMR and ESR, magnetization vector and relaxation, NMR transitions, Bloch equation, relaxation effects and mechanism, effect of quadrupole nuclei, nuclear overhauser effect (NOE), multiple pulse methods, Hyperfine splitting in ESR. Application of NMR and ESR Spectroscopy.</p> <p><i>Understanding applications of magnetic resonance spectroscopy through peer learning and brainstorming.</i></p>	CLO3
Unit 4 11 Hours	<p>Lasers and Laser Spectroscopy: Principles of laser action, pulsed lasers, examples of lasers: He-Ne, Nd-YAG, dye lasers.</p> <p>Atomic Force Spectroscopy: Basic principle and instrumentation, application of single molecule force spectroscopy.</p> <p>Photoelectron spectroscopy: Basic principle and instrumentation, photoelectric effect, X-ray photoelectron spectroscopy XPS. Application of XPS.</p> <p><i>Understanding application and instrumentation of laser, photoelectron and atomic force spectroscopy through peer discussion.</i></p>	CLO4

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming.

Course Title: Strategies in Synthesis

Paper Code: CHM.526

Total Contact Hours: 45

Learning Outcome: At the end of this course, student will be able to

CLO1: Identify various retrosynthetic strategies and design the synthesis of target molecules.

CLO2: Apply the concept of enolate chemistry for controlling the selectivity of various organic transformations.

CLO3: Design various processes for the synthesis of commercially important molecules taking into consideration the protection and deprotection strategies.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 11 Hours	<p>Retrosynthesis: Synthons, synthetic equivalent, functional group interconversion (FGI), functional group addition, functional group elimination, criteria for selection of target, linear and convergent synthesis, retrosynthetic analysis involving chemoselectivity and regioselectivity. Use of acetylene and aliphatic nitro compounds in organic synthesis. Reversal of polarity (umpolung), importance of the order of events in organic synthesis. One group and two group C-X disconnections, two group C-C disconnections; Michael addition, Robinson annulation, Diels-Alder reaction, control in carbonyl condensation. Importance of order of events in organic synthesis. Cyclisation reactions for synthesis of cyclic molecules and amine synthesis.</p> <p><i>Brainstorming on identification of the retrosynthetic route of some recently FDA approved commercial drug molecules.</i></p> <p><i>Learning through peer discussion on order of events in organic synthesis.</i></p>	CLO1
Unit-2 11 Hours	<p>Enolate Chemistry: Regio- and stereo-selectivity in enolate generation. "O" versus "C" alkylation, effect of solvent, counteraction and electrophiles; symbiotic effect; thermodynamically and kinetically controlled enolate formations; various transition state models to explain stereoselective enolate formation; enamines and metallo-enamines; regioselectivity in generation, application in controlling the selectivity of alkylation.</p> <p><i>Group discussion on stereoselective generation of enolates and alkylation in organic synthesis.</i></p>	CLO2
Unit-3 11 Hours	<p>Protection and deprotection of various functional groups: Protection of alcohols by ether, silyl ethers and ester formations and their deprotection. Protection of carbonyl group by acyclic and cyclic acetal, ketal, dithioacetals and dithioketals formation and their deprotection. Protection of 1,2-diols by acetal, ketal and carbonate formation and their deprotection. Protection of amines by acetylation, benzylation, benzyloxy carbonyl, <i>t</i>-butoxycarbonyl (Boc), fmoc, triphenyl methyl groups and their deprotection. Protection of carboxylic acids by ester formation and their deprotection: Recent advances in protection-deprotection free organic synthesis.</p> <p><i>Demonstration on the role of protecting groups in synthesis of commercial drugs.</i></p>	CLO3

Unit-4 12 Hours	<p>New synthetic reactions: Baylis-Hillman reaction, Biginelli reaction, Mukaiyama aldol reaction, Mitsunobu reaction, McMurrey reaction, Julia-Lythgoe olefination, and Peterson's stereoselective olefination, Buchwald-Hartwig coupling, Eishenmosher-Tanabe fragmentation, Shapiro reaction, Stork-enamine reaction, Aza-Cope, Aza-Wittig reaction, Ugi reaction, Robinson–Gabriel synthesis, Vilsmeier–Haack reaction.</p> <p><i>Peer group discussion on well-established and newly developed synthetic approaches including recent variants and advantages associated with them.</i></p> <p><i>Debate on various C-C and C-N bond forming and multicomponent reactions.</i></p>	CLO3
----------------------------------	---	-------------

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming.

Course Title: Practical Physical Chemistry

Paper Code: CHM.527

Total Contact Hours: 60

Learning Outcome: The students will be able to

CLO1: Develop skills on titrimetric analysis using conductivity meter, potentiometer and pH meter as well as buffer preparation and use.

CLO2: Hands on skills in viscometer, refractometer and spectrophotometer for different applications.

L	T	P	Cr
0	0	4	2

Experiments:

1. Determination of behavior and strength of a given acid/base by titrating with a base/acid conductometrically.
2. Determination of solubility and solubility product of sparingly soluble salts (e.g., PbSO_4 , BaSO_4) conductometrically.
3. Determination standard electrode potential of $\text{Fe}^{2+}/\text{Fe}^{3+}$ system by potentiometer using potassiumpermanganate
4. Preparation of buffers and measurement of their pH.
5. Determination of stability constant for Cu(II)-glycinate complex using potentiometry.
6. Determination of pK_a of acetic acid and H_3PO_4 by potentiometric titration using NaOH.
7. Determination of Surface tension of a given liquid.
8. Determination of refractive indices (RI) of given liquids and determination of the concentration from RI.
9. Verification of the Lambert-Beer's law and determination of extinction coefficient
10. Determination of stability constant of Fe(III)-salicylic acid complex by spectrophotometer.
11. To verify Freundlich and Langmuir adsorption isotherms for adsorption of acetic acid on activated charcoal.
12. Determination of partition coefficient of iodine between water and octanol and determination of equilibrium constant of tri-iodide.
13. Determination of rate constant and energy of activation of hydrolysis of an ester
14. Determination of the rate constant for the oxidation of iodide ions by hydrogen peroxide studying the kinetics as an iodine-clock reaction.
15. Determination of thermal stability of biomacromolecules.

Mode of Transactions: Demonstration, Experimentation, handling instruments, Explanation of data

Activity Based Learning:

1. Demonstration and application of potentiometry, conductometry, spectrophotometry, viscometer and stalagmometer.
2. Team activity of practical and observation recording for kinetic and thermodynamic parameters for chemical reactions.

Course Title: Computational and Structural Chemistry (Practical)

Paper Code: CHM.529

Total Contact Hours: 60

Learning Outcomes: After completing this course, the learner will be:

CLO1: Skilled in various chemistry software needed for higher studies.

CLO2: Develop knowledge skills and understanding of structure elucidation of unknown compounds via spectral interpretation of ^1H , ^{13}C NMR, IR, UV and Mass spectrum.

CLO3: Select and apply the data analytics to every process and analysis in chemistry, thereby bringing in quality control to his work in hand.

L	T	P	Cr
0	0	4	2

Experiments:

ChemDraw, Chem-Sketch, Draw the structure of simple aliphatic, aromatic, heterocyclic organic compounds with substituents. Get the correct IUPAC name and prediction of ^1H NMR signals.

Exposure to Softwares required for processing of raw FID NMR files, Molecular docking using Schrodinger/MOE Softwares or DFT studies using Gaussian software.

Single crystal structure solving of various compounds and complexes using X-Ray Diffraction (XRD) software Olex-2.

Spectral interpretation: Interpretation of UV, IR, NMR (1D & 2D-NMR) and mass spectrum.

Combined Structure problems: Exercises of structure elucidation of unknown compounds via combined spectral interpretation of IR, UV-vis, ^1H and ^{13}C NMR and mass spectra, along with two-dimensional NMR spectroscopy.

Statistical Analysis Methods:

- Determination of Detection limit, Quantitation limit and for instrumental method and method of analysis.
- Determination of quality control parameters for a method of analysis.
- Determination of Mean, Mode and Median, Skewness and Kurtosis, FWHM for chromatographic data.
- Linear least square fitting for calibration of spectrometer

- Non-Linear least square fitting for adsorption and kinetic data.
- Determination of ANOVA for intralaboratory testing.
- Error function and residual analysis of Linear and Non-linear least square fitting
- Optimization of process and analysis using Factor analysis, Principle Component Analysis
- Optimization of process using response surface methodology
- Determination of charges, pKa and electrostatic free energy of enzymes and proteins using pKa calculation software.

Course Title: Chemistry of Natural Products

Paper Code: CHM.575

Credits Hours: 45

L	T	P	Cr
3	0	0	3

Learning Outcome: At the end of this course student will be able to

CLO1: Recognize various types of natural products and their importance.

CLO2: Identify various types of natural products including their properties, occurrence, structure and biosynthesis.

CLO3: Apply the knowledge of natural product synthesis in drug development

Units/ hours	Content	Mapping with CLOs
Unit-1 11 Hours	<p>Terpenoids and Carotenoids: Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Geraniol, Menthol and β-Carotene and biological activities.</p> <p><i>Importance of isoprene rule in the biosynthesis of terpenes through group presentation</i></p> <p><i>Advances of terpene based drugs through peer learning</i></p>	CLO1
Unit-2 11 Hours	<p>Alkaloids: Nomenclature and physiological action, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, structure, stereochemistry, synthesis of the following: Ephedrine, Nicotine, Morphine Reserpine and general theory of biogenesis.</p> <p><i>Class room debate on theory of biogenesis of alkaloids</i></p> <p><i>Group project on structure-activity relationship based on alkaloid structures</i></p>	CLO2
Unit-3 11 Hours	<p>Steroids: Occurrence, nomenclature, basic skeleton and stereochemistry, structure determination and synthesis of cholesterol, partial synthesis of testosterone and progesterone, chemical tests for steroids and biological activities.</p> <p>Coumarins and lignans: Classification, isolation, stereochemistry, biological activity, biosynthesis and synthesis of lignans.</p> <p><i>Group presentation on biological importance of steroids and lignans</i></p> <p><i>Peer learning of pharmacophore model of natural products</i></p>	CLO2
Unit-4 12 Hours	<p>Plant pigments: Occurrence, nomenclature and general methods of structure determination. isolation, synthesis and biological activities of anthocyanins, chlorophyll.</p> <p>Carbohydrates: Introduction of sugars, structures of triose, tetrose, pentose, hexose, stereochemistry and reactions of glucose, conformation and anomeric effects in hexoses. Mono, di, oligo- and polysaccharides, separation and isolation, purification, structure determination, biological activity.</p> <p><i>Group presentation on biological importance of plant pigments</i></p> <p><i>Class room debate on structures and conformation of carbohydrates</i></p>	CLO3

Course Title: Supramolecular Chemistry

Paper Code: CHM.580

Total Contact Hours: 45

L	T	P	Cr
3	0	0	3

Learning Outcome: The students will acquire knowledge of

CLO1: Various supramolecular aspects of interaction between two chemical systems.

CLO2: Devising supramolecular systems based on complementarity and preorganizational requirements of host.

CLO3: Analyze design of hosts for functions based on supramolecular assembly using complementarity and preorganization.

CLO4: Interpret the basic designs of supramolecular machines

Units/ hours	Content	Mapping with CLOs
Unit 1 11 Hours	<p>Introduction: Definition and development of supramolecular chemistry, nature of binding interactions in supramolecular structures: ion-ion, ion-dipole, dipole-dipole, H-bonding, cation-π, anion-π, $\pi - \pi$ and van der Waals interactions. Supramolecular chemistry in life, ionophores, porphyrin and other tetrapyrrolic macrocycles, coenzymes, neurotransmitters, DNA and biochemical self-assembly. Pre-organization and complementarity, receptors, nature of supramolecular interactions.</p> <p>Host-guest chemistry: synthesis and structure of crown ethers, lariat ether and podands, cryptands, spherands, calixarenes, cyclodextrins, cyclophanes, carcerands and hemicarcerands. Concepts of selectivity, macrocyclic, macrobicyclic synthesis and template effects.</p> <p><i>A group activity on design of complementary architectures with explanation of their utility.</i></p>	CLO1
Unit 2 11 Hours	<p>Cation Binding: Binding Constant and its determination, concept of coordination chemistry, cation complexation using various preorganized host, soft ligands including N, S and P based macrocycles, Schiff's base, proton and ammonium ion complexation, carbon donor and π- acid ligands, siderophores.</p> <p>Anion Receptor: Anion recognition and its biological relevance, concepts on anion host design, from cation to anion hosts- a simple change in pH, guanidinium- based receptors, neutral receptors, organometallic receptors, coordination interactions. Chromogenic and fluorogenic receptors, dosimeters, ion pair recognition and zwitterion recognition.</p> <p><i>Innovating receptor designs for challenging and emerging sensing application through team work and brainstorming.</i></p>	CLO2
Unit 3 11 Hours	<p>Molecular Self-assembly: Supramolecular polymers: definition, kinetic and thermodynamic consideration of self-assembly. self-assembly molecules: design, synthesis and properties of the molecules, self-assembly by H-bonding, proteins and foldamers, DNA, catenanes, rotaxanes, molecular knot: topology and examples including trefoil and borromean rings, surfactants self-assembly, liquid crystals.</p> <p>Dendrimers structure and nomenclature, synthesis and characterization, supramolecular chemistry of dendrimers and its assembly, dendritic nanodevices</p> <p>Supramolecular polymers including amphiphilic block polymers and molecular imprinter polymers, biological self-assembly in amyloids, actins and fibrin, COF and supramolecular gels.</p> <p><i>Using supramolecular synthons for building self-assembled motif for purpose by peer learning.</i></p>	CLO3

Unit 4 12 Hours	Supramolecular and Molecular Devices: Supramolecular photochemistry and catalysis, molecular electronic devices: molecular electronic devices, molecular wires, molecular rectifiers, molecular switches and molecular logic gates, organics for photonics and electronics. Molecular Machines: Molecular machine terminology and bio-inspiration, ratchet mechanism including pulsating and tilt mechanism, covalent and supramolecular motors and their controlling mechanisms, machines based on catenanes and rotaxanes. Applications as molecular walkers, switchable catalysts, surface analysis at molecular dimensions. <i>Hands on exercise in groups to develop a theoretical design of a machine tool using organic synthons in supramolecular chemistry.</i>	CLO4
----------------------------------	--	-------------

Interdisciplinary Courses (IDCs)

Course Title: Basic Perspectives in Inorganic Chemistry

Paper Code: CHM.515

Total Contact Hours: 30

Learning Outcome: The student will able to

CLO1: Become expertise of the coordination chemistry of d-group elements and coordination of ions within living organisms.

CLO2: Know the environmental chemistry and metal hydrides as hydrogen energy source.

L	T	P	Cr
2	0	0	2

Units/ hours	Content	Mapping with CLOs
Unit-1 7 Hours	Chemistry of d-block elements. coordination chemistry, models and stereochemistry, theories, spectra and bonding. <i>Group discussion and problem solve involving characteristics of transition metals and their compounds.</i>	CLO1,
Unit-2 7 Hours	Ions role in bioscience: ionophores, porphyrin and other tetrapyrrolic macromolecules, coenzymes, neurotransmitters, metal binding to DNA. <i>Brainstorming discussion about essential inorganic elements and their compounds in living organisms</i>	CLO2
Unit-3 8 Hours	Metals in aqueous environment: Introduction, environmental chemistry, environmental composition, chemical processes, complexes, metal speciation of calcium, copper and mercury, their behaviour in hydrosphere. <i>Discussion on behaviour of metals and complexes in surrounding environmental sphere</i>	CLO2
Unit-4 8 Hours	Hydrogen Energy: Introduction, synthesis and structures of metal hydrides, coordination modes of hydrogen atom, hydrogen storage, H ₂ evolution under solar energy, thermal energy and acidifications. <i>Group discussion about current requirements and challenges of renewable energy resources.</i>	CLO2

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

Course Title: Introduction to Green Chemistry and Sustainability**Paper Code: CHM.516****Total Contact Hours: 30****Learning objective:** Students will be able to

L	T	P	Cr
2	0	0	2

CLO1: Analyze the harmful impact of traditional chemical processes on environment and health**CLO2:** Realize the relevance of Green Chemistry in the context of environment issues.**CLO3:** Acquaint with various tools of Green Chemistry.**CLO4:** Realize the judicious utilization of abundantly available precursors instead of depleting petroleum based feedstocks.

Units/ hours	Content	Mapping with CLOs
Unit-1 7 Hours	Introduction: Adverse effect of some of the current chemical practices on health and environment, concept and need of green chemistry, basic principles of green chemistry with examples– atom economy, wastage minimization, selection of starting materials etc. limitations/obstacle in the pursuit of the goals of green chemistry, types of solvent. <i>Relevance of the various principles of Green chemistry in various areas for sustainable development through brainstorming.</i>	CLO1, CLO2
Unit-2 7 Hours	Emerging non-conventional techniques: Microwave heating as energy efficient source, mechanism of microwave heating, Examples of microwave assisted organic synthesis, sono-chemistry and green chemistry. <i>Various emerging energy efficient tools and their heating mechanism for conducting chemical reactions through collaborative approach.</i>	CLO1, CLO2 CLO3
Unit-3 8 Hours	Green solvents: Ionic liquids: properties and advantages, use of ionic liquids as solvent as well as catalyst, recyclability of ionic liquids. Solvent-free synthesis. <i>Recyclability of ionic liquids through demonstration and discussion on their potential use as a replacement for halogenated volatile organic solvents.</i>	CLO2, CLO3
Unit-4 8 Hours	Value addition of abundantly available precursors: Need for the use of renewable precursors over petroleum based feedstocks, biomass conversion (carbohydrates, lignocellulose biomass) into value added molecules. <i>Progress and challenges for the conversion of biomass into value added chemicals through peer group learning.</i>	CLO4

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming

Course Title: Chemistry of Nanomaterials and Fabrication

Paper Code: CHM.517

Total Contact Hours: 30

Learning Outcome:

CLO1: The students will acquire knowledge of Nanotechnology,

CLO2: Fabrication and characterization of nanomaterials,

CLO3: Properties and applications of nanomaterials.

L	T	P	Cr
2	0	0	2

Units/ hours	Content	Mapping with CLOs
Unit-1 7 Hours	<p>Background to Nanotechnology: Scientific revolution- Atomic structures-molecular and atomic size-Bohr radius -emergence of nanotechnology-challenges in nanotechnology. Definition of a nano system - types of nanocrystals-one dimensional (1D)-two dimensional (2D)-three dimensional(3D) nanostructured materials - quantum dots - quantum wire- multifunctional nanostructures.</p> <p><i>Relevance of the various aspects of Nano chemistry in various areas for sustainable development through brainstorming.</i></p>	CLO1,
Unit-2 7 Hours	<p>Fabrication and Characterization of Nanomaterials: Top-down and bottom-up approaches: chemical routes for synthesis of nanomaterials: chemical precipitation and co-precipitation; metal nanocrystals by reduction, sol-gel synthesis; microemulsions or reverse micelles, myle formation; solvothermal synthesis; thermolysis routes, microwave heating synthesis; sonochemical synthesis; electrochemical synthesis. physical methods: -inert gas condensation, arc discharge, plasma arc technique, MW plasma, laser pyrolysis, molecular beam epitaxy, chemical vapour deposition method and electro deposition. diffraction analyses, imaging techniques, spectroscopic techniques.</p> <p><i>Various advanced techniques for nanomaterials characterization and their formation mechanism through collaborative approach.</i></p>	CLO2
Unit-3 8 Hours	<p>Nanomaterials and properties: Influence of nucleation rate on the size of the crystals- macroscopic to microscopic crystals and nanocrystals - large surface to volume ratio. Metals (Au, Ag) - metal oxides (TiO₂, CeO₂, ZnO etc.) - semiconductors (Si, Ge, CdS, ZnSe) - carbon nanotubes (CNT) - ceramics and composites - dilute magnetic semiconductor- biological system - DNA and RNA - lipids - size dependent properties - mechanical, physical and chemical properties.</p> <p><i>Concept of Nano dimension materials fabrication.</i></p>	CLO3

Unit-4 8 Hours	Applications of Nanomaterials: Photocatalysis- solar cell-water splitting-energy harvesting- LSPR- molecular electronics and nanoelectronics- quantum electronic devices - CNT based transistor and field emission display -biological applications - biochemical sensor-MRI agent - nanomedicine: molecular manufacturing - MEMS - NEMS - Bio-MEMS - protein nanoarrays - nano fluidics and micro fluidics -self-assembly of nanoparticles for biomedical applications-bacterial structures- cubosomes-dendrimers-DNA nanoparticle conjugates- bioactive nanomaterials-Au nanoparticles and CdSe quantum dots - molecular motors -nanoparticle and protein interactions. <i>Concept of Nano dimension materials for modern applications.</i>	CLO3
---------------------------------	---	-------------

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming.

Course Title: General Laboratory Practices

Paper Code: CHM.518

Total Contact Hours: 30

Learning Outcome: The students will acquire knowledge of

CLO1: Good laboratory practices

CLO2: Quality control and Quality assurance

CLO3: Chemical, biological and radiation hazards in laboratory and safety.

CLO4: General know how of analytical sample preparation.

L	T	P	Cr
2	0	0	2

Units/ hours	Content	Mapping with CLOs
Unit 1 7 Hours	<p>Good Laboratory Practices: Introduction and WHO guidelines on GLP and GMP. History of GLP. Quality assurance in GLP. Quality control laboratory, responsibilities, routine controls, instruments reagents, sampling plans.</p> <p><i>Regulatory requirement through gaming a laboratory for GLP through dramatization.</i></p>	CLO1
Unit 2 8 Hours	<p>Quality Standards and Quality Assurances: Advantages and disadvantages of quality standards, concepts of quality control, quality assurance its functions and advantages. Standard test procedures, protocols, non-clinical testing, controls on animal house, data generation and storage, quality control documentation, retention samples, records. Complaints and recalls, evaluation of complaints, recall procedures, related records and documents.</p> <p><i>Understanding the quality deliverability of disciplinary laboratory through team brainstorming.</i></p>	CLO2
Unit 3 8 Hours	<p>Safety and Hazard Analysis: Chemical classification of hazards, Radiation hazard, AERB regulation for Fire and its prevention, biosafety and biohazard. Weapons of Mass destruction</p> <p><i>Understanding National and international regulatory requirements of chemical and bio- hazards through hands-on inspection of laboratory.</i></p>	CLO3
Unit 4 7 Hours	<p>Basic Analytical practices: Titrimetry, Gravimetric analysis, Potentiometry and Spectrophotometric analysis. Pesticides and pesticide residue extraction, Solid phase extraction etc. Trace metal sample preparations and analysis. Proteomic and metabolomic sample preparations</p> <p><i>Understanding the selection of analytical procedures for analysis and sample preparation methods using peer learning.</i></p>	CLO4

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial.

Course Title: Chemicals of Everyday life

Paper Code: CHM 519

Total Lectures: 30

Learning objective: Students will be able to

CLO1: Know the utility of various chemicals in daily life.

CLO2: Explain the importance of green approaches as the need of the hour

L	T	P	Cr
2	0	0	2

Units/ hours	Content	Mapping with CLOs
Unit-1 8 Hours	<p>Chemicals and safety :Chemicals in daily life, Cosmetics, Perfumes, Soaps and detergents, Cleaning action of detergent, Handling of strong acids and bases, Disinfectant, Insecticides and pesticides, Chemical treatment of vegetables and fruits</p> <p><i>Project work on list of chemicals used in the kitchen and in personal hygiene</i></p> <p><i>Project work on chemical constituents present in various spices used in the kitchen, fruits and vegetables</i></p>	CLO1
Unit-2 8 Hours	<p>Common chemical processes: Chemical reactions, Basics of organic synthesis, Chemistry of photosynthesis, Rusting, Electrochemical cells, Metal electroplating, Acid base titration in the lab</p> <p>Use of polymers in daily life, Polymer based products, Teflon, Polystyrene, Plastic bags, ATM cards.</p> <p><i>Discussion on chemical composition of daily use articles like soap, shampoo, toothpaste etc.</i></p>	CLO2
Unit-3 7 Hours	<p>Chemistry of small bioactive molecules : Caffeine, Nicotine, Paracetamol, Aspirin, DNA and RNA bases, Carbohydrates</p> <p>Abused substances like morphine, Cannabis, Cocaine etc.</p> <p><i>Use and overuse of medicines: a debate</i></p>	CLO1, CLO2
Unit-4 7 Hours	<p>Green chemical processes :Environment friendly process, Principle of green chemistry, Atom economy and scope, Prevention/Minimization of hazardous/toxic products, designing safer chemicals, Selection of appropriate auxiliary substances (solvents, separation agents etc.), Use of renewable starting materials, Avoidance of unnecessary derivatization-careful use of blocking/protection groups</p> <p>Microwave in organic synthesis: Introduction to synthetic organic transformation under microwave (i) Microwave assisted reactions in water (ii) Microwave assisted reactions in organic solvents. (iii) Microwave in solvent free reactions.</p> <p><i>Sustainable lifestyle: peer discussion in the classroom</i></p>	CLO1, CLO2

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial.

Course Title: Chemistry of Drug Design and Synthesis

Paper Code: CHM 508

Total Contact Hours: 30

L	T	P	Cr
2	0	0	2

Learning Outcome: At the end of this course student will be able to

CLO1: Rationalize the basis of drug design, drug action and drug metabolism.

CLO2: Apply the knowledge to design and synthesize different drug molecules.

CLO3: Interpret the mechanism of action of different classes of drugs.

Units/ hours	Content	Mapping with CLOs
Unit-1 8 Hours	<p>Basics of Drug Action: Weak interactions in drug molecules, Covalent, ion, ion-dipole, hydrogen bonding and van der Waals interactions, Drug-receptor interactions, receptor theories and drug action, Occupancy theory, rate theory, induced fit theory, macromolecular perturbation theory, activation-aggregation theory, enzyme kinetics in drug action, mechanisms of enzyme catalysis.</p> <p><i>Apply the knowledge of drug-receptor interactions in drug design through peer learning</i></p>	CLO1
Unit-2 7 Hours	<p>Drug Design: Introduction, Structure Activity Relationships in drug design: Qualitative versus quantitative approaches, advantages and disadvantages; rational approaches to lead discovery, bioisosterism, Insights into molecular recognition phenomenon; Structure based drug design, ligand based drug design.</p> <p><i>Class discussion of molecular modelling in structure based and ligand based drug design approach</i></p>	CLO2
Unit-3 7 Hours	<p>Drug Metabolism: Biotransformation of drugs, enzymes responsible for bio-transformations, microsomal and non-microsomal mechanisms; Factors influencing enzyme induction and inhibition, Factors effecting drug metabolism; Models to study drug metabolism, Adverse drug reactions; toxic reactions, allergic reactions.</p> <p><i>Usefulness of different models to study drug metabolism through peer discussion</i></p>	CLO2
Unit-4 8 Hours	<p>Mechanism of action and synthesis of various drugs: Introduction to parasitic and infectious diseases, Mechanism of action of anti-tuberculosis drugs, anti-HIV drugs, anti-malarial drugs, anti-leishmanial drugs and anti-cancer drugs. Mechanism of drug resistance in infectious disease. Synthesis of anti-tuberculosis, anti-HIV, anti-malarial, anti-leishmanial and anti-cancer drugs.</p> <p><i>Recent advances on anticancer and antibiotic drug synthesis through brainstorming</i></p>	CLO3

Course Title: Project Report

Paper Code: CHM.599

Total Contact Hours: 120

L	T	P	Cr
0	0	8	4

Learning Outcome: The student would be able to

CLO1: Understand the lacunas in the methodology to experimentation.

CLO2: Independently plan and execute experiments in the laboratory set-up

CLO3: Analyze and interpret the results obtained through different experiments.

CLO4: Apply expertise and specific skills in the frontier area of research.

As per the defined objectives in the research proposal, the student would carry out his experimentation to achieve these goals. The student would get experiments evaluated by the supervisor regularly, wherein the progress of the student would be evaluated. Upon achieving the objectives of the synopsis, the project report will be prepared as per the university guidelines for PG diploma in Chemistry in consultation with the supervisor. Project would be verified for plagiarism and submitted for evaluation by committee.

Course Title: Chemical Laboratory Techniques

Paper Code: CHM 584

Total Contact Hours: 120

L	T	P	Cr
0	0	8	4

Learning Outcome: At the end of this course student will be able to

CLO1: Train the learners in the operation and maintenance of chemicals & common apparatus used in laboratories. Familiarize them to develop skills in common laboratory techniques; train them in the procedures of procurement and storage of laboratory equipment, apparatus, glass wares and chemicals; enable them to follow appropriate disposal procedures and safety measures required for chemistry laboratories.

CLO2: Enable them to follow appropriate disposal procedures and safety measures required for chemistry laboratories. It will produce well trained Staff /Technicians to work in chemistry labs, especially Pharma industries or other small scale industries.

CLO3: To provide knowledge to perform the basic and research experiments. To impart knowledge of all safety measures in the chemistry laboratory, proper disposal of chemicals, chemical wastes and other waste materials; awareness about the handling of corrosive chemicals, lab accidents, fire extinguishers and other safety means; Knowledge of computer for proper organization and management of chemistry laboratories, minor electronic equipment, maintain lab record, inventory etc.

Units/ hours	Content	Mapping with CLOs
Unit-1 15 Hours	<p>Introduction of Chemistry Lab: General introduction of chemistry laboratory, common instruction for safe working in chemical laboratories, Lab design, Storage, ventilation, lighting, fume, cupboard, arrangement of store, Safety provisions, Organization of practical work, Maintenance of laboratory, equipment/ apparatus Cleaning of laboratories and preparation room.</p> <p>Introduction of Lab Apparatus: <i>Glass apparatus</i> - Beaker, Test tube, boiling tube, funnel, separating funnel, filtration flask, round bottom flask, flat bottom flask, condenser Liebig flask, watch glass etc. measuring conical or condenser, petridish, desiccator. <i>Volumetric Apparatus</i> - Measuring cylinder, burette, pipette, Volumetric flask, analytical balance, single-pan electronic balance/ electrical analytical balance etc. <i>Miscellaneous apparatus</i>- Buchner funnel, Bunsen burner, burette stand, retort clamp, china dish/evaporating basin, wire gauze, cork borers, filter pumps, crucible, mohr clip, pipe clay triangle, pestle and mortar, sprit lamp, spatulas, thermometer, pH meter/pH paper etc. and laboratory centrifuge. <i>Apparatus for heating:</i> Bunsen burner, water bath, oil bath hot plate, sand bath, hot air oven, heating mantle etc. <i>Handling and storage of glass apparatus</i> Solution Preparation: Water as a solvent, types of water, solutions, components of a solution, types of solution, solubility, concentration of solutions: percentage, molarity, normality, molality (in ppm) calculation of masses and volumes for preparation of solutions solids, liquids. <i>Group discussion on use of chemicals and problem solving of solution of different normality/concentrations.</i></p>	CLO1, CLO2
Unit-2 15 Hours	<ol style="list-style-type: none"> 1. Handling of common laboratory equipment 2. Cork boring experiment 3. Calibration of volumetric glassware 4. Weighing of chemicals using analytical balance 5. Preparation of solutions, indicators and reagents. 6. Preparation of buffer solutions and determination of their pH Values. 7. Preparation of some organic compound and determination of their boiling point and melting point. <p><i>Hand on experience of common laboratory and research equipment.</i></p>	CLO1, CLO2

<p>Unit-3 15 Hours</p>	<p>Common Laboratory Techniques: <i>Refluxing:</i> Apparatus with interchangeable ground glass joints (Quick fit), <i>Filtration:</i> Techniques and filter media, filter paper, simple filtration, <i>Recrystallization:</i> Choice of solvent and precautions with flammable solvents, <i>Distillation:</i> recovery of solvents through partial distillation, distillation under reduced pressure, and <i>Determination of Boiling Point</i> Chemistry Laboratory Safety: <i>Fire Hazards:</i> Causes of fires, classification of fires, fire prevention protocols and measures, fire alarms, fire escapes, fire Extinguishers and their uses. <i>Chemical Hazards:</i> Classification and handling of hazardous chemicals, storage of chemicals, transfer from large containers <i>Gas Hazards:</i> usage of LPG and CNG safer in the laboratory, detection and handling of Gas Leakage, health hazards of gases Use of Computer in Laboratory: Hardware in computer, CPU, I/O devices, data input, data processing, data output, application MS office software and Internet. Stock and Inventory Control: Arranging stock, locating and referencing, shelf arrangement of stock, order books, inventory. Files and Records <i>Filing Systems-</i> Classification of files, filing methods, filing system for equipments and chemicals, filing of printed and written material, preparation of lab manuals. <i>Records system :</i> Stock records, recording stock (used and misused), record of use of listed poisons, record of use of alcohol, record of breakages, information about equipment serial numbers, record maintenance, miscellaneous records. <i>Activity 1:</i> Cleaning of laboratories and preparation room. <i>Activity 2:</i> Classification of apparatus in store. <i>Activity 3:</i> Cleaning of glassware. <i>Activity 4:</i> Organization of practical work. <i>Activity 5:</i> A brief report on Safety provisions in laboratories.</p> <p><i>Peer discussion on Laboratory Techniques and significance of records of experimental data</i></p>	<p>CLO1, CLO2</p>
--	--	-------------------------------------

Unit-4 15 Hours	1. Purification of aniline by distillation method 2. Crystallization of various compounds and their TLC study 3. Column chromatographic method for separation of compounds 4. Simple acid-base titration. 5. Preparation of distilled/deionized water. 6. Preparation of inorganic double salts. 7. Experiments based on chromatography Activity 1: Classification of chemicals in laboratory/store. Activity 2: Classification hazardous chemicals based on the information given on the labels. Activity 3: Preparation of comparative chart. Activity 4: To learn the use of a carbon dioxide fire extinguisher. Activity 5: Preparation of stock register on MS-Excel. <i>Brainstorming discussion on various lab practicals..</i>	CLO2 CLO3
--------------------------------------	--	--------------------------------

Course Title: Intellectual Property Right

Paper Code: CHM.585

Total Lecture: 60

L	T	P	Credits
4	-	-	4

Learning Outcome: After the completion of the course students will be able to

CLO1: Understand the importance of Intellectual Property Rights, its various types and scope for the protection of his/her novel creations.

- CLO2:** Critically analyse the inventiveness of his/her work over the prior art available.
CLO3: Think and develop ethical values regarding copyrights
CLO4: Familiar with various agencies and treaties regarding Intellectual Property Rights

Units/ hours	Content	Mapping with CLOs
Unit-1 14 Hours	Introduction: Intellectual property and need for its protection, Intellectual Property Rights (IPR), Types of intellectual property; Industrial property & copyrights and related rights. IPR in India and abroad, promotion and protection concepts Impact of IPR on development, health & agriculture, IPR in biotechnology: New plant varieties, protection need and laws.	CLO1
Unit-2 16 Hours	Patents: Characteristics of patent. Patentable and non-patentable inventions in India, patent applications and their types; specification and claims, granting of patent, Transfer Commercialization Related Aspects, Indian Patent Act 1970, and amendments, Opposition to the grant of patent applications and post grant oppositions processes. Trademarks: Types, purpose and function of trademark, registration and protection aspects Industrial Designs: Registration and protection Geographical Indicators: Geographical indicators and their protection, difference between geographical indication and trademark. Trade Secrets: Advantages and limitations	CLO1, CLO2
Unit-3 15 Hours	Copyrights: Copyrightable works; ownership of copyright; Exploiting Fair Use concept in copyright especially in academics and research. Infringement of copyright: Related Rights: Difference between copyright and related rights, celebrity rights Academic integrity: Plagiarism and UGC regulations 2018, Plagiarism detection softwares	CLO2, CLO3
Unit-4 15 Hours	Organizations, agencies and Treaties: Territoriality of IPR; International Conventions in IPR; Role of World Trade Organization (WTO) and World Intellectual Property Organization (WIPO), The patent corporation treaty (PCT), GATT (General Agreement on Tariff and Trade), TRIPs (Trade Related Intellectual Property Rights) agreement, TRIMS (Trade Related Investment Measures) and GATS (General Agreement on Trades in Services),	CLO4

Mode of Transaction: Lecture, Demonstration, Lecture cum demonstration, Dialogue Mode, Experimentation, Problem solving, Seminar.

Course Title: Modern Instrumental Methods

Paper Code: CHM.587

Total Contact Hours: 60

Learning Outcome: After the completion of the course students will knowledge on

CLO1: Principles and analytical applications of modern instrumentation.

CLO2: Principles of various chromatography and their application for purification of compounds.

CLO3: Principles of various radioanalytical methods and application of different radioisotopes in industry

CLO4: Demonstration of various imaging techniques and hands-on training on several spectroscopic techniques

L	T	P	Cr
4	0	0	4

Units/ hours	Content	Mapping with CLOs
Unit-1 15 Hours	<p>Principles and Instrumentation: Analytical applications of following techniques: Atomic Absorption spectroscopy, Flame photometry, Inductively coupled plasma-Atomic Emission spectroscopy, Scanning Electron Microscopy.</p> <p><i>Peer discussion on principles of modern instrumentation</i> <i>Classroom discussion on various analytical applications of modern instrumentation</i></p>	CLO1
Unit-2 15 Hours	<p>Chromatography: Gas solid Chromatography, Gas liquid Chromatography, High performance liquid chromatography, ion exchange chromatography, paper chromatography, thin layer chromatography, column chromatography, gel permeation chromatography</p> <p><i>Demonstration of chromatographic techniques in the laboratory</i> <i>Classroom discussion on the principles of various chromatography for purification of compounds</i></p>	CLO2
Unit-3 10 Hours	<p>Radioanalytical Methods: X-ray diffraction methods, Neutron activation analysis, isotope dilution analysis, Radiometric titrations, particle induced X-ray Emission, Use of radioisotopes - in industry, agriculture and physicochemical studies.</p> <p><i>Principles of various radioanalytical methods through classroom discussion</i> <i>Application of different radioisotopes in industry through peer learning</i></p>	CLO3
Unit-4 20 Hours	<p>Imaging Techniques: Electron Microscopy including TEM, STEM, and FESEM with dark field and bright field imaging.</p> <p>Industrial visits and Hands-on Training and demonstration practical based on following techniques: HPLC, GCMS, NMR, FTIR, XRD, TGA, AAS and SEM.</p> <p><i>Demonstration of various imaging techniques</i> <i>Hands-on training on several spectroscopic techniques</i></p>	CLO3

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming

Course Title: Inorganic Chemistry-III

Paper Code: CHM.551

Total Contact Hours: 45

Learning Outcome: The students will be able to

CLO1: Apply properties of f-block elements to analytical and spectroscopic applications

CLO2: Elucidate the inorganic structures using multinuclear-NMR, ESR and Mossbauer Spectroscopy

CLO3: Demonstrate the use of radioanalytical chemistry.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 10 Hours	<p>Lanthanides, actinides and super-heavy elements: Coordination chemistry, magnetic and spectral properties, comparison of general properties of lanthanides and actinides, comparison with d-block elements, organo-lanthanides and actinides, analytical application of lanthanides and actinides-lanthanides as shift reagents and high temperature super conductors.</p> <p><i>Group discussion on comparative properties and problem solving of lanthanide and Actinide elements.</i></p>	CLO1, CLO2
Unit-2 15 Hours	<p>Nuclear Magnetic Resonance (NMR) and Electron Spin Resonance (ESR) Spectroscopy:</p> <p>NMR: Basic concepts of NMR with emphasis on ^{31}P, ^{19}F, ^{29}Si, ^{11}B, ^{10}B, ^{57}Se, ^{125}Te, ^{95}Mo, ^{109}Ag, ^{195}Pt, ^{119}Sn and explanation with appropriate examples. NMR study in Fluxional organometallic compounds.</p> <p>ESR: Basic elements of ESR, Fine structure of ESR Signals transition metal ions, Zero-field Splitting, Kramer`s Degeneracy, Hyperfine Splitting of various free radical spin polarization for atoms and transition metal ions, spin orbit coupling and significance of <i>g</i>-tensors, application of transition metal complexes (having one unpaired electron) including biological systems.</p> <p><i>Hand on experience of inorganic complexes for resonance spectroscopy using NMR instrument and structural elucidation.</i></p>	CLO1, CLO2
Unit-3 10 Hours	<p>Mossbauer Spectroscopy: Basic principles, spectral parameters and spectrum display, application of the technique to the studies of (1) bonding and structures of Fe^{2+} and Fe^{3+} compounds including those of intermediate spin, (2) Sn^{2+} and Sn^{4+} compounds- nature of M-L bond, coordination number, structure and (3) detection of oxidation state and non-equivalent MB atoms.</p> <p><i>Peer discussion on basic parameters and technique implication for structural elucidation of iron and tin contain compounds using Mossbauer Spectroscopy</i></p>	CLO1, CLO2
Unit-4 10 Hours	<p>Nuclear Chemistry: Classification of nuclides, nuclear stability, atomic energy, types of nuclear reactions-fission and fusion, nuclear decay laws, radioanalytical techniques.</p> <p><i>Brainstorming discussion of nuclear reaction and atomic energy.</i></p>	CLO3

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

Course Title: Organic Chemistry-III

Paper Code: CHM.552

Total Contact Hours: 45

Learning Outcome: The students will be able to

CLO1: Interpret and demonstrate use of free radical chemistry for various coupling reactions including metal-free C-H bond activation/ functionalization.

CLO2: Apply various oxidizing and reducing reagents in a logical manner for their application in functional group transformation in organic synthesis.

CLO3: Compare the reactivity of smaller, five and six membered heterocyclic compounds and perform their synthesis.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 11 Hours	<p>Free radical reactions: Types of free radical reactions, free radical substitution mechanism at an aromatic substrate, free radical rearrangement, neighbouring group assistance, reactivity for aliphatic and aromatic substrates at a bridgehead, Reactivity in the attacking radicals, the effect of solvents on reactivity, auto-oxidation. Coupling of alkynes and arylation of aromatic compounds by diazonium salts. Hunsdiecker Reaction, Coupling of Alkynes, Acyloin Condensation, Barton Nitrite Photolysis Reaction, Barton Decarboxylation. Recent trends in oxidative functionalization of C-H bond <i>via</i> free radical chemistry.</p> <p><i>Brainstorming on identification of free radical quenching reagents and role of free radicals in daily life.</i></p>	CLO1
Unit-2 11 Hours	<p>Metal and non-metal mediated oxidation: Mechanism, selectivity, stereochemistry and applications of oxidation reactions, Baeyer-Villiger, Oppenauer oxidation, oxidation reactions using DDQ, NBS, Pb(OAc)₄, Selenium dioxide, PCC, PDC, Cr and Mn based reagents, phase transfer catalysis, Periodic acid, Ceric ammonium nitrate, OsO₄, Swern oxidation, hydroboration, Sharpless asymmetric epoxidation, epoxidations using peracids. Recent approaches for oxidation using green oxidants.</p> <p><i>Demonstration on the synthesis and application of oxidizing agents like PCC. Peer discussion on green oxidizing agents.</i></p>	CLO2
Unit-3 11 Hours	<p>Metal mediated reduction: Mechanism, selectivity, stereochemistry and applications of catalytic hydrogenations using Pd, Pt and Ni catalysts (Lindlar, Rosenmund, Adam's catalysts), Wilkinson's catalyst, Clemmensen reduction, Wolff-Kishner reduction, Meerwein-Ponndorf-Verley reduction, dissolving metal reductions, Birch reduction, Reductions using metal hydride NaBH₄, Luche reduction, NaBH₃CN, L-selectride, K-selectride, NaBH(OAc)₃, LiAlH₄, DIBAL.</p> <p><i>Peer discussion on selective use and careful handling of reducing agents.</i></p>	CLO2

Unit-4 12 Hours	<p>Heterocyclic Chemistry: Systematic (Hantzsch-Widman system) and replacement nomenclature for monocyclic, fused and bridged heterocycles, aromatic heterocycle, non-aromatic heterocycle: bond angle and torsional strains and their consequences in small ring heterocycles, conformation of six-membered heterocycles.</p> <p>Three-membered and four-membered heterocycles: aziridines, oxiranes, thiranes, azetidines, oxetanes.</p> <p>Five membered heterocycles containing two heteroatoms (S, N, O): Diazoles (imidazole, pyrazole), triazoles, oxazoles and thiazoles.</p> <p>Benzo-fused five-membered heterocycles: Indoles, benzofurans and benzimidazoles.</p> <p>Six-membered heterocycles: Synthesis and reactions of coumarins, chromones.</p> <p><i>Debate on reactivity order, basic and aromatic character of five- and six- membered heterocycles containing one and two heteroatoms.</i></p>	CLO3

Course Title: Bioinorganic and Biophysical Chemistry

Paper Code: CHM.553

L	T	P	Cr
3	0	0	3

Total Contact Hours: 45

Learning Outcome: At the end of this course student will be able to

CLO1: Determine structure and biological functions of metalloproteins and enzymes.

CLO2: Classify metallobiomolecules on the basis of their functional properties.

CLO3: Analyze the role of metal ions in the biological system.

CLO4: Determine the factors that govern the thermodynamic and mechanical stability, folding, and dynamics of proteins.

CLO5: Interpret kinetics, thermodynamics, and mechanism of protein folding.

Units/ hours	Content	Mapping with CLOs
Unit 1 11 Hours	<p>Inorganic Chemistry of Enzymes – I: Metalloporphyrins: Hemoglobin and myoglobin, nature of heme-dioxygen binding, model systems, cooperativity in hemoglobin, structure and function of hemoglobin and myoglobin. Other iron-porphyrin biomolecules, peroxidases and catalases, cytochromes, cytochrome P450 enzymes, other natural oxygen carriers, hemerythrins, electron transfer. Biochemistry of iron, iron storage and transport, ferritin and transferrin.</p> <p><i>Brainstorming regarding structure-function relationship of heme and non-heme protein.</i></p>	CLO1
Unit 2 12 Hours	<p>Inorganic Chemistry of Enzymes – II: Metallothioneins: Ferredoxins, carboxypeptidase, carbonic anhydrase, blue copper proteins, superoxide dismutase and hemocyanins.</p> <p>Enzymes: Structure and function, inhibition and poisoning vitamin B₁₂ and B₁₂ coenzymes metallothioneins, bio-inorganic chemistry of Mo and W.</p> <p><i>Comparison of the reactivity of Ferredoxins and artificial Iron-sulfur clusters.</i></p> <p><i>Peer group discussion on structure-function relationship of metallothioneins and metalloenzymes.</i></p>	CLO2
Unit 3 11 Hours	<p>Metal Ions in Biological Systems: Role of metal ions in replication and transcription process of nucleic acids. Biochemistry of calcium as hormonal messenger, muscle contraction, blood clotting, neurotransmitter, metals in the regulation of biochemical events.</p> <p><i>Group discussion on the significance of metal ions and non-metals in various diseases.</i></p>	CLO3

Unit 4 11 Hours	Biophysical Chemistry: Principles of biophysical chemistry (pH, buffer, reaction kinetics, thermodynamics), physical principle of structure, function, and folding of proteins, conformations of proteins (Ramachandran plot, secondary, tertiary and quaternary structure; domains; motif and folds), determination of protein structures by spectroscopic methods (CD, FTIR, NMR), thermodynamics of protein folding by spectroscopic and calorimetric methods, protein conformational study by NMR and fluorescence spectroscopy. <i>Demonstration of applications of spectroscopic and calorimetric techniques for biochemical and biophysical characterizations of macromolecules.</i>	CLO4, CLO5
----------------------------------	---	-----------------------------

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial.

Course Title: Advanced Practical Chemistry

Paper Code: CHM.556

Total Contact Hours: 60

Learning Outcome: At the end of this course students will be able to

L	T	P	Cr
0	0	4	2

- CLO1:** Identify various agents used for drying of solvents and their disposal.
- CLO2:** Separate and purify the desired product from an organic reaction.
- CLO3:** Characterize organic compounds using various spectroscopic techniques.
- CLO4:** Realize the impact of various coupling and click chemistry strategies for construction of value added chemicals.
- CLO5:** Biochemical, biophysical and structural characterizations of bio-macromolecules.

Experiments:

Solvent Drying: Use of sodium metal for drying of toluene and precautions while quenching the residual sodium. Drying of DCM using P₂O₅ and safe disposal of residual P₂O₅.

- Synthesis:** Separation and purification of organic compounds by column chromatography, percentage yield calculation (any seven)
 - Preparation of allylic alcohols *via* Baylis-Hillman reaction using DABCO as a catalyst and their characterization through various spectroscopic techniques.
 - To study the reaction of vanillin with malonic acid for the synthesis of 4-Vinylguaiacol.
 - To study Buchwald-Hartwig reaction of aryl halide with an amine using Cu-based catalyst.
 - Synthesis of triazole *via* reaction of alkyne with azide (Huisgen cycloaddition).
 - Synthesis of stilbenes *via* Heck coupling Strategy.
 - To study decarboxylation of Ferulic acid under microwave irradiation.
 - To study dehydration of benzylic alcohols using imidazolium based ionic liquid.
 - To synthesize benzofused heterocyclic compounds
 - Coumarin
 - benzothiazole
 - pyrazole
 - isooxazole
 - To synthesize 2-phenyl-1,3,4-oxadiazole from benzhydrazide.
 - To synthesize substituted benzodiazepine from chalcone *via* reflux conditions.
 - To study synthesis of Dilantin *via* benzylic-acid rearrangement
 - To study the rearrangement of benzopinacol into benzopinacolone
 - To study the Vielsmeyer-Haack reaction of indole/acetophenones.
 - To study the three component coupling for the synthesis of (any one)
 - dihydropyrimidinone (*via* Biginelli reaction)
 - propargylamine (*via* A³-coupling)
- Advanced Instrumentation Experiments:**
 - Determination of concentrations of proteins and DNA using spectrophotometer
 - Structural analysis of amino acids and proteins using CD, NMR and Fluorescence spectrometer.
 - Study of thermal denaturation (T_m and DH_m) of proteins and DNA using UV-Visible spectrophotometer, CD spectrometer and DSC.
 - Measurement of zeta potential and sizes of nanoparticles by DLS
 - Determination of Michaelis-Menten (K_m) constant in enzyme kinetics.
 - Particle size and hydrodynamic radii analysis for adsorbents, protein or nanoparticles
 - Measurement of affinity constant of metal complex or metal binding to protein by ITC

Mode of Transactions: Demonstration, PPT, videos, Lecture cum demonstration

Course Title: Entrepreneurship

Paper Code: CHM.586

Total Hours: 30

Learning Outcomes: On the completion of this course, students will be able

CLO1: To develop understanding about problems and prospects in entrepreneurship.

CLO2: To gain insights about entrepreneurial behaviour and skills.

CLO3: To understand the protection of innovation and intellectual property rights

CLO4: To develop understanding about writing business plan/project proposals & managing start-up issues.

Units/ hours	Content	Mapping with CLOs
UNIT I 7 Hours	<p>Entrepreneurial Structure; Nature, Characteristics, functions and its role in economic development, Entrepreneurship- problems and prospects in India Entrepreneurial Behaviour and Skills</p> <p><i>Role of Entrepreneurship in economic development of India through peer group discussion.</i></p>	CLO1
UNIT II 7 Hours	<p>Role of industries/entrepreneur's associations and self-help groups, Funding opportunities for start-ups. Basic start-up problems, Preliminary contracts with the vendors, suppliers, bankers, principal customers. Contents of business plan/ project proposal</p> <p><i>Peer discussion on various start-ups and recent funding opportunities.</i></p>	CLO2
UNIT III 8 Hours	<p>Intellectual property: Concept of intellectual property, Industrial property: Patents, Trademarks, GI, copyrights and related rights. WTO, WIPO and various treaties: Trade related aspects of intellectual property rights (TRIPS), Trade related investment measures (TRIMS). Scope of Protection, Risks involved and legal aspects of Trade Secret Protection.</p> <p><i>Case studies on traditional knowledge and patent issues; Turmeric, Basmati and neem cases</i></p>	CLO3
UNIT IV 8 Hours	<p>Key business concepts Business plans, market need, project management and routes to market. Chemistry in Industry, Current challenges and opportunities, role of chemistry in India and global economies. Use of hazardous chemicals in Industries and the Importance of development of cost-effective and green technology.</p> <p><i>Group presentations on the Importance of development of cost-effective and benign technologies</i></p>	CLO4

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

Course Title: Green Chemistry

Paper Code: CHM.520

Total Contact Hours: 45

Learning outcome: Students will be able to

CLO1: Differentiate various aspects of green chemistry for sustainable development

CLO2: Utilize ionic liquids, water and solid supported reaction conditions to reduce or eliminate use of volatile organic solvents

CLO3: Utilize energy efficient MW and ultrasonication in organic synthesis.

CLO4: Apply the judicious use of green reagents for the environmental friendly synthesis of value added chemicals

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 11 Hours	<p>Introduction to green chemistry: History, need and goals. Green chemistry and sustainability, dimensions of sustainability, limitations/obstacles in pursuit of the goals of green chemistry. Opportunities for the next generation of materials designers to create a safer future. Basic principles of green chemistry: Atom economy and scope, Prevention/Minimization of hazardous/toxic products, designing safer chemicals, Selection of appropriate auxiliary substances (solvents, separation agents etc.), use of renewable starting materials, Avoidance of unnecessary derivatization-careful use of blocking/protection groups. Use of catalytic reagents (wherever possible) in preference to stoichiometric reagents, designing biodegradable products, Prevention of chemical accidents, Strengthening/development of analytical techniques to prevent and minimize the generation of hazardous substances in chemical processes. Development of accurate and reliable sensors and monitors for real time in process monitoring.</p> <p><i>Group project on various green process successfully employed in chemical industries</i></p> <p><i>Green chemistry is not costly: Classroom debate</i></p> <p><i>Chemistry and sustainable lifestyle: Peer Discussion</i></p>	CLO1
Unit-2 11 Hours	<p>Green Solvents: Role of solvents in chemical synthesis, Environmental and health concerns of organic solvents, need for alternative/cleaner solvents, Criteria for selection and design of green solvents Water: the natural solvent on earth, organic reactions: hydrophobic effects enhancing the reaction selectivities, low solubility of O₂ in water, water soluble catalysts, challenges in using water as solvent,</p> <p>Ionic liquids: physicochemical properties, Synthesis of Ionic Liquids, Directed Inorganic and Organometallic Synthesis, formation of oxides, electrochemical synthesis in ionic liquids,</p> <p>Glycerol: solvent properties, volatility, polarity, availability, glycerol as a solvent combining the advantages of water and ionic liquids, enhancement of reaction selectivity, glycerol as a solvent for catalyst design and recycling, separation processes and material synthesis in glycerol, examples of synthesis of transition metal and metal oxide crystals</p> <p>Supercritical fluids: supercritical CO₂ and its properties, advantages of using CO₂ as solvent, Synthesis of metal nanoparticles, CO₂ as solvent for coatings and lithography, biomaterial processing, other supercritical fluids.</p> <p><i>Industrial applications of green solvents: peer discussion in the classroom</i></p> <p><i>Project work on most polluting chemical industries</i></p> <p><i>Debate on the single use plastic</i></p>	CLO2

Unit-3 11 Hours	Microwave induced and ultrasound assisted green synthesis: Introduction to synthetic organic transformation under microwave (i) Microwave assisted reactions in water (ii) Microwave assisted reactions in organic solvents. (iii) Microwave solvent free reactions Ultrasound assisted reactions: Introduction, substitution reactions, addition, oxidation, reduction reactions. Biocatalysts in organic synthesis: Introduction, Biochemical oxidation and reductions. <i>Modern tools as source of energy for chemical reactions</i>	CLO3
Unit-4 12 Hours	Approaches to green synthesis: Use of green reagents: polymer supported reagents: peptide coupling reagents. Green catalysts, Phase-transfer catalysts in green synthesis. Advantages of PTC, Application of PTCs in C-alkylation, N-alkylation, S-alkylation. Darzens reaction, Williamsons synthesis, Wittig reaction, Click Chemistry. Use of Crown ethers in esterification, saponification. Micellar catalysis, Biocatalysis. <i>Role of Green reagents and their applications for the synthesis of diverse scaffolds through peer learning</i> <i>Implication and challenges of Biocatalysis in industrial setting through group presentation.</i>	CLO4

Course Title: Solid State Chemistry

L	T	P	Cr
3	0	0	3

Paper Code: CHM.560

Total Contact Hours: 45

Learning Outcome: After completion of this course, the students will be able to

CLO1: Physicochemical properties, defects in solid, diffraction techniques, electrical and magnetic properties of materials.

CLO2: The relationship between material structure and physical attributes associated with them.

CLO3: Advance applications of these materials.

Units/ hours	Content	Mapping with CLOs
Unit-1 15 Hours	<p>Solid State Structure: Primitive lattice vectors, reciprocal lattice, crystal systems and symmetry, Bravais lattices, lattice energy, crystal structure of diamond, NaCl, KCl, CsCl, TiO₂, etc.,</p> <p>Defects: Intrinsic and extrinsic defects, point, line and plane defects, vacancies, Schottky defects, Frenkel defects, Thermodynamic and structural aspects.</p> <p>Diffraction Methods: Basic concepts of X-ray, electron and neutron diffraction methods, structure of simple lattices and X-ray intensities, structure factor and its relation to intensity and electron density, phase identification, X-ray structure analysis, XRD and its applications, polymorphism and cocrystallization.</p> <p><i>Demonstration of characterization of these solid state materials like XRD.</i></p>	CLO1,
Unit-2 10 Hours	<p>Magnetic Materials (Ferrites) Introduction, structure and classification, Langevin diamagnetism, hard and soft ferrites, synthesis of ferrites by various methods (precursor and combustion method), characterization of ferrites by Mossbauer spectroscopy, significance of hysteresis loop and saturation magnetization in ferrites, magnetic properties of ferrites, applications of ferrites. Raman scattering in crystals, photoconduction, lasers, photovoltaic and photocatalytic effects.</p> <p><i>Relevance of the various aspects of Ferrites in various areas for sustainable development through brainstorming.</i></p>	CLO2
Unit-3 10Hours	<p>Semiconductor and Superconductors: Band theory, band gap, metals and semiconductors, intrinsic and extrinsic semiconductors, p-n junctions and other applications (optical activity).</p> <p><i>Debate on semiconductor materials and their optical and conduction character for device fabrication.</i></p>	CLO3
Unit-4 10 Hours	<p>Nanomaterials: Nanoparticles: zero dimensional nanostructure, homogeneous and heterogeneous nucleation, metallic nanoparticles- synthesis and applications; nanowires and nanorods: one dimensional nanostructures, spontaneous growth, VLS, electro spinning, lithography; thin film: two dimensional nanostructure- preparation techniques; Langmuir-Blodgett (LB) film growth techniques, photolithography properties and applications.</p> <p><i>Brainstorming session on the properties of low dimension materials formation.</i></p> <p><i>Concept of Nano dimension materials for modern applications.</i></p>	CLO3

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming.

Course Title: Polymer Chemistry

Paper Code: CHM.561

Total Lectures: 45

Learning Outcomes: The student upon completion of the course would be able to

CLO1: Elucidate the different mechanisms of polymerization.

CLO2: Demonstrate and compare the various polymer production methods and their key chemical kinetic parameters.

CLO3: Apply the various methods for determination of Number, weight and viscosity averaged molecular weights.

CLO4: Elucidate and demonstrate the processing of thermoplastic and thermosetting polymers.

CLO5: Apply the polymers for their use in biological and lifestyle applications.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
UNIT I 13 Hours	<p>Polymers Synthesis and Characterization: Classification of polymers. Types of polymerization processes: Bulk, solution, suspension and emulsion polymerization, their advantages and disadvantages. Addition, radical, ionic, coordination and condensation polymerization; their mechanism and role of initiator, chain transfer agent, solvent and inhibitor. Effect of structure of monomer on free-radical polymerization. Polymerization conditions and polymer reactions. Polymerization in homogeneous and heterogeneous systems. Method for reaction rate determination using Rotating disk method and Pulsed Laser Photolysis – Size exclusion chromatography (PLP-SEC).</p> <p><i>Learning use of various polymerization options by peer learning.</i></p>	CLO1 CLO2
UNIT II 11 Hours	<p>Polymer: Significance of molecular weight of polymer. Polydispersive average molecular weight. number, weight and viscosity average weights. Measurement of molecular weights. End group, viscosity, light scattering, osmotic and ultracentrifugation methods. Chemical and spectroscopic analysis of polymers. X-ray diffraction study.</p> <p>Polymer structure and physical properties: crystalline melting point T_m, melting points of homogeneous series, effect of chain flexibility and other steric factors, entropy and heat of fusion. The glass transition temperature, T_g relationship between T_m and T_g, effects of molecular weight, diluents, chemical structure, chain topology, branching and cross linking.</p> <p><i>Understanding the polymer molecular mass estimation and distribution using problem solving approach.</i></p>	CLO3
UNIT III 11 Hours	<p>Structure and properties: Configuration of polymer chains. Crystal structure of polymers, morphology of crystalline polymers. Thermal analysis, tensile strength, fatigue, impact, tear resistance, hardness and abrasion resistance.</p> <p>Polymer Processing: Plastics, elastomers and fibers. Compounding. Processing techniques, calendaring, die casting, rotational casting, film casting, injection moulding, blow moulding, extrusion moulding, thermoforming, foaming, reinforcing and fibre spinning.</p> <p><i>Analysis of polymer processing parameters using brainstorming session.</i></p>	CLO4

UNIT IV 10 Hours	<p>Applications of Polymers: Properties of polyethylene, polyvinyl chloride, polyamides, polyesters, phenolic resins, epoxy resins and silicone polymers. Functional polymers, fire retarding polymers and electrically conducting polymers. Biomedical polymers, contact lens, dental polymers, artificial heart, kidney, skin and blood cells.</p> <p>Biopolymers: The structure, function, and properties of synthetic (dextran, ficoll) and natural biopolymers (Cellulose, CMC, alginate, chitin, DNA, nucleic acids, nucleotides, proteins), conformation of nucleic acids (DNA, t-RNA, micro-RNA), molecular architecture for some biological structures such as collagen, tissue, silk, wool, and shell. Introduction to biomedical materials and drug delivery formulations.</p> <p><i>Game based and flipped learning of applications of polymers.</i></p>	CLO5
-----------------------------------	--	-------------

Course Title: Inorganic Photochemistry

Paper Code: CHM.562

Total Contact Hours: 45

Learning Outcomes: The student will be able to

CLO1: Inorganic photochemistry and photophysical chemistry.

L	T	P	Cr
3	0	0	3

CLO2: The characterization of transient intermediates by ultrafast modern techniques.

CLO3: The theory of photoreaction.

CLO4: The photochemistry and photophysical chemistry of macromolecules.

Units/ hours	Content	Mapping with CLOs
Unit-1 10 Hours	<p>Basics of Photochemistry: Electronic transitions, Jablonski diagram and photophysical processes, radiative transitions, absorption and emission, phosphorescence, intersystem crossing, mechanisms of singlet-triplet conversion (spin-orbit coupling), examples of ISC between states of different configurations, radiative rates, radiationless transitions, internal conversion, energy gap.</p> <p><i>Brainstorming on identification of the various photophysical process where electronic transitions of inorganic molecules are relevant to achieve sustainable development.</i></p>	CLO1,
Unit-2 10 Hours	<p>Photochemical Mechanism: Properties of excited states- structure, dipole moment, photochemical kinetics- calculation of rates of radiative process; bimolecular deactivation- quenching; excited states of metal complexes comparison with organic compounds, electronically excited states of metal complexes, charge transfer excitation.</p> <p><i>Demonstration of the inorganic photochemical reactions and discussion on their potential use as a replacement for artificial photosynthesis.</i></p>	CLO2
Unit-3 10Hours	<p>Ligand Field Photochemistry: Photosubstitution, photooxidation and photoreduction, ground state and excited state, energy content of the excited state, development of redox potentials of the excited states; redox reactions by excited metal complexes- energy transfer (FRET and SET), exciplex formation.</p> <p><i>Discussion on recent variants of well-established photochemical process.</i></p>	CLO3
Unit-4 15 Hours	<p>Applications of Photochemistry: Measurement of fluorescence and phosphorescence and lifetimes, introduction to time-resolved techniques for absorption and emission measurements, detection and kinetics of reactive intermediates, photochromic reactions and memory devices, sensors, switches and molecular machines, TiO₂ photocatalysis, flash photolysis.</p> <p><i>Application and challenges for the harvesting of energy via value added chemicals.</i></p>	CLO4

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial.

Course Title: Advanced Organic Synthesis

Paper Code: CHM.574

Total Contact Hours: 45

Learning Outcomes: The students will be able to

CLO1: Identify various asymmetric tools for the synthesis of chiral compounds.

CLO2: Design the synthesis of alkenes and functionalized molecules utilizing phosphorus, nitrogen and sulphur ylides.

CLO3: Explore various reagents for functional group conversions and synthesis of organic frameworks.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 12 Hours	<p>Asymmetric synthesis: Chiral pools, chiral catalysis: chiral auxiliaries, methods of asymmetric induction – substrate, reagent and catalyst controlled reactions; determination of enantiomeric and diastereomeric excess; enantio-discrimination. resolution – optical and kinetic, chemo- regio- and stereoselective transformations, organocatalysis and biocatalysis.</p> <p><i>Purpose and importance of chirality in various biologically active compounds and drug molecules (recent stringent FDA guidelines regarding chiral drugs) through brainstorming.</i></p>	CLO1
Unit-2 11 Hours	<p>Reaction of ylides: Phosphorus ylide; structure and reactivity, stabilized ylides, effects of ligands on reactivity, Wittig, Wittig-Horner and Wadsworth Emmons reactions-mechanistic realization; E/Z selectivity for olefin formation, Schlosser modification. Sulphur ylides; stabilized and non-stabilized ylides: thermodynamically and kinetically controlled reactions with carbonyl compounds, regio- and stereo-selective reactions. Nitrogen Ylides; Stevens rearrangement, Sommelet-Hauser rearrangement. Peterson's olefination.</p> <p><i>Peer group discussion on various methods to construct double bonds (including exocyclic double bonds) and respective advantages.</i></p>	CLO2
Unit-3 11 Hours	<p>Organometallic compounds: Organoboranes: Preparation of organoboranes viz hydroboration with $\text{BH}_3\text{-THF}$, dicyclohexylborane, disiamylborane, thexylborane, 9-BBN catalyzed hydroboration, functional group transformations of organoboranes: oxidation, protonolysis and rearrangements, formation of carbon-carbon-bonds viz organoboranes carbonylation. Chiral Organoboranes: diisopinocampheyl borane, alpine borane. Applications of organolithium, organozinc, organosilicon, organopalladium and organostannous compounds in C-C coupling reactions.</p> <p><i>Expression of the views of the students on latest advancement in the area of organoboranes including stereochemical aspects through presentation.</i></p>	CLO1, CLO3
Unit-4 11 Hours	<p>Reagents in organic synthesis: Gilman's reagent, Lithium diisopropylamide (LDA), 1,3-Dithiane (Umpolung reagent), Trimethylsilyl iodide, Baker's yeast, Woodward and Prevost reagents, Crown ether, Merrifield resin, Fenton's reagents, Ziegler-Natta catalyst, Lawesson reagent, IBX, Fetizon reagent, Dioxiranes, Tebbe reagent, Corey-Nicolaou reagent and macrolactonization, Mosher's reagent.</p> <p><i>Comparison on the reactivity and selectivity of various reagents through collaborative learning.</i></p>	CLO3

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming.

Course Title: Organotransition Metal Chemistry

Paper Code: CHM.576

Total Contact Hours: 45

Learning Outcome: At the end of this course student will be able to

CLO1: The chemistry of transition metal complexes and compounds of transition metal-carbon multiple bonds

CLO2: Chemistry on alkyls and aryls of transition metals and fluxional organometallic compounds

CLO3: Workout on homogeneous catalysis with appropriate planning.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit-1 10 Hours	Compounds of Transition Metal-Carbon Multiple Bonds: Metal Carbenes (Alkylidenes) and carbynes (alkylidyne)s complex-synthesis, nature of bond, structural characteristics, nucleophilic and electrophilic reaction on the ligands, role in organic synthesis. <i>Brainstorming on logistics behind formation and stability of various transition metals compounds.</i>	CLO1
Unit-2 15 Hours	Aliphatic Transition Metal Complexes: Transition metal complexes with alkyl and unsaturated organic molecules, alkenes, alkynes, allyl, diene, dienyl, and trienyl complexes, preparations, properties, nature of bonding and structural features important reactions relating to nucleophilic and electrophilic attack on ligands and to organic synthesis. <i>Group discussion on stability and reactivity of Main group element vs Transition metal complexes with alkyl and unsaturated organic molecules.</i>	CLO2
Unit-3 10 Hours	Aryls Transition Metal Complexes: Types, routes of synthesis, stability and decomposition pathways, applications in organic synthesis. <i>Discussion on recent variants of well-established transition metal catalyzed reactions.</i>	CLO3
Unit-4 10 Hours	Chemistry of Radioactive Materials: Classification of nuclides, nuclear stability, atomic energy, types of nuclear reactions-fission and fusion, nuclear decay laws, radioanalytical techniques, biological applications of radioactive materials. <i>Brainstorming discussion of nuclear reaction and atomic energy.</i>	CLO3

Mode of Transactions: Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial.

Course Title: Medicinal Chemistry-I

Paper Code: CMC.510

Course Hours: 45h

Learning Outcomes: After completing this course, the learner will be able to:

CLO1: Interpret basics concepts of drugs, their effects and screening.

CLO2: Describe drugs interaction with various types of enzymes and receptors

CLO3: Conceptualize the process of drug discovery and its progress

L	T	P	Credits
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit 1 10 Hours	<p>History of drug discovery Introduction, Drug discoveries, Recent trends in drug discovery, Enzymes as drug targets, Membrane transporters as drug targets, Voltage-gated ion channels as drug targets</p> <p><i>Exercise: Learner will be engaged in group discussion to explain history of drug discovery</i></p>	CLO1
Unit 2 11 Hours	<p>Drug discovery: Stages of drug discovery, lead discovery; identification, validation and diversity of drug targets</p> <p>Biological drug targets Receptors, types, binding and activation, theories of drug receptor interaction, drug receptor interactions, agonist vs antagonists, artificial enzymes.</p> <p>Measurement and expression of drug effects Introduction, <i>In-vitro</i> experiments, <i>Ex-vivo</i> experiments, <i>In-vivo</i> experiments.</p> <p><i>Exercise: Learner will be explained about drug interaction and target through molecular modeling studies</i></p>	CLO2

<p>Unit 3 12 Hours</p>	<p>Prodrug Design and Analog design</p> <p>Prodrug design Basic concept, Carrier linked prodrugs/ Bioprecursors, Prodrugs of functional group, Prodrugs to improve patient acceptability, Drug solubility, Drug absorption and distribution, site specific drug delivery and sustained drug action. Rationale of prodrug design and practical consideration of pro drug design.</p> <p>Combating drug resistance Causes for drug resistance, strategies to combat drug resistance in antibiotics and anticancer therapy, Genetic principles of drug resistance.</p> <p>Analog Design Introduction, Classical & Non classical, Bio isosteric replacement strategies, rigidanalogs, alteration of chain branching, changes in ring size, ring position isomers, design of stereo isomers and geometric isomers, fragments of a lead molecule, variation in inter atomic distance.</p> <p><i>Exercise :Learner will be engaged in Web based training to familiarize with prodrug and analog design</i></p>	<p>CLO3</p>
<p>Unit 4 12 Hours</p>	<p>a) Medicinal chemistry aspects of the following class of drugs Systematic study, SAR, Mechanism of action and synthesis of new generation molecules of following class of drugs: b). Anti-hypertensive drugs, Psychoactive drugs, Anticonvulsant drugs, H1 & H2 receptor antagonist, COX1 & COX2 inhibitors, Adrenergic & Cholinergic agents, Antineoplastic and Antiviral agents.</p> <p>c). Stereochemistry and Drug action: Realization that stereo selectivity is a pre-requisite for evolution. Role of chirality in selective and specific therapeutic agents. Case studies, enantioselectivity in drug adsorption, metabolism, distribution and elimination.</p> <p><i>Exercise: Learner will be engaged in Group discussion to explain SAR, Mechanism of action and synthesis of drugs</i></p>	<p>CLO3</p>

Course Title: Fundamentals of Computer Aided Drug Design

Paper Code: CMC.523

Course Hours: 45h

Learning outcome:

After completing this course, the learner will be able to:

CLO1: Describe the role of CADD in drug discovery

CLO2: Work with molecular modelling software's to design new drug molecules

CLO3: Design and develop new drug like molecules

L	T	P	Credits
3	0	0	3

Units/ hours	Content	Mapping with CLOs
Unit 1 12 Hours	<p>Introduction to Computer Aided Drug Design (CADD): History, different techniques and applications. Quantitative Structure Activity Relationships: Basics. History and development of QSAR: Physiochemical parameters and methods to calculate physiochemical parameters: Hammett equation and electronic parameters (sigma), lipophilicity effects and parameters (log P, pi-substituent constant), steric effects (Taft steric and MR parameters) Experimental and theoretical approaches for the determination of these physiochemical parameters. Hansch analysis, Free Wilson analysis and relationship between them, Advantages and disadvantages: Deriving 2D-QSAR equations. 3D- QSAR approaches and contour map analysis. Statistical methods used in QSAR analysis and importance of statistical parameters.</p> <p><i>Exercise: Learner will be engaged in group discussion to explain 2D-QSAR, 3D-QSAR and importance of statistical parameters</i></p>	CLO1
Unit 2 11 Hours	<p>Molecular Modeling and Docking:</p> <ul style="list-style-type: none"> a) Molecular and Quantum Mechanics in drug design. b) Energy Minimization Methods: comparison between global minimum conformation and bioactive conformation. c) Molecular docking and drug receptor interactions: rigid docking, flexible docking and extra-precision docking. Agents acting on enzymes such as DHFR, HMG-CoA reductase and HIV protease, choline esterase (AChE & BchE) <p><i>Exercise: Learner will be engaged in molecular modeling of compounds</i></p>	CLO2

Unit 3 10 Hours	Molecular Properties and Drug Design: a) Prediction and analysis of ADMET properties of new molecules and its importance in drug design. b) De novo drug design: Receptor/enzyme-interaction and its analysis, Receptor/enzyme cavity size prediction, predicting the functional components of cavities, Fragment based drug design. c) Homology modelling and generation of 3D-structure of protein. <i>Exercise: Learner will study Molecular model to explain interactions between ligand and drug target</i>	CLO3
Unit 4 12 Hours	Pharmacophore Mapping and Virtual Screening: Concept of pharmacophore, pharmacophore mapping, identification of Pharmacophore features and Pharmacophore's modelling; Conformational search used in pharmacophore mapping. In-silico Drug Design and Virtual Screening Techniques. Similarity based methods and Pharmacophore based screening, structure based In-silico virtual screening protocols. <i>Exercise: Learner will be engaged in Pharmacophore band structure based In-silico virtual screening protocols</i>	CLO2, CLO3

Course Title: Biomolecules and Bioenergetics

Total Hours: 45

Learning outcomes: Students will be able to

L	T	P	Cr
3	0	0	3

CLO1: Demonstrate the concepts of biomolecules and bioenergetics, various components of cells which are essential for energy generation and their biosynthesis.

CLO2: Apply and effectively communicate scientific reasoning and data analysis in both written and oral forums related to biomolecules and energetics of biochemical processes.

CLO3: Describe and correlate biomolecules and bioenergetics

Units/ hours	Content	Mapping with CLOs
Unit 1 12 Hours	<p>Carbohydrate: Classification, structure, stereochemistry, chemical properties epimerization, anomerization and mutarotation and reaction of carbohydrates, functions of polysaccharides starch, glycogen, cellulose and chitin, complex carbohydrates; amino sugars, proteoglycans and glycoproteins.</p> <p>Lipids: Classification, structure, properties and functions of fats and fatty acids, essential fatty acids, phospholipids, sphingolipids, cerebrosides, steroids, bile acids, prostaglandins, lipoproteins, proteolipids, phosphatidopeptides, lipopolysaccharides. Peer discussion on the existence of these biomolecules in different organisms.</p>	CLO1
Unit 2 11 Hours	<p>Buffers and Proteins: Classification, structure and properties of amino acids. The concept of pH, dissociation and ionization of acids and bases, pKa, buffers and buffering mechanism, Henderson Hasselbalch equation, ionization of amino acids and proteins, measurement of pH. Classification and properties of proteins, sequencing of proteins Primary (peptide conformation, N- and C- terminal, peptide cleavage), Secondary (α-helix, sheet, random coil, Ramachandran plot), Tertiary and Quaternary structures of proteins. Thermodynamics of Protein folding, coagulation and denaturation of proteins. Presentations on buffers and proteins properties and its constituents.</p>	CLO2
Unit 3 10 Hours	<p>Nucleic acids: Structure of purines, pyrimidines, nucleosides and nucleotides. Structure, types and biological role of RNA and DNA. Primary, secondary, and tertiary structure of nucleic acids, DNA forms and conformations, UV absorption and Denaturation of DNA, C-value paradox, Cot curve analysis. In depth discussion on the role of DNA modification and its effects.</p>	CLO3
Unit 4 12 Hours	<p>Bioenergetics: Laws of Thermodynamics, Concept of free energy, standard free energy, determination of ΔG for a reaction. Relationship between equilibrium constant and standard free energy change, standard free energy change in coupled reactions. Biological oxidation-reduction reactions, redox potentials, relation between standard reduction potentials & free energy change. High energy phosphate compounds – introduction, phosphate group transfer, free energy of hydrolysis of ATP and sugar phosphates along with reasons for high ΔG. Group discussion on analysis of thermodynamic parameters.</p>	CLO2, CLO3

Suggested Readings:

1. Outlines of Biochemistry. Eric E. Conn and Paul K. Stumpf (2006). 5th edition John Wiley and Sons, India edition.
2. Davidson, VL and Sittman, DB (1999) *Biochemistry* NMS, 4th ed. Lippincott. Williams and Wilkins.
3. Voet, D and Voet JG (2010) *Biochemistry*, 4th ed. Wiley
4. Rodwell V, Bender D, Botham KM, Kennelly PJ and Weil PA (2018) *Harper's Illustrated Biochemistry*. 31st ed. McGraw Hill.
5. Berg JM, Stryer L, Tymoczko JL, Gatto GJ (2018) *Biochemistry*, WH Freeman, 9th ed.
6. Lodish, H, Birk, A, et al. (2016) *Molecular Cell Biology*. 8th ed. WH Freeman.
7. Nelson DL and Cox MM (2017) *Lehninger's Principles of Biochemistry*, 7th ed. WH Freeman.

- Co-operative learning

Tools used

PPT, You tube Video, Google meet, NPTE

Course Title: Dissertation Part-I

Paper Code: CHM.600

Total Contact Hours: 120

Course Outcome: The student would be able to

CLO1: Investigate various aspects related to the chemistry problem.

CLO2: Generate interest in frontier areas of research in chemistry.

CLO3: Analyze the literature and bring forward the research gaps and propose hypotheses and tentative solutions.

L	T	P	Cr
0	0	8	4

Dissertation supervisor would be allocated at the start of the semester and entire dissertation would be undertaken in discussion with the supervisor. At the end of the semester the student has to prepare a research proposal/synopsis as per the university guidelines. Upon submission of the synopsis, the research proposal shall be evaluated based on a presentation of review of literature, research gap, objective, methodology and PERT Chart for the next semester for

sections of experimental work and compilation of dissertation.

Course Title: Dissertation Part-II

Paper Code: CHM.601

Total Contact Hours: 600

L	T	P	Cr
0	0	40	20

Learning Outcome: The student would be able to

CLO5: Understand the lacunas in the methodology to experimentation.

CLO6: Independently plan and execute experiments in the laboratory set-up

CLO7: Analyze and interpret the results obtained through different experiments.

CLO8: Apply their expertise and specific skills in the frontier area of research.

As per the defined objectives in the research proposal/synopsis, the student would carry out his experimentation to achieve these goals. The student would get experiments evaluated by the supervisor regularly, wherein the progress of the student would be evaluated. Upon achieving the objectives of the synopsis, the dissertation would be prepared as per the university guidelines for M.Sc. Dissertation in consultation with the supervisor. Dissertation would be verified for plagiarism and submitted for evaluation by committee.

Value Added Course (VAC)

Course Title: Protein Chemistry

Paper Code: CHM.528

Total Contact Hours: 30

Learning Outcome: The students will be able to interpret and analyze

CLO1: Structure and biological functions of proteins.

CLO2: The role of metals in biology

CLO3: Mechanism of protein folding

CLO4: The cause and treatment of neurodegenerative, iron metabolic disorder and diabetes.

L	T	P	Cr
2	0	0	2

Units/ hours	Content	Mapping with CLOs
Unit-1 8 Hours	Buffers; Amino Acids; Proteins: Function and Structure, Protein synthesis; Protein engineering and protein/protein interactions. <i>Group discussion regarding in-vivo and in vitro protein folding.</i>	CLO1
Unit-2 7 Hours	Structure and function of hemoglobin, myoglobin and transferrin; Iron metabolic disorders (anemia, Sickle cell anemia, thalassemia, hemochromatosis), Diabetes; Types of diabetes and its causes/prevention/treatment, Interlink between iron metabolic disorder and diabetes; Cancer and its causes/treatments. <i>Brainstorming regarding the role of metals in health and diseases and interlink between iron metabolic disorder and diabetes.</i>	CLO2
Unit-3 7 Hours	Protein folding and misfolding, Determination of protein structures and folding intermediates; In vitro analyses of off-pathway aggregation and amyloid formation; Key chaperones and chaperonins; <i>Peer group discussion on understanding how protein folds/misfolds and forms amyloid fibrillation and their treatment and diagnosis.</i>	CLO3
Unit-4 8 Hours	Practical implications in biotechnology; Special emphasis on human protein deposition diseases including Alzheimer's, Parkinson's and Huntington's disease. <i>Demonstration of role of chaperones and peptides on preventing amyloid fibril formation in human natively disordered proteins.</i>	CLO4

Mode of Transactions: Demonstration, Experimentation, handling instruments, Explanation of data

Course Title: Biological Inorganic Chemistry

Paper Code: CHM.531

Total Contact Hours: 30

Learning Outcome: At the end of this course student will be able to

CLO1: Determine the structure and biological functions of enzymes and metalloproteins.

CLO2: Classify the metallobiomolecules on the basis of their functional properties.

CLO3: Ascertain the role of metal ions and non-metals in the biological system.

L	T	P	Cr
2	0	0	2

Units/ hours	Content	Mapping with CLOs
Unit-1 8 Hours	<p>Co-ordination chemistry: Introduction to bioinorganic chemistry: biological roles of elements, Coordination Complexes, Characteristics of coordination compounds, Bonding in complexes, Coordination of metal ions in biological molecules. Pearson's Hard and Soft acids and bases: application to predict the stability of complexes.</p> <p><i>Peer discussion of selection of specific metal ions by specific enzyme. Deliberation on the role of metal ions in stabilization of protein structures.</i></p>	CLO1
Unit-2 7 Hours	<p>Alkali and Alkaline earth metal ions in biological systems: Regulatory role of Na⁺ and K⁺ ions. Sodium-potassium ATP-ase, Natural and synthetic ligands for alkali metal ions, Lithium as anti-mania agent, Calcium metabolism (absorption, excretion, hormonal control), The calcium signal, calcium binding proteins, role of Mg²⁺ in biological system, magnesium in cellular physiology.</p> <p><i>Brainstorming on the role of various metal ions in the functioning of various enzymes.</i></p>	CLO2
Unit-3 7 Hours	<p>Transition metal ions in biological system: Biochemistry of iron, Iron metabolism (absorption, transport, storage, hemosiderosis, hemochromatosis), Iron in hemoglobin, Heme proteins, Cytochrome P-450, Non-heme iron containing proteins. Iron-sulfur clusters, iron storage and transport, ferritin, transferrin. Iron overload disorder. Role of Cu in biological systems (Ceruloplasmin, Cytochrome c oxidase, Cu-Zn-superoxide dismutase, Tyrosinase), Wilson's disease, Menkes disease. Role of Mn, Ni, Mo, Co and Zn (Zn-finger proteins,) in the biological system. Role of toxic metals like Pb, Hg and Cd in the biological system. Chelation therapy and application of Deferasirox, DMSA. Application of cis-platin and Myocrisin.</p> <p><i>Group discussion on the role of metal ions in various disease conditions and chelation therapy.</i></p>	CLO3

Unit-4 8 Hours	<p>Inorganic chemistry of enzymes: Metalloporphyrins: Hemoglobin and myoglobin, nature of heme-dioxygen binding, model systems, cooperativity in hemoglobin, Bohr effect, structure and function of hemoglobin and myoglobin. Other iron-porphyrin biomolecules, peroxidases and catalases, cytochromes, cytochrome P450 enzymes, other natural oxygen carriers, hemerythrins, electron transfer. Metallothioneins: Ferredoxins, carboxypeptidase, carbonic anhydrase, blue copper proteins, superoxide dismutase and hemocyanins.</p> <p><i>Group discussion on artificial Iron-sulfur clusters.</i></p>	CLO1

Course Title: Spectroscopic and Chromatographic Techniques

Paper Code: CHM.532

Total Contact Hours: 30

Learning Outcome: At the end of this course student will be able to

L	T	P	Cr
2	0	0	2

- CLO1:** Explain the principle and instrumentation associated with various spectroscopic techniques.
- CLO2:** Identify spectroscopic techniques and their use in various streams for structure identification.

Units/ hours	Content	Mapping with CLOs
Unit-1 8 Hours	<p>UV-Visible spectroscopy: Electromagnetic spectrum. Interaction of electromagnetic radiation with matter and various transitions giving rise to ultraviolet and visible spectra. Intensity of bands. Instrumentation, theory and principle, how to run and analyze UV-Vis spectra.</p> <p>Infrared Spectroscopy: Theory and Instrumentation, Infrared radiation and its interaction with organic molecules, vibrational mode of bonds, Preparation of Samples for Infrared Spectroscopy, interpretation of IR spectra.</p> <p><i>Role of UV-Vis and IR techniques in research and industry through peer learning</i></p>	CLO1, CLO2
Unit-2 8 Hours	<p>Mass spectrometry: Basic principle and brief outline of instrumentation.</p> <p>Application of Mass Spectroscopy in Pharmaceutical, agricultural practices metabolomics, geoscience, food and nutrition domains.</p> <p>Ion formation techniques: EI, CI, FAB, MALDI, fragmentation process of molecules. High resolution mass spectrometry (HRMS). Inductively coupled plasma mass spectrometry (ICP-MS)</p> <p><i>Identification and interpretation of various peaks in the mass spectrum through demonstration.</i></p>	CLO1, CLO2
Unit-3 7 Hours	<p>Nuclear magnetic resonance spectroscopy (NMR): Basic principle of NMR and instrumentation. chemical shift (shielding of the nuclei by the local electronic structure) and factors influencing chemical shift, reference standards and NMR solvents. spin-spin coupling, coupling constants.</p> <p>¹³C NMR Spectroscopy.</p> <p><i>Interpretation of various peaks for structural identification through demonstration of various ¹H and ¹³C NMR spectrum.</i></p>	CLO1, CLO2
Unit-4 7 Hours	<p>Chromatographic Techniques: Principles and Fundamentals of chromatography, Thin Layer chromatography, Column liquid chromatography.</p> <p>HPLC: Applications of HPLC for identification, quantification and purification of the individual components of the mixture, HPTLC, Ion exchange chromatography.</p> <p><i>Latest research on the utility of HPLC and UPLC in pharmaceutical analysis of drugs through group presentation.</i></p>	CLO1, CLO2

Mode of Transactions: Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming
