

CENTRAL UNIVERSITY OF PUNJAB BATHINDA

SYLLABUS

M. Tech Computer Science & Engineering (Cyber Security)

Session - 2026-28

Department of Computer Science & Technology
Central University of Punjab, VPO-Ghudda, Bathinda, Punjab,
India- 151401

Programme Educational Objectives

PEO1: To build a rich intellectual potential embedded with inter-disciplinary knowledge, human values and professional ethics among the youth, aspirant of becoming technologists, so that they contribute to society and create a niche for a successful career.

PEO1: To enable students to gain research and development competence to sustain in academia as well as industry.

PEO1: To Produce "Creators of Innovative Technology".

Graduate Attributes:

After the Completion of Graduate Program student will be able:

- 1.To demonstrate competence in engineering mathematics, engineering fundamentals, and specialized engineering knowledge appropriate to the program.
- 2.To acquire appropriate knowledge and skills to identify, formulate, analyze, and solve computer engineering problems in order to reach substantiated conclusion.
- 3.To conduct investigations of problems by appropriate experiments, analysis and interpretation of data and synthesis of information in order to reach valid conclusions.
- 4.To design solutions for open-ended engineering problems for designing systems, components or processes that meet specified needs of program.
- 5.To create, select, apply, adapt, and extend appropriate techniques, resources, and modern engineering tools for a range of engineering activities.
- 6.To work effectively as a member and leader in teams, preferably in a multi-disciplinary setting.
- 7.To understand the role of engineer with professional and ethical responsibilities in the society for public interest.
- 8.To analyze social and environmental aspects of engineering activities.
- 9.To communicate complex engineering concepts within the profession and with society at large.
- 10.To appropriately incorporate economics and business practices including project, risk, and change management into the practice of engineering and to understand their limitations.
- 11.To identify and address their own educational needs in a changing world in ways sufficient to maintain their competence and advancements in future.
- 12.To apply professional ethics, accountability and equity.

Program Outcome

After the completion of degree program student will be able:

- 1 To apply mathematical foundations, algorithmic principles, and computer science theory in the modelling and design of security-based systems.
- 2.To apply the engineering knowledge in all domains, viz., Code security, Network Security, Program security, OS Security etc.
3. To design and conduct experiments as well as to analyze and interpret data for cyber security.
- 4.To analyze the problem, subdivide into smaller tasks with well-defined interface for interaction among security components, and complete within the specified time frame.
- 5.To propose original ideas and solutions, culminating into a modern, easy to use tool, by a larger section of the security professionals with longevity.

Mode of Transaction: Lecture, Laboratory based Practical, Seminar, Group discussion, Team teaching, Self-learning.

Evaluation Criteria for Theory Courses/or As per University Pattern

- A. Continuous Assessment/Internal Assessment: [25 Marks]
- B. Mid Semester Test: Based on Subjective Type Test [25 Marks]
- C. End Semester Test: Based on Subjective Type Test(70%) and Objective(30%) [50 Marks]

*Every student has to take up one ID courses of 02 credits from other disciplines in semester I of the program and Value Added Course of 2 credits in Semester II.

SEMESTER – I

Course Code: MCST.516L

Course Title: Research Methodology and IPR

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

To develop a research orientation among the students and help them understand fundamentals of research methods. The course will help the students to identify various sources of information for literature review, data collection and effective paper/ dissertation writing. Familiarize students with the concept of patents and copyright

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Explain effective methods to formulate a research problem.

CLO2: Analyze research related information and follow research ethics.

CLO3: Apply intellectual property law principles (including copyright, patents, designs and trademarks) to practical problems and be able to analyse the social impact of IPR.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 15 Hours	Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations.	CLO1
	Activities: Assignment based learning	
II 15 Hours	Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.	CLO2
	Activities: Exercise based learning and practical hands on training	
III 14 Hours	Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT	CLO3
	Activities: Case Studies	

IV 16 Hours	Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software, Integrated Circuits, etc.	CLO3
	Activities: Group discussion	

Transactional Modes:

- Lecture
- Case Studies
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Code: MCBS.516L

**Course Title: Mathematical and Statistical
Foundation of Computer Science**

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

To make students understand the mathematical fundamentals that is prerequisites for a variety of courses like Data mining, Network protocols, analysis of Web traffic, Computer security, Software engineering, Bioinformatics, Machine learning. To develop the understanding of the mathematical and logical basis to many modern techniques in information technology like machine learning, programming language design, and concurrency.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1:Describe the basic notions of discrete and continuous probability.

CLO2:Explain methods of statistical inference and understand the role of sampling distributions.

CLO3:Apply statistical analyses to solve problems of moderate complexity.

CLO4: Categorize mathematical models for various domain-specific analyses.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 15 Hours	Fundamentals of Probability and Distributions : Probability Mass and Density Functions Cumulative Distribution Functions (CDF) Common Probability Distributions: Binomial, Poisson, and Normal Expected Value, Variance, and Probabilistic Inequalities Kurtosis and Skewness Activities: Exercise-based learning with practical examples.	CLO1
II 15 Hours	Sampling Distributions, Point Estimation, and Statistical Inference Unbiased Estimators, Variance of Estimators, and Standard Error, Methods of Point Estimation: Method of Moments, Method of Maximum Likelihood, Bayesian Estimation, Tests on the Mean of Single and Two Sample Normal Distributions (Known and Unknown Variance), Non-parametric Tests for Difference in Two Means Activities: Analysis of live data from dataworld.org/Kaggle.com.Application of statistical methods to sample data.	CLO1, CLO2
	Statistical Methods and Graph Theory	

III 15 Hours	Basic Statistics: Measures of Central Tendency (Mean, Median, Mode) and Dispersion (Variance, Standard Deviation, Standard Error), Parametric vs Non-parametric Statistics, One-Way and Two-Way Analysis of Variance (ANOVA), Introduction to Fuzzy Set Theory, Graph Theory: Isomorphism, Planar Graphs, Graph Coloring, Hamilton Circuits, Euler Cycles	CLO2, CLO3
	Activities: Simulation based learning from web resources, Statistical analysis of real-world datasets (e.g., Kaggle) and graph theory exercises.	
IV 15 Hours	R Programming and Applications in Computer Science Introduction to R Programming, Functions, Control Flow, and Loops, Working with Vectors, Matrices, and Data Files, Statistical and Mathematical Operations in R, Applications in Data Mining, Machine Learning, Computer Security, Software Engineering, and Bioinformatics, Recent Trends in Mathematical Models and Distribution Functions in Computer Science (e.g., Soft Computing, Computer Vision)	CLO3, CLO4
	Activities: Hands-on exercises using R for statistical analysis and problem-solving in computer science domains.

Course Code: MCBS.517L

Course Title: Intrusion Detection System

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

This course aims to equip students with the ability to critically compare various tools and approaches for Intrusion Detection through quantitative analysis, enabling them to determine the most effective methods for minimizing security risks. Additionally, students will be able to identify and describe the essential components of intrusion detection systems and evaluate emerging IDS technologies based on the fundamental capabilities shared by all IDS solutions.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Apply knowledge of the fundamentals and history of Intrusion Detection in order to avoid common pitfalls in the creation and evaluation of new Intrusion Detection Systems.

CLO2: Evaluate the security of an enterprise and appropriately apply Intrusion Detection tools and techniques in order to improve their security posture.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 12 Hours	The state of threats against computers, and networked Systems- Overview of computer security solutions and why they Fail- Vulnerability assessment, firewalls, VPN's –Overview of Intrusion Detection and Intrusion Prevention- Network and Host-based IDS. Activities: Assignment based and numerical exercise based learning, Case study-based learning of different security mechanisms.	CLO1
II 14 Hours	Classes of attacks – Network layer: scans, denial of service, penetration – Application layer: software exploits, code Injection-Human layer: identity theft, root access-Classes of attackers-Kids/hackers/sop Hesitated Groups-Automated: Drones, Worms, Viruses. Activities: Assignment based and numerical exercise based learning, Case study-based learning of different security mechanisms.	CLO1
III 16 Hours	A General IDS model and taxonomy, Signature-based Solutions, Snort, Snort rules, Evaluation of IDS, Cost sensitive IDS Anomaly Detection Systems and Algorithms-Network Behaviour Based Anomaly Detectors (rate based)-Host-based Anomaly Detectors-Software Vulnerabilities- State transition, Immunology, Payload Anomaly Detection. Activities: Assignment based and numerical exercise based learning, Case study-based learning of different	CLO2

	security mechanisms.	
IV 18 Hours	Attack trees and Correlation of Alerts-Autopsy of Worms and Botnets-Malware Detection-Obfuscation, Polymorphism-Document vectors. Email/IM security Issues-Viruses/Spam-From signatures to thumbprints to zero day. Detection-Insider Threat Issues-Taxonomy-Masquerade and Impersonation-Traitors, Decoys and Deception-Future: Collaborative Security. Activities: Assignment based and numerical exercise based learning, Case study-based learning of different security mechanisms.	CLO2

Transactional Modes:

- Lecture
- E-tutorial
- Collaborative Learning
- Peer Learning/Teaching
- Online Teaching Tools

2. Jakobsson, M., and Ramzan, Z. (2008). Crimeware, Understanding New Attacks and Defenses, United States: Symantec Press.
3. Research Articles from SCI & Scopus indexed Journals.

Course Code: MCBS.518L
Course Title: Cryptography
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to provide students with a comprehensive understanding of the foundational concepts and mathematical principles underlying cryptography. It aims to develop students' knowledge of the evolving landscape of security, including its needs, trends, services, and techniques. The course will enable learners to analyze and apply classical and modern symmetric cryptographic algorithms, as well as understand the design and operation of asymmetric key cryptography and cryptographic hash functions. Furthermore, students will be equipped to evaluate and compare user authentication mechanisms and explore security implementations across various layers of network architecture, preparing them for advanced study and application in the field of information security.

Course Learning Outcomes:

CLO1: Explain the Mathematics of Cryptography and need, trends, services and techniques of security.

CLO2: Discuss the various Classical Cryptographic and Symmetric Key Cryptography algorithms.

CLO3: Learn the various Asymmetric Key Cryptography and Hash function algorithms.

CLO4: Compare the various User Authentication Mechanisms

CLO5: Describe the security at various layers.

Units/Hours	Contents	Mapping with Course Learning Outcome
Unit-I 15 Hours	Mathematics of Cryptography- Prime and Composite Numbers, Greatest Common Divisor, Euclidean algorithm, Modulo arithmetic, Fermat's little theorem, Multiplicative Inverse, Euler's theorem and Totient function, Discrete logarithm. Introduction to Security: Need for security, Security Trends, Security Attacks, Security Services, Security Mechanisms. Security techniques: Plaintext, Cipher text, Encryption & Decryption, Cryptanalysis techniques.	CLO1
	Activities: Assignment based and numerical exercise based learning, Case study based learning of different security mechanisms.	

Unit-II 15 Hours	Classical Cryptographic Algorithms: Substitutions techniques- Monoalphabetic ciphers, Polyalphabetic Ciphers, Transposition Techniques, and Cryptanalysis of classical cryptographic algorithms. Symmetric Key Cryptography: Algorithm types & Modes: - Electronic Codebook (ECB), Cipher Block Chaining (CBC), Cipher Feedback (CFB) Output Feedback (OPFB) Mode, Counter (CTR) Mode. Morden symmetric key Cryptographic Algorithms: Data Encryption Standard (DES), Triple DES, RC4, IDEA, Advance Encryption Algorithm (AES), Cryptanalysis. Activities: Assignment based and numerical exercise based learning, Implementation of various cryptographic algorithms using computer programming.	CLO2
Unit-III 15 Hours	Asymmetric key Cryptographic Algorithms:- Public-Key Cryptography Principles, Diffie–Hellman key exchange algorithm, Knapsack algorithm, RSA. Message Authentication: Approaches to Message Authentication, MD5, SHA-512, Digital Signature: Comparison, Process, Services, Attacks on Digital Signature, Digital Signature Scheme. User Authentication Mechanism: Authentication basics, Passwords, Authentication tokens, Certificate based & Biometric authentication. Activities: Implementation and web based simulation of various cryptographic algorithms.	CLO3 CLO4
Unit IV 15 Hours	Security at the Application Layer: Email: E-mail Architecture, E-mail Security, Secure Electronic Transaction, Security at the Transport Layer: Secure Socket Layer (SSL), Transport Layer Security (TLS). Activities: Brainstorming, assignment based learning	CLO5

Transactional Modes:

- Lecture
- Blended Learning
- Collaborative Learning
- Case Study
- Online Teaching Tools

Course Code: MCBS.519L

Course Title: Python Programming for Cyber Security

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to introduce students to the fundamental concepts of Python programming, enabling them to gain a solid understanding of the language. It provides learners with the opportunity to explore and work with various Python modules, enhancing their coding proficiency. Through hands-on practice and implementation, students will develop the ability to write Python code to perform a wide range of programming tasks effectively.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Use basics python programming constructs and various Python modules required for accessing operating system and Network.

CLO2: Write scripts in Python language for Network related activities.

CLO3: Prepare python scripts to perform activities related to forensics.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 16 Hours	Python Introduction, Installing and setting Python environment in Windows and Linux, basics of Python interpreter, Execution of python program, Editor for Python code, syntax, variable, types. Flow control: if, ifelse, for, while, range() function, continue, pass, break. Strings: Sequence operations, String Methods, Pattern Matching.	CLO1
	Activities: Implementation and solution of real time problem.	
II 16 Hours	Lists: Basic Operations, Iteration, Indexing, Slicing and Matrixes; Dictionaries: Basic dictionary operations; Tuples: Basic Tuple operations; Functions: Definition, Call, Arguments, Scope rules and Name resolution; Modules: Module Coding Basics, Importing Programs as Modules, Executing Modules as Scripts, Compiled Python files(.pyc), Standard Modules: OS and SYS, The dir() Function, Packages.	CLO1

	Activities: Assignment based Learning of real time problem.	
III 14 Hours	Input output and file handling, Object Oriented Programming features in Python: Classes, Objects, Inheritance, Operator Overloading, Errors and Exceptions: try, except and else statements, Exception Objects, Regular expressions, Multithreading, Modules to handle multidimensional data: Numpy, Panadas, Files.	CLO1
	Activities: Analysis of cyber security related data.	
IV 14 Hours	Networking: Socket module, Port Scanning, Packet Sniffing, Traffic Analysis, TCP Packet Injection, Log analysis. HTTP Communications with Python built in Libraries, Web communications with the Requests module, Forensic Investigations with Python: geo-locating, recovering deleted items, examining metadata and windows registry.	CLO2 CLO3
	Activities: Analysis of real world data from Kaggle.com/dataworld.org website Implementation of various cyber security related tasks.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Code: MCBS.520L

Course Title: Information Theory

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to provide students with an insightful understanding of information theory and its significance in the field of communication and data processing. It aims to familiarize students with various coding techniques and error correction mechanisms, laying a strong foundation for reliable data transmission. The course also offers students the opportunity to compare and contrast different coding methods, enabling them to critically analyze and select appropriate techniques for specific applications.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe the principles and applications of information theory.

CLO2: Demonstrate how information is measured in terms of probability and entropy.

CLO3: Compare coding schemes, including error correcting codes.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 16 Hours	Information and entropy information measures, Shannon's concept of Information. Channel coding, channel mutual information capacity (BW). Theorem for discrete memory less channel, information capacity theorem, Error detecting and error correcting codes.	CLO-1 CLO-2
	Activities: Assignment based and numerical exercise based learning.	
II 15 Hours	Types of codes: block codes, Hamming and Lee metrics, description of linear block codes, parity check Codes, cyclic code, Masking techniques.	CLO-3
	Activities: Assignment based and numerical exercise based learning, Demonstration of above theory using MATLAB tools.	
III 13 Hours	Compression: loss less and lossy, Huffman codes, LZW algorithm, Binary Image c compression schemes, run length encoding, CCITT group 3 1- D Compression, CCITT group 3 2D compression, CCITT group 4 2DCompression.	CLO-3
	Activities: Assignment based and numerical exercise based learning, Demonstration of above theory using MATLAB tools.	

IV 16 Hours	Convolutional codes, sequential decoding. Video image Compression: CITT H 261 Video coding algorithm, audio (speech) Compression. Cryptography and cipher. Case study of CCITT group 3 1-DCompression, CCITT group 3 2D compression. Case Study of Advanced compression technique and Audio compression.	CLO-3
	Activities: Assignment based and numerical exercise based learning, Case based learning of different compression algorithms.	

Transactional Modes:

- Lecture
- Blended Learning
- Collaborative Learning
- Peer Learning/Teaching
- Online Teaching Tools

6. Research Articles from SCI & Scopus indexed Journals.

Course Code: MCBS.521L
Course Title: Number Theory
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to introduce students to the foundational principles of cryptography and information theory. It aims to develop an understanding of how mathematical concepts are applied in securing data and communications. The course encourages students to explore the interdisciplinary nature of cryptography, fostering an appreciation for its applications in modern research and technology.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe the basic concepts of number theory and uses of number theoretic concepts and logics in deep learning of cryptography and cryptographic techniques.

CLO2: Develop mathematical concepts, logics towards solving cryptographic problems and design new or modify existing cryptographic techniques.

CLO3: Solve techniques such as data collections, data analyzing and pattern reorganization etc, and to establish strong relations between mathematics and cyber security techniques.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 12 Hours	Number Systems: Natural numbers, Mathematical induction, Recurrence relations, The Division Algorithm, Catalan Numbers, Prime and Composite Numbers, Fibonacci and Fermat Numbers Greatest Common Divisor, Euclidean algorithm, Fundamental theorem of Arithmetic.	CLO-1
	Activities: Assignment based and numerical exercise based learning, Demonstration of above theory using Mathematica/MATLAB tools.	
II 14 Hours	Diophantine equations: Modulo arithmetic, Congruence classes, Modular Exponentiation, Towers of Powers Modulo m, Linear Congruences, Multiplicative inverse.	CLO-2
	Activities: Assignment based and numerical exercise based learning, Demonstration of above theory using Mathematica/MATLAB tools.	

III 16 Hours	Systems of Linear Congruences, Chinese remainder theorem, Wilson's Theorem, Euler's extended algorithm, Fermat's little theorem, Multiplicative Functions, Totient function, Euler's theorem.	CLO-3
	Activities: Assignment based and numerical exercise based learning, Demonstration of above theory using Mathematica/MATLAB tools.	
IV 18 Hours	Elementary number theory: Prime numbers, Number bases, Primality testing algorithm, Primitive Roots and Indices, The Order of a Positive Integer, discrete logarithm, primitive roots for Primes, Number sieves, The Algebra of Indices, Quadratic Residues.	CLO-3 CLO-1
	Activities: Assignment based and numerical exercise based learning, Demonstration of above theory using Mathematica/MATLAB tools.

Course Code: MCBS.522L
Course Title: Ethical Hacking
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to familiarize students with the fundamental principles of Ethical Hacking, enabling them to understand the methodologies, tools, and techniques used by ethical hackers to identify and address security vulnerabilities. The course aims to build a foundational understanding of cybersecurity from an ethical standpoint, preparing students to apply these techniques responsibly in practical scenarios to enhance system security.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Explain the core concepts related to vulnerabilities and their causes.

CLO2: Discuss ethics behind hacking and vulnerability disclosure.

CLO3: Demonstrate the impact of hacking.

CLO4: Design methods to extract vulnerabilities related to computer system and networks using state of the art tools and technologies.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 13 Hours	Ethical hacking process, Hackers behaviour & mindset, Maintaining Anonymity, Spoofing: IP spoofing, MAC Spoofing, DNS spoofing. Physical security vulnerabilities and countermeasures. Internal and External testing. Types of malware (Trojan, virus, worms, etc.), advanced persistent threat and file-less malware. Preparation of Ethical Hacking and Penetration Test Reports and Documents, Cyber Kill Chain & MITRE ATT&CK Framework, Zero-day vulnerabilities & CVE ecosystem, Bug bounty platforms (HackerOne, Bugcrowd) .	CLO1 and CLO2
	Activities: Brainstorming, assignment based learning	

II 17 Hours	Foot Printing and Reconnaissance: Information gathering using advanced search engines, archive.org, netcraft, whois, host, dig, dnsenum and NMAP tool. Google Dorks. Searching Vulnerabilities using Shodan. Password attack. Denial of service (DoS) attacks and Distributed DoS (DDoS) attack. Types of DoS attacks, Social Engineering attacks and countermeasures, Censys, and FOFA. OSINT tools: Maltego, SpiderFoot.	CLO3 and CLO 4
	Activities: Exercise based learning and practical hands on training	
III 14 Hours	Network Infrastructure Vulnerabilities: Packet sniffing using Wireshark and Burpsuite, ARP Cache Poisoning attack, Wireless Hacking: Wireless footprint, Wireless scanning and enumeration, Gaining access, (hacking 802.11), WEP, WPA, WPA2, WPA3. Evil Twin Attack, Jamming attacks. firewall, Intrusion Detection System (IDS), and Honeypot evasion techniques, enterprise Wi-Fi	CLO3 CLO 4
	Activities: Exercise based learning and practical hands on training	
IV 16 Hours	Installing and using Kali Linux Distribution, Introduction to penetration testing tools in Kali Linux. Introduction to Metasploit: Metasploit framework, Metasploit Console, Payloads, Metpreter, Introduction to Armitage, Attacks using Metasploit framework: Exploiting remote System, privilege escalation, remote code execution, Client-side browser exploits. Exploiting mobile devices, Use of LLMs in reconnaissance & exploit generation.	CLO3 and CLO 4
	Case Studies of recent vulnerabilities and attacks. Activities: Exercise based learning and practical hands on training

Course Title: Linux OS and Scripting

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to familiarize students with the Linux operating system environment, enabling them to execute standard commands and navigate the Linux interface effectively. The course aims to equip students with the skills required to develop and customize Linux shell programs while utilizing a wide range of standard Linux development and programming tools. Additionally, it focuses on building the necessary competencies for system-level programming, including inter-process and intra-process communication techniques.

Course Learning Outcomes:

CLO1: Understand effective use of linux utilities

CLO2: Describe the basics of shell scripting language.

CLO3: Apply the concepts of control structure, loops, case and functions in shell programming.

CLO4: Design the Real-Life Scripting

Units/Hours	Contents	Mapping with Course Learning Outcome
Unit 1 16 Hours	Linux basics: Creating First Virtual Machine, Linux Installation, basics of linux, basic commands, variables, aliases, advanced commands, using help/wildcards, soft/hard links, backup/restore using tar, mounting/unmounting, stdin/stdout/stderr.	CLO1
	Activities: Assignments and Group Discussion.	

Unit-II 14 Hours	Shell Scripting Basics: Shell Scripting Basics, Kernel, Shell, Shell Scripting, Types of Shells, Starting a Shell, Run a Shell Script. Scripting Standards: Scripting Standards, Scripts Naming Convention, Script File Permissions, Shell Script Format, Sequence of Script Execution.	CLO2
	Activities: Brainstorming, assignment-based learning	
Unit-III 14 Hours	Shell Scripting: First Script - Hello World, Run Basic Tasks - Script, Run Basic Administration Tasks, Defining Variables, Input/Output Script, Conditions/If Else Statements Scripts, Case Statements Script, For-Loop Script, do-while Scripts.	CLO3
	Activities: Hands on experience and Brainstorming.	
Unit-IV 16 Hours	Real Life Scripting: Real Life Scripting, Accessing Data from a File, Check Remote Servers' Connectivity, Script to Delete Old Files, Copy Files to Remote Hosts, User Directory Assignment, Exploitation scripting: Building exploits with Python, Creating Metasploit Exploits.	CLO4
	Activities: Hands on experience and Brainstorming.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Code: MCBS.524L

Course Title: Advanced Data Structures and Algorithms

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The outcome of this course is to provide in-depth knowledge of different advance data structures. Students should be able to understand the necessary mathematical abstraction to solve problems. To familiarize students with advanced paradigms and data structure used to solve algorithmic problems.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe various types of Advance data structures and list their strengths and weaknesses.

CLO2: Classify non-randomized and randomized data structures.

CLO3: Design and analyse algorithms using appropriate data structures for real-world problems, i.e., pattern matching and security.

CLO4: Summarize suitable data structure for computational geometry problems.

Units/Hours	Contents	Mapping with Course Learning Outcome
Unit 1 15 Hours	Introduction to Basic Data Structures: Importance and need of good data structures and algorithms. Hashing: Review of Hashing, Hash Function, Collision Resolution Techniques in Hashing, Separate Chaining, Open Addressing, Introduction to Hash Tables, Linear Probing, Quadratic Probing, Double Hashing, Rehashing, Extendible Hashing.	CLO1, CLO3

	Bloom Filter: Introduction to Bloom Filters, Working of Bloom Filter, Applications of Bloom Filters	
	Learning Activities: Implementation and solution of algorithms, Exercise based learning	
Unit-II 15 Hours	Skip Lists: Need for Randomizing Data Structures and Algorithms, Search and Update Operations on Skip Lists, Probabilistic Analysis of Skip Lists, Deterministic Skip Lists. Binary Search Trees, AVL Trees, Red Black Trees, 2-3 Trees, Splay Trees.	CLO2, CLO3
	Learning Activities: Visual Modelling Of Data structure.	
Unit-III 15 Hours	Advanced String-Matching Algorithms: Naïve string-matching algorithm, Rabin-Karp algorithm, String matching with finite automata, Knuth-Morris-Pratt algorithm. Standard Tries, Compressed Tries, Suffix Tries. Data Structures for Cryptographic Algorithms: Merkle trees, Bit Array, Circular Buffers, Priority Queues, Message Digest in Information security	CLO3
	Activities: Implementation of algorithms and assignment based learning.	
Unit-IV 15 Hours	Computational Geometry: One Dimensional Range Searching, Two Dimensional Range Searching, Constructing a Priority Search Tree, Searching a Priority Search Tree, Priority Range Trees, Quadrees, k-D Trees. One or more of the following topics based on time and interest Approximation algorithms, Randomized Algorithms, Interior Point Method.	CLO4
	Activities: Implementation and solution of algorithms, case study of recent algorithm trends.	

Transactional Modes:

- Lecture
- Blended Learning
- Collaborative Learning

- Peer Learning/Teaching
- Online Teaching Tools

Course Title: Advanced Data Structures and Algorithms -Lab

Total Hours: 60

L	T	P	Cr
0	0	4	2

Course Objectives:

The objective of this course is to provide students with hands-on experience in implementing advanced data structures and algorithms to solve complex computational problems efficiently. The course aims to strengthen students' understanding of algorithm design and analysis through practical experimentation with structures such as AVL trees, B-trees, heaps, graphs, and hashing techniques. By working through a range of coding exercises and real-world problem scenarios, students will develop proficiency in writing optimized, modular, and reusable code. This lab also fosters critical thinking and debugging skills necessary for high-performance software development.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Design and analyse different data structures

CLO2: Identify the appropriate data structure for a given algorithm.

CLO3: Implement various data structures and algorithms.

Lab Assignments

As per the teaching Learning in the Theory Class

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40

Total	100
--------------	------------

Suggested Readings:

1. Lab Manual
2. Allen Weiss M. (2014). Data Structures and Algorithm Analysis in C++. New Delhi: Pearson Education

Course Code: MCBS.526P

Course Title: Intrusion Detection System Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objective of this course is to familiarize students with the practical aspects of Intrusion Detection Systems (IDS), enabling them to simulate, implement, and analyze various IDS techniques and tools. The lab offers an experiential learning environment where students gain exposure to both signature-based and anomaly-based detection methods, and learn to work with real-world IDS platforms like Snort, Suricata, or Bro/Zeek. The course aims to develop students' skills in identifying potential security threats, configuring IDS rules, analysing alerts, and evaluating system performance to mitigate cyber-attacks effectively.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Apply knowledge of the fundamentals of Intrusion Detection in order to avoid common pitfalls in the creation and

CLO2: Implement new Intrusion Detection Systems.

CLO3: Evaluate Intrusion Detection tools and techniques in order to improve their security posture.

Lab Assignments

Practical will be based on as per the teaching Learning in the Theory Class

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40

Total	100
--------------	------------

Suggested Readings:

1. Lab Manual
2. Szor, P. (2010). The Art of Computer Virus Research and Defense, United States: Symantec Press.

Course Code: MCBS.527P

Course Title: Python Programming for Cyber Security Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The outcome of this lab course is to provide a practical introduction to python programming and its use in performing activities related to cyber security. Another objective of this lab is to demonstrate the use of various packages for cyber security.

Course Learning Outcomes:

After Completion of the lab course the students will be able to:

CLO1: Create and demonstrate script in Python by using basic constructs and control statements of Python.

CLO2: Illustrate the use of OOPS and file handling concept for data handling and visualisation.

CLO3: Develop python scripts to perform various activities related to ethical hacking.

CLO4: Develop python scripts to perform various activities related to cyber forensics.

Students will implement the lab practical as per the syllabus of the subject.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The evaluation of lab criteria will be based on following parameters:

Component	Marks
Continuous Evaluation	60

End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual

Course Code: MCBS.528P

Course Title: Cryptography Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objective of this course is to introduce students to the foundational concepts of security, including the various types of attacks that can compromise system integrity. It aims to provide a thorough understanding of both Symmetric and Asymmetric Key Cryptography techniques, enabling students to grasp their mechanisms, applications, and significance in securing communication. Additionally, the course discusses key application layer protocols, helping students comprehend their roles and vulnerabilities within a secure network architecture.

Course Learning Outcomes::

CLO1: Identify the domain specific security issues.

CLO2: Implement Symmetric & Asymmetric Key Cryptography algorithms.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Course Title: Ethical Hacking Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objective of this course is to provide students with hands-on experience in ethical hacking tools and techniques used to identify and mitigate security vulnerabilities in computing systems. It aims to enhance students' understanding of network, web, and system-level threats by allowing them to practically apply ethical hacking methodologies in controlled environments. The course fosters skill development in penetration testing, vulnerability assessment, and the use of various open-source and commercial tools, thereby preparing students to contribute effectively to organizational cybersecurity.

Course Learning Outcomes::

Upon successfully completing this course, students will be able to:

CLO1: Select appropriate tool for various activities related to ethical hacking

CLO2: Design an ethical hacking plan

CLO3: Identify various vulnerabilities

CLO4: Write test reports

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual
2. Baloch, R. (2015). Ethical Hacking and Penetration Testing Guide. London: CRC Press.

Course Code: MCBS. 532P**Course Title: Linux OS and Scripting Lab****Total Hours: 30**

L	T	P	Cr
0	0	2	1

Course Objectives: The Linux OS and Scripting Lab aims to provide students with hands-on exercises that reinforce their understanding and knowledge of various linux commands and scripting aspects.

Course Learning Outcomes:

CLO1: Demonstrate the use of various linux commands.

CLO2: Implement various scripts.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual

Course Code: MCBS.530P
Course Title: Information Theory Lab
Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objective of this course is to provide deeper knowledge about information theory and entropy concepts, enabling students to understand the fundamental principles of data representation and transmission. It aims to deliver an in-depth understanding of various coding techniques such as block codes, cyclic codes, and parity check codes, which are essential in error detection and correction. The course also focuses on developing practical skills through hands-on experience with both lossless and lossy compression techniques. Furthermore, it equips students with the knowledge required to apply advanced compression methods in real-world scenarios.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Determine the various entropies and mutual information for different channels.

CLO2: Construct the codes to secure the information during communication using different coding techniques.

CLO3: Implement and analyse the source coding and channel coding for transmitting the different objects like text, speech etc.

CLO4: Analyse the performance of coded and un-coded communication systems based on error probability.

CLO5: Implement and analyse different compression techniques for different objects like Image, Video and Audio etc.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

Course Title: Number Theory Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objective of this course is to provide a deeper understanding of the principles and practical applications of number theoretic algorithms. It aims to help students identify how number theory forms the foundation for designing cryptographic algorithms. Additionally, the course offers both theoretical knowledge and hands-on experience, enabling students to apply number theoretic algorithms and theorems to solve research problems across various fields.

Course Learning Outcomes:

At the end of the course the student will be able to:

CLO1: Implement and analyse the Number Theoretic algorithms.

CLO2: Implement the Fermat's theorem, Euler's theorem and Chinese remainder theorem to solve Congruences equations appear in different research problem.

CLO3: Implement and analyse the Primality test and factorization algorithms to understand the various cryptosystems.

CLO4: How to use Number Theoretic concepts in various research problems of Computer Science and in other fields.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual

SEMESTER –II

Course Code: MCST. 533L
Course Title: Machine Learning
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

To help students explain the concept of how to learn patterns and concepts from data without being explicitly programmed. To analyze various machine learning algorithms and techniques with a modern outlook focusing on recent advances.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe machine learning approaches.

CLO2: Discuss features that can be used for a particular machine learning approach in various applications.

CLO3: Compare and contrast pros and cons of various machine learning techniques.

CLO4: To mathematically analyze various machine learning approaches and paradigms.

CLO5: Formulate various machine learning and ensemble methods for use in IOT applications.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 16 Hours	Introduction to learning Techniques: Supervised Learning (Regression/Classification) Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes Linear models: Linear Regression, Logistic Regression, Generalized Linear Models Support Vector Machines, Nonlinearity and Kernel Methods Beyond Binary Classification: Multi-class/Structured Outputs, Ranking	CLO1

	Activities: Brainstorming, assignment-based learning.	
II 14 Hours	Unsupervised Learning Clustering: K-means/Kernel K-means Dimensionality Reduction: PCA and kernel PCA Matrix Factorization and Matrix Completion Generative Models (mixture models and latent factor models)	CLO1 CLO 2
	Activities: Exercise based learning and practical hands on training	
III 14 Hours	Evaluating Machine Learning algorithms and Model Selection, Introduction to Statistical Learning Theory, Ensemble Methods (Boosting, Bagging, Random Forests). Sparse Modeling and Estimation, Modeling Sequence/Time-Series Data, Deep Learning and Feature Representation Learning.	CLO2 CLO4
	Introduction to ANN and Deep learning. Activities: Exercise based learning and practical hands on training	
IV 16 Hours	Scalable Machine Learning (Online and Distributed Learning) A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference. Federated Learning: Privacy-Preserving Model Training, Covers Architecture(Cross Device vs Cross-silo), aggregation Methods, Model Hosting: ML in Operation, Deployment of ML algorithm for production, Model Governance and performance in production Environment Simulation Tool for Machine Learning, Hands on with recent tools WEKA, R MATLAB. Recent trends in various learning techniques of machine learning and classification methods for IOT applications. Various models for IOT applications.	CLO2 CLO5
	Activities: Analysis of various case studies.

Course Title: Multimedia Security

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

Provide a framework to conduct research and development using multimedia security techniques. Impart the knowledge of implementation on digital watermarking and multimedia security techniques. Design a customary multimedia security system to suit real world applications.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Learn the basic watermarking techniques to design a good digital mark.

CLO2: Study the digital authentication and authorization schemes to evaluate security issues related to electronic documents, images and video.

CLO3: Analyze the basic characteristics of digital watermarking to perform the theoretical analysis and performance measures.

CLO4: Acquire the concepts of steganography to access the sensitive information concealing of file, message, image, or video within another file.

CLO5: Examine the multimedia encryption techniques to address the open issues related to the confidentiality of the media content.

Units/Hour s	Contents	Mapping with Course Learning Outcome
I 16 Hours	Digital Watermarking: Introduction, History, Classification (Characteristics and Applications), Types and Techniques (Spatial-domain, Frequency-domain, Watermark security & authentication. Watermarking techniques: non-cryptographic and cryptographic; encoding and decoding; partial encryption, : Adversarial Attacks in Multimedia Systems	CLO-1 CLO-2
	Activities: Lab based practices for above concepts. Simulation based Learning.	

II 16 Hours	Watermarking for Streaming Media, Forensic Watermarking, Robustness to Temporal and Geometric Distortions, Affine resistant transformation. Attacks and Tools (Attacks by Filtering, Remodulation, Distortion, Geometric Compression, Linear Compression etc.),	CLO-1 CLO-2
	Activities: Lab based practices for above concepts. Assignment based learning	
III 16 Hours	Steganography: Overview, History, Modern Steganography, Steganography Channels, Steganography Goals Methods for hiding (text, images, audio, video, speech etc.), Issues: Security, Capacity and Imperceptibility, Difference between Watermarking and Steganography. Steganography in Social Media Platforms, Frameworks for secret communication (Pure Steganography, Secret key, Public key steganography), Steganography techniques. Steganalysis: Active and Malicious Attackers, Active and passive steganalysis. Activities: Lab based practices for above concepts.	CLO-3
IV 16 Hours	Multimedia Security Threats, Multimedia Threat Intelligence, Multimedia-based Ransomware Attacks, Multimedia Data forgeries – Techniques, detection and prevention mechanisms, Multimedia Encryption, Multimedia Forensics (tampering detection), Real-world Case Studies (fake media, misinformation) Deepfake Technology & Detection, AI-based Multimedia Security (ML/DL approaches). Activities: Lab based practices for above concepts.	CLO-2 CLO-3

Course Title: Malware Analysis & Reverse Engineering

Total Hours: 60

Course Objectives:

The objective of this course is to provide an insight to fundamentals of malware analysis which includes analysis of JIT compilers for malware detection in legitimate code. DNS filtering and reverse engineering is included.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Understand the concept of malware and reverse engineering.

CLO2: Implement tools and techniques of malware analysis.

CLO3: Applying debugging concept with tools

CLO4: Learning Memory Forensic and Volatility

Units/Hours	Contents	Mapping with Course Learning Outcome
	Fundamentals of Malware Analysis (MA), Reverse Engineering Malware (REM) Methodology, Brief Overview of Malware analysis lab setup and configuration, Introduction to key MA tools and techniques, Behavioral Analysis vs. Code Analysis, Resources for Reverse-Engineering Malware (REM) Understanding Malware Threats, Malware indicators, Malware Classification, Examining Clam AV Signatures, Creating Custom Clam AV Databases, Using YARA to Detect	

I 15 Hours	Malware Capabilities, Creating a Controlled and Isolated Laboratory, Introduction to MA Sandboxes, Ubuntu, Zeltser's REMnux, SANS SIFT, Sandbox Setup and Configuration New Course Form, Routing TCP/IP Connections, Capturing and Analyzing Network Traffic, Internet simulation using INetSim, Using Deep Freeze to Preserve Physical Systems, Using FOG for Cloning and Imaging Disks, Using MySQL Database to Automate FOG Tasks.	CLO-1
	Activities : Use of Sandbox to understand the Malware	
II 14 Hours	Introduction to Python, Introduction to x86 Intel assembly language, Scanners: Virus Total, Jotti, and NoVirus Thanks, Analyzers: Threat Expert, CWSandbox, Anubis, Joebox, Dynamic Analysis Tools: Process Monitor, Regshot, HandleDiff, Analysis Automation Tools: Virtual Box, VM Ware, Python , Other Analysis Tools. Malware Forensics Using TSK for Network and Host Discoveries, Using Microsoft Offline API to Registry Discoveries , Identifying Packers using PEiD, Registry Forensics with Reg Ripper Plugins:, Bypassing Poison Ivy's Locked Files, Bypassing Conficker's File System ACL Restrictions, Detecting Rogue PKI Certificates.	CLO-2
	Activities: Use of web-based tools to understand the concepts.	
III 14 Hours	Malware and Kernel Debugging Opening and Attaching to Processes, Configuration of JIT Debugger for Shellcode Analysis, Controlling Program Execution, Setting and Catching Breakpoints, Debugging with Python Scripts and Py Commands, DLL Export Enumeration, Execution, and Debugging, Debugging a VMware Workstation Guest (on Windows), Debugging a Parallels Guest (on Mac OS X). Introduction to WinDbg Commands and Controls, Detecting Rootkits with WinDbgScripts, Kernel Debugging with IDA Pro.	CLO-3
	Activities: Use of Python Libraries to understand the concepts.	
IV 17 Hours	Memory Forensics and Volatility Memory Dumping with MoonSols Windows Memory Toolkit, Accessing VM Memory Files Overview of Volatility, Investigating Processes in Memory Dumps, Code Injection and Extraction, Detecting and Capturing Suspicious Loaded DLLs, Finding Artifacts in Process Memory, Identifying Injected Code with Malfind and YARA. Using WHOIS to Research Domains, DNS Hostname Resolution, Querying, Passive DNS, Checking DNS Records, Reverse IP Search New Course Form, Creating Static Maps, Creating Interactive Maps.	CLO-4

	Activities: Case study of Finding Artifacts in Process Memory, Identifying Injected Code with Malfind and YARA.

Course Title: Secure Software Design and Enterprise Computing

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

To help students learn to fix software flaws and bugs in various software. To make students aware of various issues like weak random number generation, information leakage, poor usability, and weak or no encryption on data traffic.

Expose students to techniques for successfully implementing and supporting network services on an enterprise scale and heterogeneous systems environment.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Show Interrelationship between security and software development process.

CLO2: Differentiate between various software vulnerabilities.

CLO3: Explain software process vulnerabilities for an organization.

CLO4: Recognize resources consumption in a software.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 13 Hours	Secure Software Design Identify software vulnerabilities and perform software security analysis, Master security programming practices, Master fundamental software security design concepts, Perform security testing and quality assurance.	CLO-1 and CLO-2

	Activities : Case study based learning.	
II 15 Hours	Enterprise Application Development Describe the nature and scope of enterprise software applications, Design distributed N-tier software application, Research technologies available for the presentation, business and data tiers of an enterprise software application, Design and build a database using an enterprise database system, Develop components at the different tiers in an enterprise system, Design and develop a multi-tier solution to a problem using technologies used in enterprise system, Present software solution.	CLO-1
	Activities: Group Discussion based learning.	
III 16 Hours	Enterprise Systems Administration Design, implement and maintain a directory-based server infrastructure in a heterogeneous systems environment, Monitor server resource utilization for system reliability and availability, Install and administer network services (DNS/DHCP/Terminal Services/Clustering/Web/Email).	CLO-3
	Activities: Group discussion based learning.	
IV 16 Hours	Obtain the ability to manage and troubleshoot a network running multiple services, understand the requirements of an enterprise network and how to go about managing them. Handle insecure exceptions and command/SQL injection, Defend web and mobile applications against attackers, software containing minimum Vulnerabilities and flaws. Case study of DNS server, DHCP configuration and SQL injection attack.	CLO-4
	Activities: Case study of various server configuration.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Title: Big Data Analytics and Visualization

Total Hours: 60

Course Objectives:

The course will help students prepare the big data for analysis and extract the meaningful data from unstructured big data. Help student to develop data visualizations skill and to apply various tools for analysis of structured and unstructured big data.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Illustrate the identification of Big Data problem

CLO2: Learn the Behaviour and Visualisation of Data

CLO3: Differentiate structured data from unstructured data.

CLO4: Use Hadoop related tools such as JAQL, Spark, Pig and Hive for structured and unstructured Big Data analytics.

L	T	P	Cr
4	0	0	4

Units/Hours	Contents	Mapping with Course Learning Outcome

I 15 Hours	Big Data Introduction: What is big data, why big data, convergence of key trends, unstructured data, industry examples of big data and web analytics. Big Data Technologies: Big Data Architecture in PySpark, Spark ecosystem overview, Spark SQL, MLlib, Spark Streaming, RDD vs DataFrame vs Dataset, PySpark setup Data Gathering and Preparation: Data formats, parsing and transformation, Scalability and real-time issues.	CLO1
	Activities: Case study and Group Discussion.	
II 15 Hours	Data Cleaning: Consistency checking, Heterogeneous and missing data, Data Transformation and segmentation. Visualization: Descriptive and comparative statistics, Designing visualizations, Time series, Geo-located data, Correlations and connections, Hierarchies and networks, interactivity.	CLO2, CLO-3
	Activities: Implementation above theory with Python code.	
III 15 Hours	NoSQL: Introduction to NoSQL, aggregate data models, key-value and document data models. Vector Databases: Introduction to Vector databases, Embedding Fundamental, Working with FAISS, Vector Database Schema and Metadata, Vector Databases & Knowledge Systems : Introduction to embeddings, Vectored databases, Knowledge Base/Graphs, Use cases in LLMs.	CLO-3
	Activities: Implementation and designing with Spark/Mongo DB.	
IV 15 Hours	Text preprocessing: Loading and cleaning raw text files, Tokenization, stop words, stemming, lemmatization (NLTK, spaCy) Big Data Text Analytics: Understanding Text Analytics in Big Data, Predictive Analysis with Text, Document-Term Matrix with scikit-learn, Basic sentiment analysis, Topic modeling (LDA), TF-IDF scoring and vectorization.	CLO-4
	Activities: Implementation and usage of tools over the cloud.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Title: Internet of Things

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to introduce the students to the concepts of IoT, its networking and communication. The course focussed on use of IoT technology and its design constraints.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe IoT and its networking and communication aspects.

CLO2: Analyze the IoT Design Methodology

CLO3: Explain the concepts related to Industry 4.0 and security.

CLO4: Design IoT applications on different embedded platform.

Units/Hours	Contents	Mapping with Course Learning Outcome
Unit-1 16Hours	Introduction to IoT: Defining IoT, Characteristics of IoT, Physical design of IoT, Logical design of IoT, Functional blocks of IoT, Communication models and APIs IoT and M2M, Difference between IoT and M2M.	CLO1
	Activities: Assignments and Group Discussion.	
Unit-2 14Hours	IoT Platforms Design Methodology: Introduction, IoT Design Methodology, Case Study on IoT System for Weather Monitoring. Case Studies Illustrating IoT Design: Home Automation, Environment, Agriculture.	CLO2
	Activities: Analysis of various case studies	
Unit-3 14Hours	Introduction: Sensing & actuation, Industry 4.0: Cyber Physical Systems and Next Generation Sensors, Cybersecurity in Industry 4.0, Basics of Industrial IoT: Industrial Processes, Industrial Sensing & Actuation, Security in IIoT, Data Handling and Analytics.	CLO3
	Activities: Group Discussion and Flip Learning.	
Unit-4 16Hours	Developing IoTs: Developing applications through IoT tools including Python/ Arduino/ Raspberry pi, developing sensor-based application through embedded system platform.	CLO4
	Activities: Hands on experience with IoT kits.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Code: MCBS.618L

Course Title: Web development and penetration testing

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

This course focuses on providing students with a thorough grasp of web development principles and security practices. Through the course, students will acquire the ability to employ suitable tools and techniques for penetration testing web applications, effectively identify and address common web vulnerabilities, and evaluate the security status of web applications.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Develop a comprehensive understanding of web development concepts, techniques, and security measures.

CLO2: Apply appropriate tools and methodologies for penetration testing web applications.
CLO3: Demonstrate practical skills in identifying and mitigating common web vulnerabilities.
CLO4: Analyze and assess the security posture of web applications.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 14 Hours	Introduction to WebApplications, Architecture of web applications, Hyper Text Transfer Protocol Secure (HTTP), Hyper Text Transfer Protocol Secure (HTTPS). Front end Development using HTML: Creating Forms and Controls. Clientside scripting language - JavaScript: Variables and Objects, Decision Making Statement, Loops, Arrays, Functions, Applying Validations at Client Side. Activities: Brainstorming, assignment based learning	CLO1
II 16 Hours	Server Side Scripting: Introductionm to PHP, Language Fundamentals, Decision Making Statement, Loops, Statements, Operators, functions, Arrays, String Operations, Processing Forms via GET/POST, Web Application Development, Introduction to PHP Frameworks. Data Management: Introduction to MySQL & its Versions, Administration & Query Browser, Creating Databases & Tables, Using keys, Types of Table in MySQL, Data Types, Deleting databases and tables, Inserting, Retrieving, Updating & Deleting data, User Accounts, Access Control & documentation. PHP interfacing with MySQL Activities: Exercise based learning and practical hands on training	CLO1
III 15 Hours	Introduction to Penetration Testing standards, Pre Requirement of Pentration Testing, Penetration Testing Methodology, Setting up Vulnerable Web Application Lab, OWASP top 10 Web Vulnerabilites.Profiling the Web Server, Introduction to burpsuite,Authentication bypass using burpsuite, Bypassing Client Side Validations, Web Crawlers and Directory Bruteforce. Activities: Exercise based learning and practical hands on training	CLO2 CLO3
IV 15 Hours	Authentication and Session Management Flaws, Detecting various Injection based vulnerabilites. Cross Site Request Forgery(CSRF), Server Side REquest Forgery(SSRF), Cross Site Scripting (XSS), Introduction to BeeF and browser Hijack, Uploading web shell, Path traversal, Local File Inclusion (LFI) and Remote File Inclusion (RFI)	CLO3 CLO4

	Activities: Exercise based learning and practical hands on training

Course Code: MCBS.619L
Course Title: Digital Forensics
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The course provides an in-depth study of the rapidly changing and fascinating field of computer forensics. Introduces the students to the technical expertise and the knowledge required to investigate, detect and prevent digital crimes.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe relevant legislation and codes of ethics.

CLO2: Explain computer forensics, digital detective and various processes, policies and procedures.

CLO3: Apply E-discovery, guidelines and standards, E-evidence, tools and environment.

CLO4: Analyse Email and web forensics and network forensics.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 15 Hours	Digital Forensics Science: Forensics science, computer forensics, and digital forensics. Computer Crime: Criminalistics as it relates to the investigative process, analysis of cyber-criminalistics area, holistic approach to cyber-forensics. Legal Aspects of Digital Forensics: IT Act 2000, amendment of IT Act 2008.	CLO1
	Activities Analysis of Cyber Attacks and laws with case studies.	
II 15 Hours	Incident- Response Methodology, Cyber Crime Scene Analysis: Discuss the various court orders etc., methods to search and seizure electronic evidence, retrieved and un-retrieved communications, Discuss the importance of understanding what court documents would be required for a criminal investigation.	CLO2
	Activities: Preparation of various documents related to Cyber Crime Investigation.	
III 14 Hours	Image Capturing, Authenticating Evidence, Hidden Data Extraction, Data Storage, File Systems, Recovery of deleted files, Cracking Passwords, Internet Crime Investigations, Web Attack Investigations. Web application forensics and challenges, web application threats and attacks, web application logs analysis	CLO3 CLO4
	Activities: Demonstration of various tools to perform digital forensics.	
IV 16 Hours	Computer Forensics: Prepare a case, begin an investigation, understand computer forensics workstations and software, conduct an investigation, complete a case, Critique a case. Network Forensics: open-source security tools for network forensic analysis, requirements for preservation of network data. Wireless attack detection and investigation Mobile Forensics: mobile forensics techniques, mobile forensics tools.	CLO4
	Activities: Analysis of Case Studies, Performing various activities to perform network and mobile forensics.	

Transactional Modes:

- Lecture
- Case Studies
- Collaborative
- Self-Learning
- Online Teaching Tools

Course Code: MCBS.620L**Course Title: Secure Coding****Total Hours: 60**

L	T	P	Cr
4	0	0	4

Course Objectives:

The outcome of this course is to explain the most frequent programming errors leading to software vulnerabilities and identify security problems in software.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Define secure programs and list various risks in the software.

CLO2: Classify different errors that lead to vulnerabilities.

CLO3: Analyse various possible security attacks.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 16 Hours	Software Security: Security Concepts, Security Policy, Security Flaws, Vulnerabilities, Exploitation and Mitigations. Software Security problems, Classification of Vulnerabilities. Security Analysis: Problem Solving with static analysis: Type Checking, Style Checking, Program understanding, verifications and property checking, Bug finding and Security Review.	CLO-1
	Activities: Group Discussion based learning.	
II 14 Hours	Strings: Common String manipulating Errors, String Vulnerabilities and Exploits, Mitigation Strategies for strings, String handling functions, Runtime protecting strategies, Notable Vulnerabilities. Integer Secity: Integer data Type, Integer Conversions, Integer Operations, Integer Vulnerabilities, Mitigation Strategies.	CLO-2
	Activities: Implementation of above concepts in various programming Languages.	
III 14 Hours	Handling Inputs: What to validate, How to validate, Preventing metadata Vulnerabilities. Buffer Overflow: Introduction, Exploiting buffer overflow vulnerabilities, Buffer allocation strategies, Tracking buffer sizes, buffer overflow in strings, Buffer overflow in Integers Runtime protections.	CLO-3
	Activities: Implementation of above concepts in various programming Languages.	
IV 16 Hours	Web Applications: Input and Output Validation for the Web: Expect That the Browser Has Been Subverted, HTTP Considerations: Use POST, Not GET, Request Ordering, Error Handling, Request Provenance Maintaining Session State: Use Strong Session Identifiers, Enforce a Session Idle Timeout and a Maximum Session Lifetime, Begin a New Session upon Authentication.	CLO-3

	Activities: Implementation of above concepts in various programming Languages.

Course Title: Hardware Security

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

This course will focus on the importance of addressing different security threats on modern hardware design, manufacturing, installation, and operating practices. In particular, the threats would be shown to be relevant at scales ranging from a single user to an entire nation's public infrastructure. Through theoretical analyses and relevant practical world case studies, the threats would demonstrate, and then state-of-the-art defense techniques would be described.

The course would borrow concepts from diverse fields of study such as cryptography, hardware design, circuit testing, algorithms, and machine learning.

Course Learning Outcomes:

After completion of course, students would be able:

CLO1: Understand and optimize the process of implementing cryptographic algorithms on hardware

CLO2: Learn the different kinds of attacks that can be mounted against cryptographic algorithms

CLO3: Learn the process of building Physical Unclonable Functions and make them resilient to attacks

CLO4: Understand the different kinds of Trojans, their impact and learn the effective countermeasures for defending against the and Learn the different kinds of threats at the microarchitectural level and their corresponding countermeasures.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 15 Hours	Hardware Security Primitives: Algebra of Finite Fields, Mathematics of Cryptography, Fundamentals of Digital Systems, Application-Specific Integrated Circuits (ASIC), Field Programmable Gate Arrays (FPGA). Cryptography Implementation: Symmetric Cryptography- DES, AES; Asymmetric Cryptography-RSA, ECC; Cryptographic Hardware and their Implementation, Optimization of Cryptographic Hardware on FPGA, Physically Unclonable Functions (PUFs), PUF Implementations, PUF Quality Evaluation, Design Techniques to Increase PUF Response Quality	CLO1
	Activities: Assignment based learning	
II 15 Hours	Side-channel Attacks on Cryptographic Hardware: Overview; Fault attacks and countermeasures; Power attacks and countermeasures, Current-measurement based Side-channel Attacks (Attack on DES), Design Techniques to Prevent Side-channel Attacks, Improved Side-channel Attack Algorithms (Template Attack, etc.), Cache Attacks. Testability and Verification of Cryptographic Hardware: Fault-tolerance of Cryptographic Hardware, Fault Attacks, Verification of Finite-field Arithmetic Circuits	CLO2
	Activities: Exercise based learning and practical hands on training	

III 14 Hours	Modern IC Design and Manufacturing Practices and Their Implications: Hardware Intellectual Property (IP) Piracy and IC Piracy, Design Techniques to Prevent IP and IC Piracy, Using PUFs to prevent Hardware Piracy, Model Building Attacks on PUFs (Case Study: SVM Modeling of Arbiter PUFs, Genetic Programming based Modeling of Ring Oscillator PUF)	CLO3
	Activities: Case Studies	
IV 16 Hours	Hardware Trojans: Hardware Trojan Nomenclature and Operating Modes, Countermeasures Such as Design and Manufacturing Techniques to Prevent/Detect Hardware Trojans, Logic Testing and Side-channel Analysis based Techniques for Trojan Detection, Techniques to Increase Testing Sensitivity Infrastructure Security: Impact of Hardware Security Compromise on Public Infrastructure, Defense Techniques	CLO3
	Activities: Group discussion

Course Code: MCST.622L

Course Title: Blockchain Technology

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to introduce students to the concept of Blockchain, crypto primitives, Bitcoin basics, distributed consensus, consensus in Bitcoin, permissioned Blockchain, hyper ledger fabric and various applications where Blockchain is used.

Course Learning Outcomes::

After completion of course, students would be able to:

CLO1: Describe the basic concept of Blockchain, Crypto Primitives, Bitcoin Basics

CLO2: Identify the area in which they can apply permission or permission less Blockchain.

CLO3: Apply Block chaining concept in various applications.

Units/H ours	Contents	Mapping with Course Learning Outcome
I 14 Hours	Introduction to Blockchain: What is Blockchain, Public Ledgers, Blockchain as Public Ledgers, Bitcoin, Blockchain 2.0, Smart Contracts, Block in a Blockchain, Transactions, Distributed Consensus, The Chain and the Longest Chain, Cryptocurrency to Blockchain 2.0, Permissioned Model of Blockchain	CLO-1
	Activities: Case studies based Learning, Group Discussion.	
II 14 Hours	Basic Crypto Primitives: Cryptographic Hash Function, Properties of a hash function, Hash pointer and Merkle tree, Digital Signature, Public Key Cryptography, A basic cryptocurrency. Bitcoin Basics: Creation of coins, Payments and double spending, FORTH – the precursor for Bitcoin scripting, Bitcoin Scripts, Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay.	CLO-1
	Activities: Live Demonstration, Implementation Based Learning of hash functions, Group Discussions.	
III 15 Hours	Distributed Consensus: Why Consensus, Distributed consensus in open environments, Consensus in a Bitcoin network. Consensus in Bitcoin: Bitcoin Consensus, Proof of Work (PoW) – basic introduction, Hashcash PoW, Bitcoin PoW, Attacks on PoW and the monopoly problem, Proof of Stake, Proof of Burn and Proof of Elapsed Time. The life of a Bitcoin Miner, Mining Difficulty, Mining Pool. Permissioned Blockchain: Permissioned model and use cases, Design issues for Permissioned blockchains, Execute contracts, State machine replication, Consensus models for permissioned blockchain, Distributed consensus in closed environment, Paxos, RAFT Consensus, Byzantine general problem	CLO-2
	Activities: Group Discussion, Assignment Based Learning, Case studies	

IV 17 Hours	Blockchain Components and Concepts: Actors in a Blockchain, Components in Blockchain design, Ledger in Blockchain. Hyperledger Fabric architecture and design: Ordering Services, Channels in Fabric, Fabric Peer and Client application and fabric certificate authority. Hyperledger Fabric: Architecture and Transaction Flow. Hyperledger Membership and Identity Management: Organization and Consortium Network, Membership Service Provide, Transaction Signing.	CLO-3
	Activities: Assignment Based Learning, Live Demonstration.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Code: MCBS.622L

Course Title: Quantum Computing & Cryptography

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

To provide fundamental concepts of quantum information processing and cryptography, and take the discussion forward to potentials offered, technological bottlenecks and the way forward. To expose the participants to the state-of-the-art in quantum computing and cryptography with its possible impact on the society.

Course Learning Outcomes

CLO1: Participants will understand the basic concepts and terminologies in quantum information processing and quantum cryptography.

CLO2: To work in the field of quantum information processing and quantum cryptography, and to design efficient quantum algorithms to solve different computing problems.

CLO3: To understand the basic concepts Non-local Correlation and Entanglement.

CLO4: To design new or modify existing quantum cryptographic algorithms for secure key distribution and communications.

CLO5: To grasp the working principle of a quantum computer and understand the impact of noise in real world implementations.

CLO6: To understand the current scenario in Google, IBM, D-wave, IonQ etc.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 16 Hours	Basics of Quantum Information and Linear Algebra: Why Quantum Computing, Classical to quantum mechanics, Hilber space, Bases vectors and linear independence, Operators and matrices, Hermitian and Unitary operators, Measurements in quantum mechanics.	CLO-1, CLO-6
	Activities : Exercise based learning, Demonstration of above theory using Mathematica/ MATLAB tools	
II 14 Hours	Introduction to quantum information: Qubits and quantum gates, Quantum circuits, Quantum parallelism, Bloch sphere, Bell states, Density operators, Pure and Mixed states, Information and entropy, Von-Neumann entropy.	CLO-1, CLO-2
	Activities: Activities: Assignment based learning, Demonstration of above theory using Mathematica/ MATLAB tools	
III 14 Hours	Quantum Distance Measures, Trace distance, Fidelity, No-cloning Theorem, Einstein-Podolsky-Rosen paradox, Entanglement and Nonlocality: Quantum entanglement, bi-partite and multiqubit systems, Bell-type inequalities and nonlocality, entanglement classes and measures.	CLO-3
	Activities: Assignment based learning, Demonstration of Entanglement and Non-locality through animated videos.	
IV	Applications and Quantum Cryptography: Teleportation, Dense coding, Entanglement swapping, Quantum key distribution, Quantum cryptographic protocols (BB84, E91, BBM92), Quantum Random Number Generator, Introduction to Quantum Internets.	

16 Hours	Quantum Noise and Operation: Environments and quantum operations, examples of noisy channels, effect of noise on efficiency of communication protocols.	CL0-4, CLO-5
	Activities: Demonstration of above theory using Mathematica/MATLAB tools, Case based study of realization of quantum computing.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Code: MCBS.623L

Course Title: Network Security

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives: The course is structured to uncover and understand the current trends in computer networks through literature readings and to encourage a performance-oriented approach to analysing computer and communications networks. It also provides hands-on experience in securing networks.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe the basics of networking and VLANs.

CLO2: Explain IP addressing, routing and subnetting.

CLO3: Demonstrate the configuration of Cisco Routers, IPv4 Addresses and Routes, DHCP, and Connectivity with ping, traceroute and telnet.

CLO4: Design the network with Access Control Lists, Network Address Translation and Firewalls.

Units/Hour s	Contents	Mapping with Course Learning Outcome
Unit I 14Hours	Networking Fundamentals: Perspectives on Networking, TCP/IP Networking Model, OSI Networking Model. Ethernet LANs and Switches: Building Ethernet LANs with Switches, Installing and operating Cisco LAN Switches, Configuring Ethernet Switching. Virtual LAN: introduction to VLAN, VLAN Links, VLAN Tagging, VLAN Trunk Protocol (VTP).	CLO1
	Activities: Brainstorming, assignment-based learning	
II 16Hours	Fundamentals of IPv4 Addressing and Routing: Overview of Network layer Functions, IPv4 Addressing: Rules for IP Addresses, Class A, B, and C IP networks. IPv4 Routing, IPv4 Routing Protocols. IPv4 Addressing and Subnetting: Perspectives on IPv4 Subnetting.	CLO2
	Activities: Exercise based learning and practical hands-on training	
Unit III 16Hours	Implementing IPv4: Operating Cisco Routers, Configuring IPv4 Addresses and Routes: IP Routing, Configuring Connected Routes, Configuring Static Routes. Configuring and Verifying Host Connectivity: Configuring Routers to Support DHCP, Verifying Host IPv4 Settings, Testing Connectivity with ping, traceroute and telnet.	CLO3
	Activities: Exercise based learning and practical hands-on training	
Unit IV 14Hours	Firewalls: Firewall Basics, Types of Firewalls: Packet Filter, State-full Filter, Application Filter, Proxy Firewalls, Network Address Translation: Basic concepts and NAT Configuration. Access Control Lists: Ingress and Egress Filtering, Types of Access Control Lists, ACL types: standard and extended, ACL commands. Wireless Network Security. implementation of Denial of service (DoS) attacks, Distributed DoS (DDoS) attack and various types of DoS attacks.	CLO4
	Activities: Exercise based learning and practical hands on training	

Transactional Modes:

- Lecture
- Case Studies
- Collaborative
- Self-Learning
- Online Teaching Tools

Course Code: MCBS. 624P

Course Title: Multimedia Security-Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objectives of the Multimedia Security-Lab course are to introduce students to the basic concepts and techniques of Image, Audio and Video Security. To develop skills using recent Computer Vision software for solving practical problems.

Course Learning Outcomes:

At the end of the course the student will be able to:

CLO1: Implement and analyse the Steganography techniques.

CLO2: Analyse and design of data hiding algorithms, like data embedding into multimedia objects.

CLO3: Implement different Water-Marking techniques and analyse Watermark security & authentication

CLO4: Analyse and Design of more robust Steganography and Water-Marking techniques against Malicious Attacks.

CLO5: Apply data hiding techniques in digital right management.

Students will implement the lab practical as per the syllabus of the subject.

Lab Assignment

List of Practical will be based on Elective subject opted by the students

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual

Course Code: MCBS. 625P

Course Title: Network Security Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The Network Security Lab aims to provide students with hands-on exercises that reinforce their understanding and knowledge of various network security aspects.

Course Learning Outcomes:

CLO1: Demonstrate the configuration of VLANs, IP addressing, routing and subnetting.
CLO2: Implement IPv4 Addresses, Routes, DHCP and connectivity with ping, traceroute and telnet.
CLO3: Design Access Control Lists and Network Address Translation

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual

Course Code: MCBS.626P

Course Title: Malware Analysis & Reverse Engineering Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The primary objective of this lab course is to provide a practical introduction to various techniques used for malware analysis and reverse engineering.

Course Learning Outcomes:

After completion of course, students would be able:

CLO1: to setup platform for malware analysis

CLO2: to use various tools available for malware analysis

CLO3: to analyse malware using reverse engineering.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The evaluation of lab criteria will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual
2. Ligh, M. H., Case, A., Levy, J., & Walters, A. (2014). The Art of Memory Forensics: Detecting Malware and Threats in Wi

Course Code: MCBS.627P

**Course Title: Secure Software Design &
Enterprise Computing Lab**

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

To fix software flaws and bugs in various software. Students will aware of various issues like weak random number generation, information leakage, poor usability, and weak or no encryption on data traffic. Learn Methodologies and tools for developing secure software with minimum vulnerabilities and flaws.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Learn the use of various tools for software vulnerability.

CLO2: Apply different techniques for identification of software flaws.

CLO3: Track the resolution of flaws in software.

CLO4: Interrelate security and software development process.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual

Course Code: MCBS.628P

Course Title: Big Data Analytics and Visualization Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The lab will help students prepare the big data with pre-processing analysis and to extract the meaningful data from unstructured data. Help student to develop data visualizations skill and to apply various tools for analysis of structured and unstructured big data.

Learning outcome:

After completion of lab course, students would be able to:

CLO1: Pre-process the un-structured data by various cleaning activities.

CLO2: Convert the un-structured data to structured format.

CLO3: Use Python libraries for analysis and visualisation of data such as PySpark, PyMongo, pandas, numpy and BeautifulSoup.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual

Course Code: MCST.628P

Course Title: Internet of Things-Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The outcome of IOT Lab is to introduce the students to the different IOT technologies. To develop skills that will help the students to develop different IOT applications. To help use different IOT protocols and analysis the data in IOT.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Identify the different technology and develop IoT based applications.

CLO2: Implement IoT applications on different embedded platform.

CLO3: Evaluate the data received through sensors in IOT.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual

Course Code: MCBS.629P

Course Title: Web Development and Penetration Testing-Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objective of the lab course is to provide students with hands-on experience in web development and security practices. Students will be trained to explore web server profiling, intercept and manipulate, identify and exploit vulnerabilities, and demonstrate mitigation techniques for common web attacks.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Apply knowledge of web development concepts and techniques to create secure and functional web applications.

CLO2: Analyze and evaluate web application vulnerabilities and apply appropriate penetration testing methodologies to identify and mitigate them.

CLO3: Demonstrate effective problem-solving and critical thinking skills in identifying and addressing security flaws in web applications through hands-on practical exercises.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual

Course Code: MCBS.630P

Course Title: Digital Forensics Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objective of this course is to provide practical exposure of tools used to perform various activities related to different types of digital forensics such as memory forensics, network forensics and web forensics.

Course Learning Outcomes:

After completion of this lab course, students would be able to:

CLO1: Prepare case documents.

CLO2: Setup platform for digital investigation.
CLO3: Acquire and analyse various types of electronic evidences.
CLO4: Analyse Email and web communication headers.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The evaluation of lab criteria will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual
2. Marcella, A. J.(2007), Cyber forensics: A field manual for collecting, examining and preserving evidence of computer crimes. New York: Auerbach publication

Course Code: MCBS.631P
Course Title: Secure Coding Lab
Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The outcome of this course is to explain the most frequent programming errors leading to software vulnerabilities and identify security problems in software.

Course Learning outcome:

After completion of this lab course, students would be able to:

- CLO1:** Implement secure programs and list various risks in the software.
CLO2: Classify different errors that lead to vulnerabilities.

CLO3: Analyse various possible security attacks in the programs.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual
2. Seacord, R. C. (2013). Secure Coding in C and C++. United States: Addison Wisley Professional.
3. Chess, B., and West J. (2007). Secure Programming with static Analysis. United States: Addison Wisley.

Course Code: MCBS.632P

Course Title: Hardware Security Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

This lab is designed to provide practical exposure to hardware security principles, including vulnerability analysis, cryptographic hardware implementation, and side-channel attack mitigation techniques.

Course Learning Outcomes:

After completion of this lab course, students would be able to:

CLO1: Analyze and detect hardware vulnerabilities through simulation and testing techniques.

CLO2: Implement and evaluate secure hardware designs using cryptographic modules and countermeasures against physical attacks.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual
2. Tehranipoor, M., & Wang, C. (2011). *Introduction to Hardware Security and Trust*. Springer.
3. Bhunia, S., & Tehranipoor, M. (2018). *Hardware Security: A Hands-on Learning Approach*. Morgan Kaufmann.

Course Code: MCST.633P

Course Title: Blockchain Technology Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The outcome of this course is to introduce students to the concept of Blockchain, crypto primitives, Bitcoin basics, distributed consensus, consensus in Bitcoin, permissioned Blockchain, hyper ledger fabric and various applications where Blockchain is used.

Course Learning Outcomes:

After completion of this lab course, students would be able to:

CLO1: Design the basic concept of Blockchain, Crypto Primitives, Bitcoin Basics

CLO2: Identify the area in which they can apply permission or permission less Blockchain.

CLO3: Apply Block chaining concept in various applications.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual
2. Gaur, N., Desrosiers, L., Ramakrishna, V., Novotny, P., Baset, S., & O'Dowd A. (2018). Hands-On Blockchain with Hyperledger: Building decentralized applications with Hyperledger Fabric and Composer. United Kingdom: Packt Publishing Ltd. Packt.
3. Badr, B., Horrocks, R., and Xun(Brian), Wu. (2018). Blockchain By Example: A developer's guide to creating decentralized applications using Bitcoin, Ethereum, and Hyperledger. United Kingdom: Packt Publishing Ltd.

Course Code: MCBS.633P

Course Title: Quantum Computing & Cryptography Lab

Total Hours: 30

Course Objectives:

To provide one-to-one correspondence between theory and hands-on in terms of in-depth knowledge of fundamentals of Quantum Information Processing. To develop skills with hands-on experience of simulation of quantum computation in order to work in the field of Quantum Information Processing and Cryptography. To acquire deeper understanding to design, develop, and analyse efficient algorithms in the field of Quantum Computing.

Course Learning Outcomes:

At the end of the course the student will be able to:

CLO1: Write a script to simulate qubits, multi-qubit pure and mixed quantum states, the celebrated Bell states and density matrices associated with entangled systems.

CLO2: Write a script to simulate quantum circuits composed of single and multi-qubit quantum gates.

CLO3: Write a script to simulate different measures of entanglement and no locality in pure and mixed two and three-qubit states.

CLO4: Write a script to simulate different noisy channels to analyse the effect of noise on entanglement and efficiency of a protocol.

CLO5: Simulate different quantum information processing protocols such as teleportation, dense coding, and Secret Sharing.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings

1. Lab Manual

Course Code: MCST.625P

Course Title: Machine Learning Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives:

The objectives of the Machine Learning Lab course are to introduce students to the basic concepts and techniques of Machine Learning. To develop skills of using recent machine learning software for solving practical problems.

Course Learning Outcomes::

After completion of course, students would be able to:

CLO1: Review some common Machine Learning algorithms and their limitations.

CLO2: Apply common Machine Learning algorithms in practice and implementing the same.

CLO3: Perform experiments in Machine Learning using real-world data.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

Interdisciplinary Course (IDC) Semester-II

Course Code: MCBS.506L

Course Title: IT Fundamentals

Total Hours: 30

L	T	P	Cr
2	0	0	2

Course Objectives:

The course aims to provide a comprehensive understanding of the foundational concepts in Information Technology. It introduces students to essential topics such as computer hardware, software, networking, data storage, operating systems, and the internet. The course also emphasizes practical applications, enabling students to effectively use IT tools for academic and professional tasks. By the end of the course, students will develop the confidence to analyze, interpret, and engage with various IT systems and appreciate the role of IT in solving real-world problems.

Course Learning Outcomes:

At the end of this course, students will be able to:

CLO1: Describe different hardware and software components of computer.

CLO2: Use word processing, presentation and spreadsheet software.

CLO3: Illustrate the concept of networking and internet.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 8 Hours	Fundamentals of Computers: Parts of computers, Hardware, BIOS, Operating systems, Binary system, Logic gates and Boolean Algebra. Introduction to computer network and World Wide Web, Storage space, CPU and Memory.	CLO1
	Activities: Numerical Based exercises for conversion of Binary to octal, hexadecimal and decimal number system, Identification of various ports by the students on such as Audio ports, USB ports, HDMI Port, Ethernet port	
II 7 Hours	MS-Word: Introduction to Word Processing, Creating and Saving Documents, Text Formatting, Tables, Document Review Option, Mail Merge, Inserting Table of Contents, Reference Management.	CLO2
	Activities: Error free typing exercises, Insertion of in text citations and insertion of Bibliography at the end of the document, Insertion of Tables and figures and cross referencing them from the text.	
III 8 Hours	Applications Software: Introduction to MS Paint, Notepad, Spreadsheet applications, Presentation applications, Internet browsers and Image processing applications.	CLO2
	Activities: Creation of a Powerpoint presentation by students with various animation and and transition effects, Creation of an excel workbook by the students and application of basic mathematical functions (such as sum, average, Count, Mean, Median, Mode) on the data	
IV 7 Hours	World Wide Web: Origin and concepts, Latency and bandwidth, searching the internet, Advanced web-search using Boolean logic, Networking fundamentals.	CLO3
	Activities: searching for some relevant articles using keyword combinations on various electronic databases using advanced search options by students.

Course Code: MCBS.507L**Course Title: Programming in C****Total Hours: 30**

L	T	P	Cr
2	0	0	2

Course Objectives:

This course is designed to develop a strong foundation in programming using the C language, which is critical for understanding system-level and application-level software development. The objective is to enable students to write structured, efficient, and error-free programs by understanding fundamental programming constructs such as variables, control structures, functions, arrays, pointers, and file handling. Students will also gain insight into memory management and algorithmic thinking, preparing them to handle more complex programming tasks and transition smoothly into other advanced languages and systems programming.

Course Learning Outcomes:

At the end of this course, students will be able to:

CLO1: Describe the concept and need of programming.

CLO2: Explain syntax and use of different functions available in C.

CLO3: Demonstrate programming in C.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 8 Hours	Introduction to Programming Language: Types of Programming Language, Structured Programming, Algorithms and Flowcharts, Programming Language. Introduction to C: History, Character Set, Structure of a C Program – constants, variables and Keywords, data types, expression statements, compound statements.	CLO1 CLO2
	Activities: Program Fragments based exercises to find out output of various program fragments using the studied concepts	
II 8 Hours	C Operators: Arithmetic, Unary, Relational and Logical, Assignment, Conditional Operator, Increment, decrement Operator, Using library function in math. Data Input Output: Single character input, getchar, getch,getc, single character output putchar, putc, Formatted I/O.	CLO2, CLO3
	Activities: Program Fragments based exercises.	
III 7 Hours	C Constructs: If statement, while statement, do....while statement, for statement, switch statement, nested control statement, break, continue, goto statement. C Functions: Functions, Definition and scope, Assessing and Prototyping, Types of functions, passing arguments to functions.	CLO2, CLO3
	Activities: Program fragments-based exercises, Creating User defined function to perform simple activities and using them in C program.	
IV 7 Hours	Arrays and Strings: Single dimensional array, Multi-dimensional array, initializing array using static declaration, character array and strings, String Handling functions.	CLO2, CLO3
	Activities: Program fragment-based exercises, Pseudocode to implement single and multi-dimensional arrays concept for practical programs.

Course Title: Introduction to Digital Logic

Total Hours: 30

L	T	P	Cr
2	0	0	2

Course Objectives:

The course introduces the principles of digital logic design and its application in the development of digital systems. It covers topics such as number systems, logic gates, Boolean algebra, combinational and sequential circuits, and memory elements. The objective is to help students understand how digital circuits work at the logic level and how they form the basis of computer architecture. By the end of the course, students will be equipped with the skills to design and analyze digital systems, laying the groundwork for further study in embedded systems, computer architecture, and hardware design.

Course Learning Outcomes:

At the end of this course, students will be able to:

CLO1: Describe the digital signal along with the operations applicable on them.

CLO2: Discuss different number systems and conversion between them along with memory devices used to store such data.

CLO3: Apply the Boolean laws in different situation.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 8 Hours	Introduction: Digital Signals, basic digital circuits: AND operation, OR operation and NOT operation. Number Systems: Introduction, Binary number system, Octal number system, Hexadecimal Number system, Conversion of one number system to other, Gray code.	CLO-1
	Activities: Web based Simulation learning.	
II 8 Hours	Logic Gates and Boolean Algebra: Boolean Laws, Boolean expression and functions, Logic Gates.	CLO-2
	Activities: Web based Simulation learning.	
III 7 Hours	Combinational Circuit Design: Karnaugh Map representation of logic functions, SOP, POS, Simplification of logic functions using K-Map.	CLO-2
	Activities: Exercise based learning.	
IV 7 Hours	Flip-Flops: 1-bit memory cell, S-R Flip Flop, J-K Flip Flop, D-Flip Flop, T- Flip Flop.	CLO-2
	Activities: Web based simulation.

Course Title: Multimedia and Its Applications

Total Hours: 30

L	T	P	Cr
2	0	0	2

Course Objectives:

This course provides an overview of multimedia technologies and their applications in various domains such as education, entertainment, communication, and digital content creation. The objective is to familiarize students with multimedia components including text, graphics, audio, video, and animation, as well as multimedia systems, formats, and tools. Students will explore how multimedia is stored, processed, compressed, and transmitted across platforms. The course also emphasizes hands-on experience with multimedia software to encourage creative expression and practical problem-solving.

Course Learning Outcomes:

At the end of this course, students will be able to:

CLO1: Identify and analyze different types of multimedia along with their representation.

CLO2: Differentiate between formats of all types of multimedia.

CLO3: Plan where we can use this multimedia.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 8 Hours	Introductory Concepts: Multimedia-Definitions, Basic properties and medium types. Multimedia applications, Uses of Multimedia. Sound/ Audio: Basic Sound Concepts, Music. Speech: Generation, Analysis and Transmission.	CLO 1
	Activities: Group Discussion.	
II 7 Hours	Images and Graphics: Basic concepts: Image representation, image format, Graphics Format, Computer Image Processing. Video and Animation: Basic Concepts: Video Signal Representation, Computer Video Format. Television: Conventional Systems, Enhanced Definition Systems, High-Definition Systems.	CLO 2
	Activities: Web based learning.	
III 7 Hours	Data Compression: Storage space, coding requirements, JPEG, MPEG. Miscellaneous: Optical Storage Media, Multimedia Operating Systems, Multimedia Communication Systems.	CLO 3
	Activities: Simulation based Learning.	
IV 8 Hours	Documents and Hypertext: Document Architecture, Manipulation of Multimedia Data, Hypertext, Hypermedia and Multimedia and example. Multimedia Applications: Media Preparation, composition, Integration, communication, Consumption, and Entertainment.	CLO 3
	Activities: Group Discussion.

Course Title: Introduction to MATLAB

Total Hours: 30

L	T	P	Cr
2	0	0	2

Course Objectives:

The course aims to introduce MATLAB as a powerful computational and visualization tool for engineering and scientific applications. Students will learn the basics of MATLAB programming, including matrix operations, control structures, data visualization, and function creation. The objective is to enable students to solve mathematical problems, analyze data, and simulate systems using MATLAB's built-in functions and toolboxes. This foundation will support further exploration of signal processing, machine learning, and numerical computation in advanced courses and research work.

Course Learning Outcomes:

At the end of this course, students will be able to:

CLO1: Describe the basic syntax of MATLAB along with various functions available in it.

CLO2: Analyze all the functions in graphical manner.

CLO3: Design a GUI interface for any software.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 8 Hours	Introduction: MatLab, MatLab Syntax and interactive computations. Live Demonstration of MATLAB command prompt.	CLO 1
	Activities: Assignment based learning.	
II 7 Hours	Programming: in Matlab using procedures and functions: Arguments and return values, M-files, Formatted console input-output, String handling. Live Demonstration of MATLAB M-files	CLO 1, CLO 2
	Activities: Assignment based learning	
III 8 Hours	Control Statements: Conditional statements: If, Else, Elseif. Repetition statements: While, For. Manipulating Text: Writing to a text file, Reading from a text.	CLO 2
	Activities: Creation of text files and assignment-based learning.	
IV 7 Hours	Graph Plots: Basic plotting, Built in functions GUI Interface: Attaching buttons to actions, Getting Input, Setting Output Using the toolboxes.	CLO 3

Course Title: Basics of Python Programming

Total Hours: 32

L	T	P	Cr
2	0	0	2

Course Objectives:

The objective of this course is to introduce students to the foundational concepts of programming using Python. It aims to develop an understanding of programming logic, control structures, and core Python constructs such as variables, operators, lists, dictionaries, and functions. The course also focuses on practical skills such as file handling, working with

structured data formats (CSV, Excel, PDF, Word), and data visualization using libraries like pandas and matplotlib. Through hands-on lab sessions, students will gain the ability to write, debug, and implement Python programs for real-world problem-solving and data analysis tasks.

Course Learning Outcomes

After the completion of course, participants will be able to:

CLO1: Explain basics of programming.

CLO2: Define various constructs of python programming.

CLO3: Develop python code to handle data stored in files.

CLO4: Develop python code to represent the data in graphical mode.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 8 Hours	Introduction to algorithm, flowchart and programming, Python Introduction, Installing and setting Python environment, variables and its types, Operators. Flow control: if, if-else, for, while, range () function, continue statement, pass statement.	CLO-1
	Activities: Lab based practices for above concepts.	
II 8 Hours	Lists: Basic Operations, Iteration, Indexing, Slicing. Dictionaries: Basic dictionary operations, Basic String operations.	CLO-2, CLO-4
	Activities: Lab based practices for above concepts.	
III 8 Hours	Functions: Definition, Call, Arguments. Pattern Matching with Regular Expressions, Introduction to panda's library, plotting data using matplotlib.	CLO-3
	Activities: Lab based practices for above concepts.	CLO-4
IV 8 Hours	File handling: Reading and Writing Files, working with Excel Spreadsheets, working with PDF and Word Documents, working with CSV Files.	
	Activities: Lab based practices for above concepts.

SEMESTER –III

Course Code: MCBS.535L
Course Title: Biometric Security
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives: The outcome of this course is to introduce students to the concept of biometric security, explore different biometric modalities and their characteristics. Design, implementation, and evaluate of biometric systems. Analyze the vulnerabilities and threats associated with biometric security, learn about the techniques for enhancing the security of biometric systems and know the ethical and legal issues related to biometric security.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe the various modules constituting a bio-metric system. Compare and contrast the different bio-metric traits and appreciate their relative significance.

CLO2: Classify the different feature sets used to represent some of the popular bio-metric traits.

CLO3: Evaluate and design security systems incorporating bio-metrics.

CLO4: Discuss methods to enhance security of biometrics, ethical and legal issues related to biometric security

Units/Hours	Contents	Mapping with Course Learning Outcome
I 15 Hours	Introduction and Definitions of bio-metrics, Traditional authenticated methods and technologies. Introduction to Image Processing, Image Enhancement Techniques: Spatial Domain Methods: Smoothing, sharpening filters, Laplacian filters, Frequency domain filters, Smoothing and sharpening filters.	CLO1
	Activities : Assignments and Problem based Exercise	
II 15 Hours	Introduction to image segmentation and Image feature extraction. Bio-metric technologies: Fingerprint, Face, Iris, Hand Geometry, Gait recognition, Ear, Voice, Palm print, On-Line Signature Verification, 3D Face, Recognition, Dental Identification and DNA.	CLO2
	Activities: Hands on training using open source software tools.	
III 21 Hours	Biometric System Architecture: Sensor technologies and data acquisition, Feature extraction and representation, Matching algorithms and decision-making, Template storage and managemen, System integration and deployment.	CLO1
	Biometric System Evaluation: Performance metrics and evaluation protocols, Receiver Operating Characteristic (ROC)	

	analysis, Error types and error rates, Data collection and benchmarking	
	Activities: Group based project development.	
IV 15 Hours	Vulnerabilities and Attacks: Spoofing and presentation attacks, Biometric template security and storage, Biometric data leakage and identity theft, Impersonation attacks and countermeasures. Enhancing Biometric Security: Biometric cryptosystems: Cancelable biometrics, Liveness detection and anti-spoofing techniques, Template protection and secure storage, Continuous authentication and adaptive systems Ethical and Legal Issues: Privacy concerns and data protection, Biometric data management and retention policies, Biometric regulations and standards, Social implications and public perception	CLO3
	Activities: Case studies.	

Transactional Modes:

- Lecture
- Experimentation
- Case study
- Demonstration
- Discussion
- Problem solving
- Online Teaching Tools

Suggested Readings:

1. Jain, A.K., Flynn, P., and Ross, A.A. (2008) Handbook of Biometrics: Springer.

3. Zhang, D., Sun, F., and Toh, K.A. (2005) Multimodal Biometrics: Principles and Applications, Springer.
4. Jain, A.K., Jaccard, J., and Nandakumar, K. (2017) Biometric Security and Privacy: Opportunities & Challenges in the Big Data Era, Springer.
5. Gonzalez, R. C., and Woods, R. E. (2018). Digital Image Processing India: Person Education.
6. Research Articles from SCI & Scopus indexed Journals.

Course Code: MCBS.536L

Course Title: Data Warehousing and Data Mining

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to introduce data warehousing and mining techniques. Applications of data mining in web mining, pattern matching and cluster analysis are included to aware students of broad data mining areas.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Discuss different sequential pattern algorithms.

CLO2: Apply the techniques to extract patterns from time series data and their applications in real world.

CLO3: Examine Graph mining algorithms to Web mining.

CLO4: Design the computing framework for Big Data.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 14 Hours	Introduction to Data Warehousing: Data warehousing Architecture, OLAP Server, Data warehouse Implementation. Data Mining: Mining frequent patterns, association and correlations; Sequential Pattern Mining concepts, primitives, scalable methods;	CLO-1 CLO-4
	Activities: Introduction to Data Warehousing: Data warehousing Architecture, OLAP Server, Data warehouse Implementation. Data Mining: Mining frequent patterns, association and correlations; Sequential Pattern Mining concepts, primitives, scalable methods.	
II 15 Hours	Classification and prediction: Cluster Analysis – Types of Data in Cluster Analysis, Partitioning methods, Hierarchical Methods; Transactional Patterns and other temporal based frequent patterns.	CLO-1
	Activities: Assignment based learning, Exercise based learning.	
	Mining Time series Data, Periodicity Analysis for time related sequence data, Trend analysis, Similarity search in Time-series analysis;	

III 16 Hours	Mining Data Streams, Methodologies for stream data processing and stream data systems, Frequent pattern mining in stream data, Sequential Pattern Mining in Data Streams, Classification of dynamic data streams.	CLO-2
	Activities: Case based study and Group discussion for the prediction of solutions for real time problems.	
IV 15 Hours	Web Mining, Mining the web page layout structure, mining web link structure, mining multimedia data on the web, Automatic classification of web documents and web usage mining; Distributed Data Mining. Recent trends in Distributed Warehousing and Data Mining, Class Imbalance Problem; Graph Mining; Social Network Analysis.	CLO-3 CLO-4
	Activities: Student presentation, Class discussion on different types of mining for the solution of real world problem.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

6. Research Articles from SCI & Scopus indexed Journals.

Course Code: MCBS.537L

Course Title: Security Auditing and Risk Management

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to introduce students to the fundamental concepts of risk management in the context of information security and organizational operations. It aims to help students define and distinguish between various components of contingency planning, such as Incident Response Planning (IRP), Disaster Recovery Planning (DRP), and Business Continuity Planning (BCP). The course is designed to guide students in integrating these components into a comprehensive and coherent strategy that supports sustained organizational functionality. Additionally, students will learn to evaluate different incident response options and develop a practical Incident Response Plan tailored to real-world organizational needs.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: State contingency strategies including data backup and recovery and alternate site selection for business resumption planning

CLO2: Describe the escalation process from incident to disaster in case of security disaster.

CLO3: Design a Disaster Recovery Plan for sustained organizational operations.

CLO4: Design a Business Continuity Plan for sustained organizational operations.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 15 Hours	SECURITY BASICS: Information Security (INFOSEC) Overview: critical information characteristics – availability information states – processing security Countermeasures-education, training and awareness, critical information characteristics – confidentiality critical information characteristics – integrity, information states – storage, information states – transmission, security countermeasures-policy, procedures and practices, threats, vulnerabilities. Activities: Group discussion and Case study.	CLO1
II 15 Hours	Threats to and Vulnerabilities of Systems: definition of terms (e.g., threats, vulnerabilities, risk), major categories of threats (e.g., fraud, Hostile Intelligence Service (HOIS), malicious logic, hackers, environmental and technological hazards, disgruntled employees, careless employees, HUMINT, and monitoring), threat impact areas, Countermeasures: assessments (e.g., surveys, inspections), Concepts of Risk	CLO2

	Management: consequences (e.g., corrective action, risk assessment), cost/benefit analysis of controls, implementation of cost-effective controls, monitoring the efficiency and effectiveness of controls (e.g., unauthorized or inadvertent disclosure of information), threat and vulnerability assessment. Activities: Group Discussion and panel Discussion.	
III 14 Hours	Security Planning: directives and procedures for policy mechanism, Risk Management: acceptance of risk (accreditation), corrective actions information identification, risk analysis and/or vulnerability assessment components, risk analysis results evaluation, roles and responsibilities of all the players in the risk analysis process, Contingency Planning/Disaster, modernization and migration management, Recovery: agency response procedures and continuity of operations, contingency plan components, determination of backup requirements, development of plans for recovery actions after a disruptive event, development of procedures for off-site processing, emergency destruction procedures, guidelines for determining critical and essential workload, team member responsibilities in responding to an emergency situation. Activities: Group Discussion and panel Discussion.	CLO3 CLO4
IV 16 Hours	Policies and Procedures Physical Security Measures: alarms, building construction, cabling, communications centre, environmental controls (humidity and air conditioning), filtered power, physical access control systems (key cards, locks and alarms) Personnel Security Practices and Procedures: access authorization/verification (need-to-know), contractors, employee clearances, position sensitivity, security training and awareness, systems maintenance personnel, Administrative Security Procedural Controls: attribution, copyright protection and licensing, Auditing and Monitoring: conducting security reviews, effectiveness of security programs, investigation of security breaches, privacy review of accountability controls, review of audit trails and logs. Operations Security (OPSEC): OPSEC surveys/OPSEC planning INFOSEC: computer security – audit, cryptography-encryption (e.g., point-to-point, network, link), cryptography-key management (to include electronic key), Cryptography-strength (e.g., complexity, secrecy, characteristics of the key) Activities: Case study of threat and vulnerability assessment.	CLO4

Transactional Modes:

Course Code: MCBS.538L

Course Title: Mobile security & Service

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

This course presents the three main mobile platforms and their ecosystems, namely Android, iOS, and PhoneGap/Web OS. It explores emerging technologies and tools used to design and implement feature-rich mobile applications for smartphones and tablets

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Explain the fundamentals, frameworks, and development lifecycle of mobile application platforms including iOS, Android, and PhoneGap.

CLO2: Identify the target platform and users.

CLO3: Design and develop a mobile application prototype in one of the platforms (challenge project).

Units/Hours	Contents	Mapping with Course Learning Outcome
I 14 Hours	Introduction: Introduction to Mobile Computing, Introduction to Android Development Environment, Factors in Developing Mobile Applications, Mobile Software Engineering, Frameworks and Tools, Generic UI Development Android User.	CLO1
	Activities: Group Discussion, Case studies.	
II 14 Hours	Mobile Platform Development Fundamentals, Mobile Application Lifecycle, Architecture & Application Structure, SDKs & Development Environments, Mobile Components: Activities, Intents, Services, Broadcast Receivers, Content Providers, APIs & SDK Tools, Emulator Setup & Debugging, Mobile UI Design Principles, Security Models of Android, iOS, PhoneGap, Sandboxing, Permissions, App Signing, Mobile Threats, OWASP Mobile Top 10, Secure Coding Practices, Assignment-Based Learning, Live Demonstration, Comparative Analysis, Security Architecture Analysis,	CLO1, CLO2
	Communications via Network and the Web: State Machine,	CLO2

III 15 Hours	Correct Communications Model, Android Networking and Web, Telephony Deciding Scope of an App, Wireless Connectivity and Mobile Apps, Android Telephony Notifications and Alarms-Performance, Performance and Memory Management, Android Notifications and Alarms, Graphics, Performance and Multithreading, Graphics and UI Performance, Android Graphics. Activities: Implementation based Learning, Live Demonstrations of Android Notifications and Graphics	
IV 15 Hours	Putting It All Together: Packaging and Deploying, Performance Best Practices, Android Field Service App, Location Mobility and Location Based Services Android Multimedia: Mobile Agents and Peer-to-Peer Architecture, Android Multimedia Platforms and Additional Issues: Development Process, Architecture, Design, Technology Selection, Mobile App Development Hurdles, Testing, Security and Hacking, Active Transactions, More on Security, Hacking Android. Recent trends in Communication protocols for IOT nodes, mobile computing techniques in IOT, agents-based communications in IOT. Activities: Case studies on recent trends, Presentations by students, Assignment based Learning.	CLO3

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Suggested Readings:

1. Lee, W. (2012). Beginning Android TM 4 Application Development. United States: John Wiley & Sons.
2. B'far, Reza. (2013). Mobile computing principles: Designing and developing mobile applications with UML and XML. New Delhi: Cambridge university press.
3. Research Articles from SCI & Scopus indexed Journals.

Course Code: MCST.538L
Course Title: Deep Learning
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to introduce students to the fundamental concepts and principles of Neural Networks and Deep Learning. Students will gain an understanding of how to match deep networks to appropriate problems and explore the practical applications of Deep Learning across various domains. The course also aims to provide a comprehensive understanding of different Deep Learning architectures, and students will have the opportunity to implement these architectures to solve real-world problems.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Understand the role of Deep learning in Various Applications.

CLO2: To design and implement Various Deep Learning Architecture.

CLO3: Critically Analyse Different Deep Learning Models in various Projects.

CLO4: To know about applications of Deep Learning in NLP and Sequence Modelling

Units/Hours	Contents	Mapping with Course Learning Outcome
I 14 Hours	Feed Forward Neural Networks, Gradient Descent, Back Propagation Algorithm, Vanishing, Gradient problem, Mitigation Defining Deep Learning, Common Architecture of Deep Networks, Transformer: Introduction, Self attention, Multi-head attention, positional encoding, Layer Normalization.	CLO1, CLO2
	Activities: Discussion of role of Neural Networks and Compression of features using Autoencoders. Practical – Installation of TensorFlow and Keras.	
II 15 Hours	Unsupervised Pretrained Networks: Deep Belief Network, Generative Adversarial Network. Convolutional Neural Networks(CNN): General Architecture, Input Layers, Convolutional Layers, Pooling Layers, Fully Connected Layers. RAG:- Architecture and components, Information retrieval and search, RAG evaluation strategies, Tools and frameworks(Langchain, langGraph).	CLO2

	Recurrent Neural Networks: General Architecture, Modelling with Time Dimensions, LSTM Network, Recursive Neural Network: Network Architecture, Varieties of Recursive Neural Networks	
	Activities: Discussion of role of CNN, RNN in Machine Learning. Assignment based learning for Concept of convolution and need for Pooling, Implementation of CNN and RNN with Tensor Flow	
III 16 Hours	Matching Deep network for Right Problem, Modelling text Data with RNN, Implementation of LSTM and GRU layer. Generative RNN, Using RNN dropout to fight Overfitting. Using Bi-directional RNNs, Using Regularisation Modelling Sequencing Data Using RNN. Training and evaluation of Model, Large Language Models: BERT and GPT.	CLO3, CLO4
	Activities: Implementation of algorithms and assignment based learning.	
IV 15 Hours	Tunning CNN: CNN Architecture Patterns, Configuring Convolution Layers, Configuring Pooling Layers and Transfer Learning. Tunning RNN: Preparing Network input data and Input Layer, Output layer and Run Output Layer, Training the Network, Common Issues with LSTM, Padding and Masking, Scoring with Masking. LLM architecture: Introduction, Architecture, Categories(Encoder only, decoder only, encoder-decoder) Vector Auto regressive models, Implementation and Application of Different Models Using Hugging face Libraries.	CLO4
	Activities: Implementation and solution of CNN and RNN, case study of recent trends in Deep Learning.	

Transactional Modes:

- Lecture

Course Code: MCBS.539L
Course Title: Cyber Threat Intelligence
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

The objective of this course is to introduce students to explain the cyber threats and cyber threat intelligence requirements. Classify cyber threat information and examine the potential for incidents and, provide more thoughtful responses.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Describe different Cyber Threat.

CLO2: Explain technique to Develop Cyber Threat Intelligence Requirements.

CLO3: Analyze and Disseminate Cyber Threat Intelligence.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 16 Hours	Defining Cyber Threat Intelligence: The Need for Cyber Threat Intelligence: The menace of targeted attacks, the monitor-and-respond strategy, Why the strategy is failing, Cyber Threat Intelligence Defined, Key Characteristics: Adversary based, Risk focused, Process oriented, Tailored for diverse consumers, The Benefits of Cyber Threat Intelligence	CLO1
	Activities: Case Study and Group Discussion.	
II 14 Hours	Developing Cyber Threat Intelligence Requirements: Assets That Must Be Prioritized: Personal information, Intellectual property, Confidential business information, Credentials and IT systems information, Operational systems. Adversaries: Cybercriminals, Competitors and cyber espionage agents, Hacktivists. Intelligence Consumers: Tactical users, Operational users, Strategic users	CLO2
	Activities: Case study of real time social media cases.	
III 14 Hours	Collecting Cyber Threat Information: Level 1: Threat Indicators, File hashes and reputation data, Technical sources: honeypots and scanners, Industry sources: malware and reputation feeds. Level 2: Threat Data Feeds, Cyber threat statistics, reports, and surveys, Malware analysis. Level 3: Strategic Cyber Threat Intelligence, Monitoring the underground, Motivation and intentions, Tactics, techniques, and procedures. Analysing and Disseminating Cyber Threat Intelligence: Information versus Intelligence, Validation and Prioritization: Risk scores, Tags for context, Human assessment.	CLO3

	Interpretation and Analysis: Reports, Analyst skills, Intelligence platform, Customization. Dissemination: Automated feeds and APIs, Searchable knowledge base, Tailored reports.	
	Activities: Case study of real time social media cases.	
IV 16 Hours	Selecting the Right Cyber Threat Intelligence Partner: Types of Partners: Providers of threat indicators, Providers of threat data feeds, Providers of comprehensive cyber threat intelligence. Important Selection Criteria: Global and cultural reach, Historical data and knowledge, Range of intelligence deliverables, APIs and integrations, Intelligence platform, knowledge base, and portal, Client services, Access to experts. Intelligence-driven Security.	CLO3
	Activities: Flip Learning with Case studies of above concepts.	

Transactional Modes:

- Lecture cum Demonstration
- Cooperative learning
- Flipped classroom
- Self-Learning
- Online Teaching Tools

Course Title: Cost Management of Engineering Projects

Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives

This course provides students with skills and knowledge of cost management of engineering projects. The course will enable students to understand the key components of engineering project.

Course Learning Outcomes:

After the completion of the course the students will be able to

CLO1: Employ their knowledge and skills together to understand the basics of a successful project.

CLO2: Explain the cost behaviour and profit planning.

CLO3: Compare various quantitative methods for cost management.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 16 Hours	Introduction and Overview of the Strategic Cost Management Process Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.	CLO1
	Activities: Numerical Example for above concepts.	
II 14 Hours	Project: meaning, Different types, why to manage, cost overruns centers, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process.	CLO1 CLO2
	Activities: Case study of IT Companies.	
III 14 Hours	Cost Behaviour and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis. Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise	CLO-3

	Resource Planning, Total Quality Management and Theory of constraints.	
	Activities: Case study and Numerical example to understand the above theory.	
IV 16 Hours	Activity-Based Cost Management, Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control; Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing. Quantitative techniques for cost management, Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.	CLO-4
	Activities: Case study and Numerical Example for better understanding.	

Transactional Modes:

- Lecture
- E-tutorial
- Problem Solving
- Self-Learning
- Online Teaching Tools

Course Code: MCST. 546L

Course Title: TinyML and MLOps

Total Hours: 60

Course Objectives:

By the end of this course, students will demonstrate the ability to: Deploy TinyML models on power and performance-constrained devices to solve real-world problems. Implement machine learning algorithms, including k-means clustering, regression, classification, and ensemble methods. Utilize Python libraries - NumPy, Pandas, Seaborn, and Scikit-learn. Utilize TensorFlow for deep learning and TensorFlow Lite (TFLite) for TinyML. Utilize the C language for deploying TinyML on Embedded Systems. This course will also give students a comprehensive understanding of Machine Learning Operations (MLOps). The course will cover various aspects of MLOps, including model development, model deployment, and monitoring.

Course Learning Outcomes:

After the completion of the course the students will be able to

CLO1: Understand the basics of TinyML and the current landscape of its applications and challenges

CLO2: Utilize TensorFlow for deep learning and TensorFlow Lite (TFLite) for TinyML.

CLO3: Deploy TinyML models on power and performance-constrained devices to solve real-world problems.

CLO4: Design and automate modular ML pipelines and workflows using various tools

CLO5: Apply data management, feature stores, and CI/CD practices using appropriate tools to develop reproducible and automated machine learning workflows.

Units/Hour s	Contents	Mapping with Course Learning Outcome
I 15 Hours	Introduction to TinyML TinyML Landscape, Applications, and Challenges ○ TinyML Lifecycle and Workflow ○ Model Compression Techniques ○ ML Background: ML Algorithms, Neural Networks ○ Fundamentals of ML and TinyML: ○ Pruning ML models ○ Quantization Aware Training (QAT) and Post Training Quantization (PTQ) ○ Knowledge Distillation ○ Tiny Deep Learning ○ TensorFlow Lite (TFLite) for TinyML.	CLO1
	Activities: Numerical Example for above concepts	

II 15 Hours	Deploy TinyML models TinyML for Anomaly Detection: ○ Background on Anomaly Detection ○ Real and Synthetic Datasets ○ Unsupervised Learning ○ Threshold Choice ○ Model Training, Evaluation Metrics, and Deployment. TinyML for Predictive Maintenance: ○ Background on Predictive Maintenance Solutions and Industry Applications ○ Sensors, Sensor Data, and Interface ○ Accelerometer, Gyroscope, Barometer ○ TinyML Framework for Predictive Maintenance ○ Model Training, Evaluation Metrics, and Deployment.	CLO1,CLO 2
	Activities: Case study of IT Companies	
III 15 Hours	MLOps and its significance: Key challenges in deploying and managing ML models in production, Comparison of traditional software development, DevOps, and MLOps, Key components of MLOps, MLOps workflow, Landscape of MLOps tools and technologies.	CLO3
	Activities: Case study and Numerical example to understand the above theory.	
IV 15 Hours	ML Pipelines & Data Management ML Pipelines & Data Management: Overview of data engineering tools and practices, Data management for ML models, ML pipeline automation. Data Version Control (DVC) overview. Data Management: Feature Stores. Motivation, role in ML and Generative AI applications, and benefits for MLOps. Feast overview. CI/CD for ML Models: Use of version control systems like Git for model development, automated testing & validation, model delivery strategies.	CLO4
	Activities: Case study and Numerical Example for better understanding.

Course Title: Cyber Law

Total Hours: 60

4	0	0	4
---	---	---	---

Course Objectives:

The outcome of this course is to provide knowledge about the basic information on IT Act and Cyber law as well as the legislative and judicial development in the area.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Analyse fundamentals of Cyber Law.

CLO2: Discuss IT Act & its Amendments.

CLO3: Relate Cyber laws with security incidents.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 13 Hours	Concept of Cyberspace, Issues of Jurisdiction in Cyberspace: Jurisdiction Principles under International law, Jurisdiction in different states, Position in India. Conflict of Laws in Cyberspace, International Efforts for harmonization Privacy in Cyberspace.	CLO1
	Activities: Case Studies on Jurisdiction	
II 15 Hours	Electronic Commerce, Cyber Contract, Intellectual Property Rights and Cyber Laws. UNCITRAL Model Law, Digital Signature and Digital Signature Certificates, E-Governance and Records.	CLO2
	Activities: Brainstorming Sessions on Significance of UNCITRAL in day to day life of a common man.	
III 17 Hours	Define Crime, <i>Mens Rea</i> , Crime in Context of Internet, Types of Cyber Crime, Computing Damage in Internet Crime, Offences under IPC (Indian Penal Code, 1860), Offences & Penalties under IT Act 2000, IT Act Amendments, Investigation & adjudication issues, Digital Evidence.	CLO2 CLO3
	Activities: Assignment based learning, Demonstration of Entanglement and Non-locality through animated videos.	
IV 15 Hours	Obscenity and Pornography, Internet and potential of Obscenity, International and National Instruments on Obscenity & Pornography, Child Pornography, Important Case Studies.	CLO3
	Activities: Exercises and problem solving skills on cybercrimes.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Title: Software Metrics
Total Hours: 60

L	T	P	Cr
4	0	0	4

Course Objectives:

Understand the underlying concepts, principles and practices in Software Measurements.
 Designing of Metrics model for software quality prediction and reliability.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Explain the role of software Metrics in Industry size software

CLO2: Prepare empirical investigation of software for a quality measurement

CLO3: Examine software reliability and problem solving by designing and selecting software reliability models.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 15 Hours	Overview of Software Metrics: Measurement in Software Engineering, Scope of Software Metrics, Measurement and Models Meaningfulness in measurement, Measurement quality, Measurement process, Scale, Measurement validation, Object-oriented measurements. Goal based framework for software measurement: Software measure classification, Goal-Question-Metrics(GQM) and Goal-Question-Indicator-Metrics (GQIM), Applications of GQM and GQIM.	CLO1
	Activities: Case study and Group Discussion on OO methodology.	
II 16 Hours	Empirical Investigation: Software engineering investigation, Investigation principles, Investigation techniques, Planning Formal experiments, Case Studies for Empirical investigations. Object-oriented metrics: Object-Oriented measurement concepts, Basic metrics for OO systems, OO analysis and design metrics, Metrics for productivity measurement, Metrics for OO software quality.	CLO1 CLO2
	Activities: Case study with Understand and Metrics Tools.	
III 16 Hours	Measuring Internal Product attributes: Software Size, Length, reuse, Functionality, Complexity, Software structural measurement, Control flow structure, Cyclomatic Complexity, Data flow and data structure attributes Architectural measurement. Measuring External Product attributes: Software Quality Measurements, Aspects of Quality Measurements, Maintainability Measurements, Usability and Security Measurements.	CLO2

	Activities: Case study with Bugzilla and JEERA tools.	
IV 13 Hours	Measuring software Reliability: Concepts and definitions, Software reliability models and metrics, Fundamentals of software reliability engineering (SRE), Reliability management model.	CLO3
	Activities: Case study with Bugzilla and JEERA tools.	

Transactional Modes:

- Lecture cum Demonstration
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

Course Code: MCBS.541P

Course Title: Biometric Security-Lab

Total Hours: 30

L	T	P	Cr
0	0	2	1

Course Objectives

This lab course aims to provide students with hands-on experience in implementing biometric security systems using various modalities such as fingerprint, face, and voice recognition. It focuses on developing practical skills in biometric data acquisition, preprocessing, feature extraction, and performance evaluation.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Implement and analyse different biometric authentication techniques using appropriate tools and libraries.

CLO2: Evaluate biometric systems using standard performance metrics and recommend suitable methods for specific applications.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual
2. Jain, A. K., Ross, A., & Prabhakar, S. (2004). *An Introduction to Biometric Recognition*. IEEE Transactions on Circuits and Systems for Video Technology.
3. Maltoni, D., Maio, D., Jain, A. K., & Prabhakar, S. (2009). *Handbook of Fingerprint Recognition*. Springer.

Course Code: MCBS.542P

Course Title: Data Warehousing and Data Mining-Lab

L	T	P	Cr
0	0	2	1

Total Hours: 30

Course Objectives

This lab course is designed to equip students with practical skills in data warehousing and data mining techniques. It focuses on data preprocessing, OLAP operations, and the implementation of various data mining algorithms for classification, clustering, and association rule mining.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Implement core data mining techniques such as classification, clustering, and association rule mining using appropriate tools.

CLO2: Design and query data warehouses using OLAP operations and perform data preprocessing for mining tasks.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual
2. Han, J., Pei, J., & Kamber, M. (2011). *Data Mining: Concepts and Techniques* (3rd ed.). Morgan Kaufmann.
3. Inmon, W. H. (2005). *Building the Data Warehouse* (4th ed.). Wiley.

Course Code: MCBS.543P

Course Title: Security Auditing and Risk Management-Lab

L	T	P	Cr
0	0	2	1

Total Hours: 30

Course Objectives

This lab is designed to develop hands-on skills in performing security audits and managing IT-related risks. Students will learn to use tools and frameworks for system auditing, vulnerability assessment, and risk analysis.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Conduct security audits using relevant tools and interpret the results for system improvement.

CLO2: Identify potential risks and apply appropriate risk management strategies to mitigate vulnerabilities.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual
2. Whitman, M. E., & Mattord, H. J. (2018). *Principles of Information Security* (6th ed.). Cengage Learning.
3. Krutz, R. L., & Vines, R. D. (2007). *The CISSP Prep Guide: Mastering the Ten Domains of Computer Security*. Wiley

Course Code: MCBS.544P

Course Title: Mobile security and services-Lab

L	T	P	Cr
0	0	2	1

Total Hours: 30

Course Objectives

This lab aims to provide hands-on experience in securing mobile platforms and developing secure mobile services. It focuses on mobile app security, authentication mechanisms, and secure data transmission.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Analyze and implement security mechanisms in mobile applications to prevent data breaches and unauthorized access.

CLO2: Evaluate threats in mobile environments and apply secure coding practices and tools to safeguard mobile services.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual
2. Enck, W. (Ed.). (2020). *Mobile Security and Privacy: Advances, Challenges and Future Research Directions*. Syngress.
3. Stryker, R. (2019). *Android Security Internals: An In-Depth Guide to Android's Security Architecture*. No Starch Press.

Course Code: MCST.545P

Course Title: Deep learning -Lab

L	T	P	Cr
0	0	2	1

Total Hours: 30

Course Objectives

This lab course is designed to provide practical exposure to deep learning models and frameworks. It emphasizes neural network implementation, model training, and performance evaluation using real-world datasets.

Course Learning Outcomes:

After completion of course, students would be able to:

CLO1: Implement and train deep learning models such as CNNs and RNNs using frameworks like TensorFlow or PyTorch.

CLO2: Analyze the performance of deep learning models and apply tuning techniques for improved accuracy and generalization.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual
2. Goodfellow, I., Bengio, Y., & Courville, A. (2016). *Deep Learning*. MIT Press.
3. Géron, A. (2022). *Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow* (3rd ed.). O'Reilly Media.

Course Code: MCST.547P

Course Title: TinyML and MLOps Lab

L	T	P	Cr
0	0	2	1

Total Hours: 30

Course Objectives:

By the end of this laboratory, students will be able to implement and deploy TinyML models on resource-constrained devices using Python, TensorFlow etc. The course also introduces key MLOps practices, including model development, deployment, and monitoring.

Course Learning Outcomes:

After completion of the course, students would be able to:

CLO1: Apply TinyML concepts by developing and deploying models using TensorFlow and TFLite on resource-constrained devices.

CLO2: Design and implement ML pipelines using data management, feature stores, and CI/CD tools.

Lab Assignments

Practical will be based on as per the Teaching Learning in the Theory Class.

Lab Evaluation:

The criteria for evaluation of lab will be based on following parameters:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Suggested Readings:

1. Lab Manual

Course Code: MCBSP.599-1P

Course Title: Dissertation Part I

L	T	P	Cr
0	0	20	10

Course Objectives:

The student shall have to write his/ her synopsis including an extensive review of literature with simultaneous identification of scientifically sound (and achievable) objectives backed by a

comprehensive and detailed methodology. The students shall also present their synopsis to the synopsis approval committee. The second objective of Dissertation would be to ensure that the student learns the nuances of the scientific research. Herein the student shall have to carry out the activities/experiments to be completed during Dissertation (as mentioned in the synopsis).

Course Outcomes

CLO1: The students would present their work to the Evaluation Committee (constituted as per the university rules).

Value Added Course (SEMESTER-III)
(For other departments only as per the availability of faculty)

Course Code: MCST.511L

Course Title: Basics of Machine Learning

Total Hours: 30

L	T	P	Cr
2	0	0	2

Course Objectives:

The objective of this course is to develop a strong understanding of the issues and challenges associated with machine learning. It aims to provide students with insights into the strengths and limitations of various popular machine learning approaches. The course also focuses on enabling students to apply appropriate machine learning techniques for effective data handling and knowledge extraction. Furthermore, it equips learners with the skills to evaluate the performance of algorithms and design solutions for real-world applications.

Course Learning Outcomes:

At the end of this course, students will be able to:

CLO1: Recognize the characteristics of machine learning strategies

CLO2: Pre-process the data before applying to any real-world problem and can evaluate its performance

CLO3: Apply various supervised learning methods to appropriate problems

CLO4: Identify and integrate more than one technique to enhance the performance of learning.

Units/Hours	Contents/ Activities	Mapping with Course Learning Outcome
Unit I 8Hours	Introduction: Brief Introduction to Machine Learning, History and background of History and background of AI and ML, Comparison of AI, ML and DL, Supervised Learning, Unsupervised Learning, Reinforcement Learning, Examples of various Learning Paradigms	CLO 1
	Learning Activities: Assignment based learning	
Unit II 7 Hours	Python Ecosystem for ML: Data loading for ML Projects, understanding data with Statistics, Understanding data with visualization, Pre-processing and feature extraction	CLO 2
	Learning Activities: Implementation & demonstration	
Unit III 8 Hours	Machine Learning patterns Introduction: - Classification (Linear Regression, Logistic Regression, Support Vector Machine, Naïve Bayes, Decision Tree, Random Forest) Clustering.	CLO 3
	Learning Activities: Real time examples and implementation.	

Unit IV 7 Hours	Recent Trends: Recent Trends and Applications of Machine Learning in different fields.	CLO 4
	Learning Activities: Presentations	

Transactional Modes:

- Lecture
- Blended Learning
- E-tutorial
- Self-Learning
- Online Teaching Tools

Suggested Readings:

Course Code: MCBS.511L

Course Title: Report writing using LaTeX

Total Hours: 32

L	T	P	Cr
2	0	0	2

Course Objectives:

The objective of this course is to equip students with the fundamental knowledge and practical skills required to create professional and structured documents using LaTeX. It aims to familiarize students with the basic commands and environments in LaTeX, enabling them to write articles, reports, theses, and other academic or technical documents. The course also focuses on building the capability to script various types of documents and integrate elements such as tables, figures, equations, and references. Additionally, it encourages the development of problem-solving skills to debug and troubleshoot LaTeX compilation issues effectively.

Course Learning Outcomes:

After the completion of course, participants will be able to:

CLO1: Use the basic commands in Latex.

CLO2: Develop scripts in Latex for different type of documents.

CLO3: Illustrate troubleshooting in the latex scripts.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 8 Hours	Latex Introduction: Installing and setting Latex environment in Windows and Linux. Document Structure: Essential in preparing the structure of documents, Creating Titles at different levels, Sections, Labelling and preparing Table of Contents.	CLO-1
	Activities: Live Demonstration of LaTeX scripts. Assignment to write the LaTeX scripts.	
II 8 Hours	Formatting Text: Font Effects, Colored Text, Font Size, Bullets and lists, Comments, Spacing and Special Characters.	CLO-1 CLO-2
	Activities: Live Demonstration of LaTeX scripts. Assignment to write the LaTeX scripts.	
III 8 Hours	Tables: Working with tables, Styles, Borders, Wrapping, Inserting new rows columns and caption of Tables. Figures: Working with Figures, Formatting of Figures, caption, Alignment and wrapping Text around figures.	CLO-1 CLO-2
	Activities: Live Demonstration of LaTeX script. Assignment to write the LaTeX scripts.	

IV 8 Hours	Equation: Inserting Equation, Mathematical Symbols, Fractions, Roots, Sums & Integrals and Greek Letters. References: BibTeX File, Inserting the bibliography, Citing References, Styles of References	CLO-1, CLO-2 CLO-3
	Activities: Live Demonstration of LaTeX scripts. Assignment to write the LaTeX scripts.	

Transactional Modes:

- Lecture
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

3. Kotwiz. S. (2015). Latex Cook Book. United Kingdom: Packt Publishing Lmt.
4. Nicola Louise Cecilia Talbot. (2013). Using LaTeX to Write a PhD Thesis, Dickimaw Books.
5. Research Articles from SCI & Scopus indexed Journals.

Course Code: MCST.512L
Course Title: AI for Education
Total Hours: 30

L	T	P	Cr
2	0	0	2

Course

This course aims to familiarize students and educators with Artificial Intelligence (AI) tools that enhance teaching, learning, and research practices. It provides hands-on experience with AI-powered applications for content creation, personalized learning, assessment, academic writing, and research productivity. The course encourages ethical and effective integration of AI into academic environments while promoting critical thinking about the use and limitations of AI in education.

Objectives:

Course Learning Outcomes:

After the completion of course, participants will be able to:

- CLO1: Understand the fundamentals of AI and its relevance in the education sector.
- CLO2: Use AI tools for teaching support, student engagement, and content creation.
- CLO3: Employ AI-driven platforms for academic writing, citation management, and research enhancement.
- CLO4: Apply AI-based tools for assessment, feedback, and personalization of learning.
- CLO5: Evaluate ethical and responsible use of AI in education.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 08 Hours	Introduction to AI in Education (Theory + Demo) Overview of AI and Machine Learning concepts, Role of AI in modern education systems, Use cases of AI for teachers, students, and researchers, Types of AI tools: Generative AI, Predictive AI, and Analytical AI, Responsible and ethical use of AI in academics	CLO1, CLO5
	Activities: Live demonstration of AI use cases in education, Assignment on identifying 5 AI tools with academic use cases	
II 08 Hours	AI Tools for Teaching and Learning Content creation tools: ChatGPT, Copilot, Canva AI, Tome AI, Lecture generation & presentation tools: Gamma, SlidesAI, AI tools for student engagement: Mentimeter, Curipod, EdPuzzle, ClassPoint, Personalized learning apps: Scribehow, Diffit, MagicSchool.ai , AI-driven LMS integrations and virtual assistants	CLO2, CLO4, CLO5

	Activities: Live demonstration of AI tools for lesson planning and student engagement, Assignment to design a 3-slide AI-generated micro lesson with quiz	
III 08 Hours	AI Tools for Students and Academic Writing Note-taking tools: Otter.ai, Notion AI, Grammar and writing enhancement: Grammarly, Quillbot, Hemingway, Summarization and reading tools: Scholarcy, TLDRthis, Reference and citation: EndNote, Zotero, Mendeley (with AI plugins), Avoiding plagiarism and responsible AI use in writing	CLO3, CLO5
	Activities: Live demonstration of AI tools for writing and referencing, Assignment to write an academic paragraph using AI tools with proper citations	
IV 08 Hours	AI for Research and Assessment Literature review tools: Elicit, Research Rabbit, Connected Papers, Data analysis and visualization: ChatGPT Code Interpreter, SciSpace, Wolfram Alpha, Assessment generation: QuestionWell, Testportal, Formative, Feedback tools and rubrics generation using AI, Limitations and biases in AI tools for research and evaluation, Introduction to Prompt Engineering.	CLO3, CLO4, CLO5
	Activities: Live demonstration of AI tools for research and assessment, Assignment to create a mini research workflow using two or more AI tools	

Transactional Modes:

- Lecture
- Peer Learning/Teaching
- E-tutorial
- Self-Learning
- Online Teaching Tools

SEMESTER –IV

Course Code: MCBS.599-2P

Course Title: Dissertation Part-II

L	T	P	Cr
0	0	32	16

Course Objectives:

In Dissertation the student shall have to carry out the activities/ experiments to be completed during Dissertation (as mentioned in the synopsis).

Course Learning Outcomes:

The students would present their work to the evaluation Committee (constituted as per the university rules).

One research paper (either communicated to a Journal or accepted/ presented/published in a conference proceedings) out of the dissertation research work is compulsory. The Evaluation criteria shall be as detailed below:

Evaluation By	Maximum Marks	Evaluation Criteria
External expert, HoD and senior-most faculty of the department	50	Dissertation report (30), presentation (10), final viva-voce (10)
Supervisor	50	Continuous assessment (regularity in work, mid-term evaluation) dissertation report, presentation, final viva-voce
Total	100
